Well then use PACTOR II with those symbols. PACTOR II will
get through when CW fails.

Any rational evaluation of the modes available will show that there is a
combination of circumstances that make a specific mode the one that will
"get through". One can "prove" that their favorite mode is the one that
will get through under certain conditions.

I have seen PACTOR II get through from Europe with 10 watts
when there was no humanly detectable signal. All I did was
choose the correct frequency and time based on a schedule.
I detected absolutely no carrier on the S-meter or with
my ears in CW mode. The PACTOR II signal was literally
down in the noise but my SCS PTC-IIe somehow managed
to dig it out.

It may be similar to the built-in speech processor that they used in their DSB-100 transmitter back in the early 1960s. If so, that unit, as you describe it, was quite effective for its day.

Dee, please go back and re-read Silent Key's original post and my response.
I was reacting ONLY to that one person's remarks. I was actually
narrow-brushing.

While I'm an officer in just one club, I am in three and none of them have
any crummy people -- and I certainly agree with you that many amateurs don't
jab the techs. In fact, I encounter practically total acceptance. That's
why Silent Key stood out.

With regard to can/can't learn, I have the most problems with the characters
that are four or more elements long. dit-dah-dah-dit and dah-dit-dit-dah
are different, but I can't tell you what they are. I think one of them is

"P" because I remember the symmetry.

Transcribing is not the problem. If I hear dit-dah, I can write A. But if I hear dit-dah-dah-dah-dah or dah-dit-dit-dit-dit, I don't know what to write, because I don't know what those are. I cannot store the memory of what those sounds mean. Since you (apparently) don't have the problem, you won't relate.

And it isn't a lack of time or effort. I have been at this since 1993. Many methods. No appreciable successes. (I did get "D" from "dog-did-it" and "Q" from "pay-day-to-day" -- a couple of real triumphs, eh? [sarcasm intended])

This is no picnic. Thanks for understanding.

73,
"Sal"

Amen!

I used to be a staunch defender of CW. We lost the 20, we lost the 13, we are going to lose the 5.

In today's age of materialism, self created rights and the liberal ideals of fairness, I'm just waiting for the removal of all testing requirments.

Just show up, mark A, B, C or D on 10 questions (no grading, just turn it in) and then get a certificate of attendance, a blue ribbon that says 1st place and a 1x2 vanity call sign.

Guy

That is correct. Let's just take a very simple example. PSK is one of our
newest digital modes. When there are auroral disturbances, PSK cannot be
used. The phase shifts induced by the auroral activity make it impossible
for the computer to read. These phase shifts effect all the modes. Modes
that depend on phase shifts (such as PSK) are affected the most severely and
quickly become unusable. On the other hand, CW takes on a buzzy, raspy
sound but a human operator can still decipher it although a computer will
fail. I have personally experienced these conditions. If the auroral
induced phase shifts aren't too severe even SSB will get through when PSK
has failed. I have also personally experienced this.

Let's take another. This time packet. Packet has nearly died out on HF because it is not robust enough. Conditions have to be almost perfect for there to be a usable packet signal. Even low levels of atmospheric static make it unusable. Slight fading also causes problems. Yet voice, CW, PSK, and RTTY will all cope with conditions that can make unusable.

Each mode has its strengths and weaknesses. For each mode, there are conditions for which it will be the best choice and conditions for which it will be the worst choice. If a person wants to maximize their communication capabilities, they need to become conversant with each mode, its characteristics, and what affects its propagation. For CW, this should include learning to copy by ear. Under some conditions, the human brain is the only computer powerful enough to decipher it.

If you were in this area, I would be more than happy to take a try at teaching you. The "dog-did-it" approach is one of the worst possible ones to use. It is like trying to count the dots and dashes. On longer letters it can be a problem.

For someone like yourself, it is absolutely essential that you eliminate any and all extra translation steps. The burst of sound should register directly as a letter. In other words, hear it as a letter and reflexively write a letter. Then it doesn't matter if you happen to know the actual number of dots and dashes. No counting, no "dog did it", no "helpful" memory devices at all. They will only hinder someone like yourself.

> This is no picnic. Thanks for understanding.
>

Well I just wish that I could take a stab at teaching you. There is always a sense of accomplishment in expanding your abilities in ham radio. For example, in the past couple of years, I've been exploring the digital modes and VHF/UHF propagation. It's a hoot to work Texas on 2m from here in Michigan.

********** REPLY SEPARATOR **********

Complete nonsense. CW testing is being phased out because CW is
becoming obsolete, period. Don't try to read anything more into it
than that.

With all the great new digital modes available - most of which are far
superior to CW - forcing people to waste valuable hours learning an
obsolete mode is sheer folly. There are so many great things to do
with Amateur Radio. Do them!

Quite correct Bill. Commercial and military have dropped Morse code
for the very reasons you stated.

In this day and age, requiring proficiency in Morse code for a radio
license would be as requiring proficiency in horse husbandry in order
to get a driver's license.

OK folks. All I hear is whining about how things are changing. So
I'll ask the question again.

If you really believe that morse code is an important way to
communicate that should be preserved then you need to convince other
hams and potential hams to learn the code. You need to convince enough

hams to use code so its very usage generates excitement and makes
people want to join in the fun. Almost self-perpetuating like it was
in the 1950's.

Preaching (or complaining) to the choir on the radio fora about the
abysmal state of things will not add one person to the ranks of key
pounding hams.

So what are you going to do to increase the number of code practicing
hams.

********** REPLY SEPARATOR **********

Don't you find it odd that people need to be "convinced" to use morse?
Nobody needs to be "convinced" to use PSK31, RTTY, SSB, FM or even AM.

Life is too short to waste it "convincing" people to use a mode they
are instinctively not interested in.

The underlying problem is you want things to be like they were back in
the '50s. Well, I was licensed in 1957 and I had fun back then too,
but time marches on. Try marching along with it.

Actually if you go back and re-read the entire message I think that
between the lines you might pick up that I think these guys are living
in the past. CW is all but dead and buried. All professional users of
consequence have abandoned it.

I have the same problem with the code. My brain wants to identify or
count the dit/dahs and then translate them into the character. Learning
each character as a quick burst of sound, as if it were sent at an
equivalent speed of perhaps 20-wpm, is probably the best method.
I never got beyond about 10-wpm after practicing on and off for many
years, sometimes for months at a time. I used to listen to the code
practice transmissions on W1AW every night. If the 'General' code
requirement had been 3-wpm less, I might have been a ham' decades ago
but I wanted HF phone privileges or nothing (stubborn me). I didn't have
any interest in getting a Technician license or being a Novice until it
expired because of my code limitations. I don't think learning the code
has much to do with intelligence or even motivation to a certain extent.
Some folks are just not wired for code. I could have passed the Extra
exam' in the days before the questions were available to be memorized
but that 20-wpm was the problem. I tell myself it was amateur radio's
loss. :-)

In the olden days, the purpose was well understood. It was, and still is, to become proficient in one or more aspects of radio communication, to provide a skilled base of technically proficient people who pursue an interest in some aspect of radio communication technology and art for personal gain without any financial interest, reward or compensation from the activity.

It is NOT to open a box, plug it in, connect a wire, and, when it doesn't work, get on the internet and ask for help.

I advocate for a code test for the following reason. I value what I have to plan for, work for, sacrifice for, and invest my time for.

I value the reward for 18 months of practicing Morse Code every night for one hour a night. That's an investment.

I value the reward of studying, really studying, to understand the electronics for my Technician License. That's an investment.

I value the reward of studying, really studying, to understand the electronics for my General License. That's an investment.

I value the reward of studying, really studying, to understand the electronics for my Advanced License. That's an investment.

I value the reward of studying, really studying, to understand the electronics for my Extra License. That's an investment.

It took me 45 years to progress from Novice to Extra. [Note: I was 25 wpm CW proficient in the 1960s. Marriage, Family, Profession took priority over Ham Radio.]

I teach Ham Radio classes. I'm a registered ARRL instructor. I'm not invited to teach too often in these days. I DO NOT teach Q&A. I WILL NOT teach Q&A. I teach understanding of what's behind the Q&A.

My Technician classes begin with ELEMENT 1. It takes 3 to 4 weeks at two hours a week for classes to pass Element 1. It takes 10 to 12 additional

weeks of a two hour class one night a week plus homework to pass the Technician exam.

Those who choose this path have made an investment of their time and effort. I hope they value that investment.

I WILL NOT support a 4 hour session on a Saturday morning and hooray! You are now a ham!!!

BTW, FWIW, I'm still learning from the skills and experiences of Roy, Cecil, Rick, et al on the antenna n.g.

/S/ Dave, W1MCE

You could have shortened that up considerably. Short version: "I did it so
everyone else should have to". See how easy that was? Not an original idea
though.

I have a 22-year old Icom 02-AT that has worked reliably until now, when it ceased putting out any transmitter power whatsoever.

Shall I assume the obvious, that the final (amplifier) transistor has blown? (They're easy enough to replace in most radios.) Or is there something else that's known to fail in these (particular) radios that results in a loss of transmitter power?

And can anyone please tell me the part number of the power device used in the final amplifier? Thanx.

The only problem with the EEs that I run across, is they know just enough to
get themselves hurt and/or burn their homes down when they try to work with
ELECTRICITY instead of electronics. It seems that at 240vac, all their
common sense goes out the window.

That is exactly the point I was trying to make. If one is content to turn
off the radio and not communicate at times when signals are distorted, then
various modes become less important. But I prefer to be able to communicate
as long as possible. Thus I consider it part of my goals as a ham to be as
conversant with as many modes as I can. I have setup and operated the

digital modes, including building my own sound card interface (even though I don't normally attempt soldering), just to gain experience in them even though I have no real interest in operating them per se. Pounding away at a keyboard is too much like the internet or my job.

To clarify, specify the conditions, and the "best mode" becomes evident. With distorted signals, CW wins with voice coming in second. With weak signals, some digital modes win with CW coming in second. For power consumption for a given signal strength, the digital modes come in last since you must have power to run the computer. And the power to run a computer alone (depending on the computer) is often more than enough to run a 100w CW or voice signal. So you add the digital signal and the digital modes become "power hogs."

Every mode has value.

Does it still receive correctly?

What usually happens, is the synthesizer quits, and it stops sending,
or receiving.

The output transistor is a T05 (TO39) type package, and is soldered to the
metal frame that surrounds the radio. It is very special, in that the case
of the transistor is connected to the emitter. Most transistors in that
package have the case connected to the collector. This is done so that they
could run the emitter grounded (as is usual) and not need any insulated
heatsinking hardware.

The usual way of blowing the output transistor in an 02AT is to use a battery
pack that supplies more than 9v, or to try and power the rig directly from
your car battery. ISTR that a short on the antenna is a third way.

Dave, W1MCE, BSEE [ElectriCAL Engineer]

Never worked as an electriCAL Engineer. Designed transistors for almost four years. Designed USAF Flight Line Test Equipment for six plus years. Designed USAF Computer Controlled Avionics Test Equipment for 10+ years. Spent 3 1/2 years as Field Engineer at Hill AFB, UTAH on Computer Equipment. Worked for 7 plus years on the Effects of Nuclear Weapons on USAF strategic assets. Spent part of three years at the Nuclear UGT facility in Nevada. Spent 6 plus years as Chief Engineer on the USAF MX Missile RS/RV. Finished up as System Engineer on the RF Subsystem Force Modernization for the MK21 RV. In between, I managed the Strategic Product Design, Electronic Department for three years, now retired.

I still have my text books on HV transformer design, Generator Design, Fluid Dynamics, Thermo Dynamics, three phase power distribution, etc. around here somewhere ... I hope.

My VP Engineering, to paraphrase his judgment, claimed: "Give me an Engineer with a good Physics background and a good Math background and I can put him/her to work anywhere. In three months [s]he will be blunder proof, in six months competent, in 12 months expert." After 30 plus years of engineering I conclude he was correct.

But, I've left BSEE behind me. I retired from my profession six years ago.

And, as my wife says; "You can take the engineer out of engineering; but, you can't take engineering out of the engineer." I'm still learning from highly gifted people like Roy, Cecil, Reg, etc.

I'm still practicing my Vocation ....

CW, you are incorrect. I VALUE my license because it took effort over many years. The issue is valuing your license because you invested time, talent and energy into obtaining it. The more you invest, the more you value.

If you read the full message you would conclude that the message is about investing and reward of investing. It is not about a 4 hour cram short term memory program that yields a Technician License without the KNOWLEDGE of how to build a 1/2 wavelength dipole with coax to connect to the new out of the box toy.

When I read posts regarding 'how to ...' on some basic aspect of Ham Radio I wonder about the training, education, understanding, that went into 'studying' for that license. IMO, the license should indicate a level of proficiency that, in many cases, is missing. When I hear an EXTRA CLASS ham on twenty meters asking someone what the difference is between USB and LSB, we have a problem in training and education.

I don't know if Ham Radio will degenerate into glorified CBers. But, for many it has become a hobby of appliance operators.

If you really believe that morse code is an important way to
communicate that should be preserved then you need to convince other
hams and potential hams to learn the code. You need to convince enough

hams to use code so its very usage generates excitement and makes
people want to join in the fun. Almost self-perpetuating like it was
in the 1950's.

Preaching (or complaining) to the choir on the radio fora about the
abysmal state of things will not add one person to the ranks of key
pounding hams.

So what are you going to do to increase the number of code practicing
hams.

CW is and might be around forever for identifiers in different things.
It can be transmitted along with voice and doesn't get in the way
of other things. Any loss would be the best fun I had during
my Amateur Radio Service and learning Radiotelegraph Second class
training. I even found a code chart at the RF desks at a NASA MSFN tracking
station when I worked there. Just in case!

Fascinating! We have here a perfect example of a functional illiterate
who was able to obtain a Ham license. Of course he would not like CW as
one must be able to spell, and construct simple sentences, which is
obviously beyond him.

> reference for that? (might be useful)

Whoever you are,
I believe you will find this in the book about the early days of amateur
radio. It is called something like "200 Meters and Down", or is it "Below".
ARRL has it and many ham stores do. I have a copy and have difficulty
remembering the exact title. A really nice read. I also have a 1932 ARRL
handbook and I think there are references to the "doom of the advent of CW"
in there also.

. You, of course, know about spark. The sparkies didn't like CW and, at
that time, the FCC __DID__ out law it (spark, that is).
I admit that it was a loaded question because CW stands for Continuous Wave
and what differentiates it from" Spark". Probably not what the troll wanted
and I know he/she/it wouldn't respond, but did it anyway.

> > Your fingers and eyes (or ears) aren't broke....

The FCC Outlawed 'Spark' for very valid technical reasons
at that time and they are still valid today. The very same
logic could be used to still justify the continued use of CW
as an Amateur Operating Mode; even though the requirement
for proficiency in CW is not used for an Amateur License.

My arguement for CW has never been from the perspective of getting more
ops. It's the quality of the operators I'm concerned about, not quantity.
A code requirement may mean someone will study the theory portion a
little more while they're building up their code.

One day, when you turn on your HF or VHF/UHF rig and it sounds like CB, you'll understand where I'm coming from.

I'm going to drop this agrument because it looks like I lost and people
really don't care anymore one way or the other, but I'll end it with just
couple questions to all;

What is one behavior on our ham bands that might or could make you loose
interest in ham radio and leave if you heard it or if it became previlent?

And does it seem like it's going that direction?

So, are you asking if people are getting rude, using foul language and don't seem to give a crap about each other? If so, yes, they are. The sure cure for that would be to increase the code requirement to 30 words per minute for general. Faster for extra. Along with that, NO license of any kind without an engineering degree. This all wouldn't do anything about lousy operators. What it would do is reduce the number of new hams. After a while, we would be down to 100 or so nationwide. The bands would get much better because there would be virtually no one using them. Something that you seem to have failed to consider is that society in general is adopting these traits you find objectionable. New hams tend to be more objectionable (under this criteria) than old. Is it because they didn't spend hours studying code? No, it's because they are products of the society they live in. Americans are known worldwide as pushy, arrogant, self centered bastards. There is a reason for that, they are.

My point was that few people here think beyond the dipole, quarter wave vertical, or shortened mobile vertical. And all of those for HF. The group is broad minded in many ways, but very narrow in others.

No license without an engineering degree would be fine by me. And
follow it by one that requires complete knowledge of the National
Traffic System. Which would be more inportant by far if you want to
keep the traditions up.

How many here know how to pass traffic properly? Bet I can draw a line
in time. And it had nothing to do with license class. I was a tech at
the time. But I learned how to pass traffic, and how to be net control
as part of the NTS. Because I had people on our local nets that
enforced the rules. On checking in, out, and passing traffic. Traffic
up into the system, and down to the final recipient.

That, my friends, was the difference. Not CW.

Oh, I think people think about them. They probably just don't talk
about
them as much. You think I'm stuck to HF? Wanna come look at my
latest 144 yagi that is nearly as long as the f/b width of my house?
"30 ft boom"
Seems I just commented about rat shack UHF antennas yesterday if I
remember right. I usually talk about what other people talk or ask
about..
To tell the truth, I'm about bored with the whole mess, and don't post
as
much about any kind of antennas as I used to. I've got so many sticks
in the fire
lately, ham radio is just one wee small area I mess with. And I'm
getting more and
more bored with it every year. I used to be able to do 55-60 wpm on CW
in the
late 80's.
But due to my lack of activity the past few years, I'm slipping down to
snail
pace CW. Now I can only do about 35-40 wpm, and it gets a bit slower
every
year. If you want to talk about different topics, it's up to you to
start them.
We can't read your mind on the internet...
MK

Maybe the OP was thinking of the older IC-2A. One of the battery packs for the 2A had a jack for connecting 12V to it, which allowed you to run the radio off the battery while it was being charged. Applying 12V directly to the radio (only possible by removing the battery pack) would fry it.

The IC-02A could run off 12-15V directly through a jack in the top plate.

At the risk of going off topic, I recall someone mentioning that the RS 2 meter portable had an issue almost the same. The jack at the top was "supposed" to be for "vehicular" power - but I heard horror stories of the radio suffering damage when used in just that fashion. IAnd I've seen first hand - a battery pack that got smoked using vehicular power. It almost caught the guy's car on fire since it was near "cloth". I haven't looked at either the radio or schematic for so long - I can't recall exactly what the make-up is. I have though - heard many tales of guys blowing out radios in a vehicle. Hell, our Fire Department Squad Truck radio went out twice in 3 months from similar issues. I'm not sure if they actually figured out the exact reason as yet - Motorola and the original installer were to look over the situation. Seems to me, we all need to take an extra step to prevent such things from happening, since we can't rely on the manufacturers to do so. Just my 2 cents.

OOPS! The 02AT is ok on 12V, the 2AT has a problem with above 9V.
Sorry for the confusion.

I had a 2AT battery pack catch fire when charging off of the car charger.
There was no fuse in the power cord, and a wire shorted inside the pack.
Poof! It ate the wires inside of the pack, and the power cord all the
way back to the lighter outlet. A fuse would have been a *really good thing*.

Speaking of leading to a good paying career, if you're going to learn a skill, how about learning typing instead of Morse? Get on RTTY or PSK31 or one of the other digital modes and develop a useful, saleable skill. There isn't an employer in the world today (except possibly the ARRL) who would be impressed that you know Morse, but lots would like it if you could type.

> pack that supplies more than 9v, or to try and power the rig directly from
> your car battery. ISTR that a short on the antenna is a third way.

...the jack on the top's supposed to have an internal regulator, and I've used it in my truck on occasion since the radio was new with no negative consequences (not like the HTX-202, which was made by Maxon under license by Icom for Radio Schlock, and had issues with its external power-jack).

Maybe infrequent long-winded transmissions over the last 22 years is the culprit for the transmitter's untimely demise? (It's kept my hands warm in the cool outdoors more than once.) I've long since misplaced (or

lost) the original manual, which had a schematic.

If I crack it open, I should be able to measure the voltages on the device, itself to see if it's blown. Right now, the final seems like the prime suspect. Thanx...

Yeah, I've had a few experiences myself, in years past that taught me
there's no such thing as too many fuses.

My glove-compartment has an assortment of fuses of varying vintages, all
acquired for that "rainy day" that some times never comes.

It would not surprise me much if the failures were due to a "load
dump" event.

If the alternator is running, and supplying a substantial amount of
current to a load (e.g. headlights), and the load is suddenly
disconnected (e.g. headlights turned off), it's not at all uncommon
for a very impressive voltage spike to be generated. This is due to
the same sort of inductive "kickback" which can occur when shutting
off the drive current to a motor or relay or solenoid.

My recollection is that the standard used in the automotive industry,
is that electronic devices on a "12-volt" automobile bus should be
designed to survive load-dump spikes of up to 50 volts. A radio
designed for 12 (or 13.8) volt operation, whose finals are fed
fairly directly from the battery supply, may work just fine if the
ignition is off, but could easily fail on its first load-dump event.

Some sort of fast-acting zener protection, followed by an RF choke,
would probably be a good idea when connecting such radios to an
automotive power system.

Unfortunately, a 50-volt load-dump spike could exceed the input-
to-output voltage-differential limit of common regulators such as an
LM317; hence, even if you're using a regulator of this sort to power a
radio intended for 9 volts, you'll probably need an upstream zener to
keep the regulator from popping.

Very (perhaps highly) plausible theory -- it's too bad that Icom didn't
learn from Motorola, and create an inexpensive (relatively to their
radio, anyway) vehicular charger for their radios (e.g. 'Convertacom'),
rather than a (potential) built-in self-destruct device.

Hi Dave,

The I was thinking of the 2AT when I penned my response. The 02AT
is quite different. The synthesizer is more integrated, and there
aren't nearly as many crystals as in the 2AT. I am not certain what
the 02AT did for a final.

Assuming it is the same as the 2AT, it is a fairly simple job. You do need a
high wattage soldering iron, so you can solder the transistor quickly.
You should be able to make a few measurements, and determine if the
final is popped.

-Chuck

ARRL threw principle out the window when they caved in to the demands of
the Lambda Amateur Radio Club (LARC). It was a sad day for me indeed when
I opened my beloved QST magazine and there on the pages were photos of
queers on a Tropical DXpedition, and in living color no less. The ARRL
wanted us to embrace a sick perverted lifestyle and be one big happy
family. To me, it was the spark that signaled the death of a once proud
organization, and it turned liberal.

I'll bet you try to pass yourself off as a Christian.... I guess you never
really learned some of the most important lessons.
The first lesson is to treat *EVERYBODY* with the same courtisy and respect
that you expect from them.

Welcome to my killfile.

Yup. I also had a 3A and had to be careful about that.

I know the Icom batteries I bought with and for the 02AT had a resetting
thermal fuse inside, wired in series with the pack. I used those batteries
with the 3AT; don't know if they originally had different batteries.

Yep, but that doesn't help much when the circuitry fails between the connector
and the thermal fuse. Besides, the thermal fuse would only open if the cells
in the pack got too hot... not the 24 gauge wire.

What I don't get is why we are forced to see
homosexuality in areas that have nothing to do with sex, such as the example
you mentioned.

>What is one behavior on our ham bands that might or could make you loose
>interest in ham radio and leave if you heard it or if it became previlent?

None. I have fairly thick skin, and I'm rarely bothered by anything
that
happens on the air. I do have a VFO ya know... IE: tuning knob for all
you without an EE... But like I say, I'm pretty bored lately, I don't
get
on the air near as much as I used to. The boredom has nothing to
do with the people on the air. It's from farting with the same basic
stuff
since I was in jr hi school... I don't get much thrill anymore.. Only
about
3 clicks above talking on a telephone. Which I hate btw... Ham radio
at the house is too easy. No challenge anymore.. I turn it on, and yak.

Wow...
If it wasn't for mobile/portable operating I would be about radio dead.
At least there is still some challenge in that area... IE: trying to
put out
a decent signal with shrimpy antennas, low power, etc..
Yea, I've tried all the digi crap too, before I get 90 people telling
me to
get with the modern techniques....PSK31, SSTV, etc, etc, ad nausium..
I'll do it for two weeks, and then the boredom sets in... I kinda got
into
SSTV, but PSK31 bores me to tears... Did I say I generally hate to
type...

>And does it seem like it's going that direction?

I see no difference from what it's been the last 20 years or so, except
there
are far fewer CW ops on the air lately. I tuned 40m CW the other night,
and
didn't hear a single QSO... And I'm talking the lower CW section, not
the
novice band.. But do I whine? Nope...Times is a changing, and there is
not much I can do about it. The argument that CW weeds all non hackers
is total BS... All it weeds out are the CW lazy, not the troublemakers.
A dedicated troublemaker will pass any tests needed if that's what it
takes to stir it. You should have heard 75m in the early -mid 80's...

All had to pass code tests in that period. 75m is actually cleaner
now,
than it was then. Mainly due to Hollingsworth cracking his whip a few
years ago.

Even more amazing is that no matter who starts the thread about CW, the
same group of people will post the same tired old reasons about why CW
is still a useful screening tool for prospective hams and how CW is
still an important way to communicate. And they do not want to hear
about the world as it really is in the 21st century.

If I had the time at the house, I would have invested more time and $$$ in
the shack that what I did in my service truck.

> Wow...
> If it wasn't for mobile/portable operating I would be about radio dead.

For the most part, I am only able to get on the air mobile from mid march
until after the first frost. I am a heating and a/c contractor in south
Mississippi....8am - 9pm work days, 5+ days a week doesn't leave much time
for anything else.

> At least there is still some challenge in that area... IE: trying to
> put out
> a decent signal with shrimpy antennas, low power, etc..

Not too much of a problem with enough money.... When I am on the road
between calls, if I want to talk, I am going to talk, even though most of
the time I am listening. Like I said earlier... I have more invested in the
mobile station in my service truck than I have in the shack.

> Yea, I've tried all the digi crap too, before I get 90 people telling

I spend too much time on the 'puter already, and FWIW, I was on packet in
'84 with a C-64, and a homebrew modem, and customized my own software for
it.

True again

> than it was then. Mainly due to Hollingsworth cracking his whip a few
> years ago.
> MK

I have been active recently with teaching a class for folks to get their
licenses and part of it is CW. Being here in south Mississippi and only
about 60 miles from the gulf coast, we are very aware of the communications
limitations and what works an what doesn't when the lights go out. CW is
only another weapon in our arsonal of communications tools......keep in mind
that not much works when there is *NO* infrastrucure left intact.

Icom never had a thing to do with the HTX-202. No license, design
etc. Radio Shack choose accessories that were popular and happened to
choose the Icom battery design. You are correct Maxon made the HTX-202
for Radio Shack.

I had many calls while working at Icom over that rumor Many wanted
Icom to repair the HTX-202. Icom America asked IJ if they were making
the HTX-202 and they said no but found out Maxon was building the
HTX-202. all water over the dam now.

It was true that Icom did private label the H and U-16 for Midland
Land Mobile for a while.

For isolated characters, a good ear could probably differentiate them
with 22 millisecond and 20 millisecond bit times (45.5? and 50 Baud).
I had a friend who said his uncle could do that.

But if the characters ran together, especially with a 1 or 2 bit stop
time, your brain would have no way to seperate them. Neither can some
simple hardware decoders.

I just passed my tech exam and am looking
forward to the CW test. It certainly exercises
a part of my brain that seems to need that
kind of excercise. I'm glad it's still a requirement.
It all seems to balance out.

Tnx for the reminder, I almost forgot.

As ham radio test standards have lowered over the years, I've noted a
marked increase in the amount of obscenity, profanity, and indecency.

At the same time the price of gasoline has gone up, the minimum wage has gone up, the stock market has gone up but in just about all areas of society mutual respect and courtesy have gone down.

I think it has very little if anything at all to do with Morse code.

When I was born (1-10-33) there were approximately 130,000,000 Americans. I think we are approaching 300,000,000 now. I'm still relatively polite, I think that may be why I get so many funny looks when I speak to folks. Poor as we were, I think I liked the 30s and early 40s a whole lot better. Main thing I've noticed about the more recent citizens Is that there have never been so many with such high self esteem and so little reason for it. (G) I'm a relatively recently licensed Ham (Tech-2002, Gen'l-2005) Had no real interest in CW but realized I had to pass the test to advance beyond the no-code Tech level (Besides, I figgered actually having passed even the elementary 5 WPM CW test would eventually be a prideful thing.)

I'm a couple decades younger than you (my mother was born in '33), but I
have sure seen a massive change in societal attitudes since I was young.
Used to be that people understood the concept of earning what they get out
of life, now everyone seems to think they're entitled to anything they want
for free. Kind of sad, really.

Yessum, I agree. I always hated to work, but I always understood that it was
something I had to do.
I was a high school dropout, but after I got out of the Army I picked up two
college degrees. I never really amounted to much, but did pretty well for a
dropout, even taught Industrial Arts in a Dallas Junior High
School for eleven years. Finished my working years as a Design Drafter (CAD)
for Halliburton.

What is sad is that in California they deny the Boy Scouts public park access, but it is OK for gays to have public sex in the same parks without fear of being arrested.

nobody is asking for free access to HF, I am not I am asking that
requireents for such acces be reasonable, with the decliene in the use
and import of CW over the years the CW test is not a reasonable
requirement, the same cane be said of othe rpeices of the written test
(like anybody realy needs to know whatfrequency is balck in a fastscan
signal (a UHF mode) in order to use HF spectrum is truly beyond me but
it does not rsie to the pass fail nature of the CW test

Thanks.

I'm trying out the shareware program "nucode"
right now. Is this a recommeded way to learn CW?
```

My long term plan is also to pass the General exam,
then build my own HF CW receiver, and then later
try transmitting low power to see how far I can
go on an empty tank.

Grow up? OK, even I am amused by that one.

Nevertheless, it is reasonable to expect that a technical forum representing
an amateur radio subject, have higher standards than cable TV language.

> other lower life form of radio hobbiest. You name it.
>
Let's use proper nomenclature. There is little danger of CW going away. What is going away is Morse Code - replaced by more efficient ways of comunication. We're always asked "What would you do is the only way you could communicate was to turn your transmitter on and off?". Simple! I'd use Tap Code - you know the "CW" with only dots, no dashes - the one used by banging on pipes, the one anybody can use without tons of practice. Arrange the alphabet in a 5 x 5 matrix leaving out K (use 'c' instead). Each letter is addressed by its position in the matrix: a = 1,1; b = 1,2 .... f = 2,1 and so on. These become your "dits" or bangs or flashes or blinks as appropriate. I'm amazed at how few know this.

why? or better what makes it higher?

to do so implies that it is accepted that there is soething worng
inherantly with saying or typing "shit" when "shit' is what you mean.

given that words like "shit" "fuck" have an impact beyond their
equivelanets feces, and fornication, why ot use them

the only that does is foisting a morality thatI don't accept

agree the word I mentioned and other are over used but that is a only a
problem in that it lessens their impact not that it is worng

To: An Old Friend

Your choice of language clearly identifies your value system.

The subject you passionately defend is considered immoral by 90+ % of the people in the world, and ALL the world's established religions.

A multicultural society will condone your language and lifestyle; and, YES, you must condone their 'straight' lifestyles. Any right you claim for yourself you must also respect in others with whom you disagree.

Finally, this thread is so far off subject that it deserves a quick referral to the circular file.

All you guys posting to this thread do not know anything about Usenet.

All this crap is being cross posted to newsgroups where there should
be no interest in this bickering, childish behavior.

Before you do any follow ups to this message, right before you hit
your send button, look at what newsgroups you are posting to. Delete
(do you know how to use your delete key?) all the newsgroups except
rec.radio.amateur.misc. then the antenna newsgroup and the equipment
newsgroup etc. will not be seeing the posts which are IRRELEVANT.
So if you like this bullshit bickering stuff go on over to
rec.radio.amateur.misc and you will see there are lots and lots of
them to entertain you all night long. You can call all of the posters
there names to your hearts content.

rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.cb,rec.radio.shortwave

If you are considering posting a floowup to this message do this:

Up on the top of your message delete all of the newsgroup names EXCEPT
rec.raio.amateur.policy because the antenna guys and the equipment
guys do not really care about this subject.

Thank you very much. The whole world will think you are much more
intelligent now that you know how to use Usenet.

Rick

2006. Re: I blame the posters

Newsgroup: rec.radio.amateur.equipment
Date: 2006-05-11 18:58:14 UTC
From: ricknj10@hotmail.com
Message-ID: <446388db.59963312@news.optonline.net>

If you are considering a follow up to this messsage do this:

Up on top of the message delete all newsgroup name except
rec.radio.amateur.policy

then go over to rec.radio.amateur.policy and check to make sure your
message got posted there.
And while you are there I am sure you will find lots of similar
messages to read that will entertain you all night.

Rick

The school yard is often lively with youngsters demonstrating their
capability of spewing out newly learned potty words that they
envision makes them more of a man.
However when they do mature they usually realize that kind of language
really only makes them appear child like. Some never do get it.
```

every word or phrase has its place and its use as does everymode of
beahvoir including say genecide the problem with all them is not that
they are imoral but siply over used

thus teacxhes the Talmund at any rate

PTOH childish is not imoral which was the posters point

I don't see how this is any more efficient (indeed, it appears to be
less efficient) than CW-Morse code. My understanding is that Morse
wisely used the least complicated sequences for the most commonly used
letters. I think this is also true of PSK31, but I could be wrong.

Consider the letter "E": a single "dit" in Morse, but it becomes
one "tap" followed by 5 "taps" in the above scheme. None too efficient,
it seems to me.

Many years ago in a land far, far, away.....

I had a tower up with multiple antennas on it... for the first week it was up, I left the feedlines coiled up at the bottom of the tower. I lived on a Navy base at the time and had to jump through all the hoops to put the tower up in the first place. I got a dozen complaints that first week....all were for TVI. Turned out that there was a CB'er a block over running an illegal amplifier.

I'm confused by the Homeowner's association statement that Federal law overrides their restrictions. PRB-1 doesn't obviate covenant or private land use regulations. If the homeowner agreed to deed restrictions on antennas when he moved in then he should be complying with them.

I haven't been able to find the covenants for the LakeRidge subdivision in Lubbock online, but unless the restrictions really prohibit antennas (and I doubt they do, the developer's comments notwithstanding) then the ham was well within his rights to install whatever size antenna he likes.

OTOH if the restrictions really do prohibit antennas then the ham would have to have agreed to them at closing, and the antenna would be illegal vis-a-vis his contract for sale. I don't think this is the case since any casual reader of the FCC ruling (PRB-1) would know that.

That's not my reading. Violating the law of hospitality. Where in the
Torah is that law specifically cited?

Homosexual sex is defines as SODOMY in Western Law.

Lots of operator skill there, eh Cecil?

Let them thar machines do it. Gives us more time to watch TV and improve
our watching techniques.

Yeah buddy.

They may sing a different tune when it is their hind-end that needs
help in an emergency. Although I think if I were him I would put up a
smaller beam just to be a little more considerate of the type of
neighborhood he is in.

I knew the neighbors didn't really like my tower and antennas, and I
recently took the tri-band beam down because I was going to
concentrate on 40 & 80 during the sunspot low. I may put it up again
one day, but for now I think they appreciate having just the 2-meter
beam on the tower. Of course I don't live in an area like that ham.
If I did, I probably wouldn't put up a tower in the first place.
Different strokes for different folks.

Sim-

I assume you have contacted Uniden.

Just how "sunbleached" is the meter face? If there is enough of the original marking left, you may be able to remove it from the meter, photograph it, and use a computer graphics program to do a restoration.

2066. bands to transmit

Newsgroup: rec.radio.amateur.equipment
Date: 2006-05-15 01:39:51 UTC
From: Roberto <freda@terra.com.br>
Message-ID: <1147657190.960599.262700@j55g2000cwa.googlegroups.com>
Source record: 9552

I have a new HT Vx7R and I can only transmit voice message in a few band width. For example, between 50.000 and 54.000 MHz, between 144.00 and 148.000 MHz, between 220.00 and 226.000...I would like to know if it is really this way and what are the bands of frequency that I can transmit.
Roberto

2067. Icom 208h Display Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2006-05-15 01:40:32 UTC
From: DP <darrylperrin@hotmail.com>
Message-ID: <k_Q9g.7812$A26.197990@ursa-nb00s0.nbnet.nb.ca>
Source record: 9553
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment

Was looking for some thoughts on a problem I am encountering with my new Icom 208h mobile. I mounted it in my truck yesterday with the remote control unit on my dash and the actual radio mounted elsewhere in the vehicle. When I powered it up this morning, I noticed that some segments on the display were partially lit that shouldn't be. For example I have an alphanumeric name on one of the repeaters, where the forth character was an 'H'. The display was showing an extra segment across the bottom of the 'H'. There was also a "sql" icon near the top that should not have been showing. The erroneous segments were not black like the others, but at about half intensity. After about 10 min or so, the display cleared up and was normal. After the radio is powered off for a while, if I turn it back on, it will do this again.

I have already programmed the radio, so I do not want to be too quick in doing a full reset and I am not sure this will help anyway. Does this sound like a defective display or could something else be causing this?

Many thanks and 73,

Darryl

Where do you live?
Do you have an amateur radio ("ham") license?

The frequency bands you mentioned are reserved for use
by licenced radio amateurs in virtually every country on
this planet (Earth). It is almost certainly illegal for you
to transmit on any of those frequencies in your country.
Get a ham licence and learn what you are doing.

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

CHECK OUT BILL'S NEW WEB SITE:
http://www.gadgeteer.us
Please feel free to link, bookmark, and send feedback.

Topics discussed in SolderSmoke #22:

-- Mike's RF amplifier struggles
-- Good RF citizenship: Bill installs LP filter
-- Loads and power out in RF amps
-- Bill's amazing UK hamfest (rally) adventure.
-- Fun with lasers and UV
-- Doomed to build a Binaural receiver
-- Website update, Google and Amazon ads

Listen at:
http://www.ourmedia.org/node/223906

Background:
Tired of listening to Led Zepplin or NPR on your I-Pod? Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in London, England meet regularly on the ECHOLINK system to discuss their homebrew radio projects. We are making them available as PODCASTS.

NEW RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software. We've been having trouble with our Ourmedia RSS feed, so Mike (software wizard that he is) has homebrewed his own RSS feed. In order to subscribe to SolderSmoke, point your podcast software to:

http://kl7r.ham-radio.ch/soldersmoke.rss

If you don't have an MP3 player you can just go to the site below and listen to the latest program (and earlier editions) using the audio software on your computer.

http://www.ourmedia.org/node/223906

Here's the homepage for our show. All our programs are available here. There is also a blog and links to some of the sites and documents we've been discussing: http://www.ourmedia.org/user/36170

We hope you enjoy the program. Please send us feedback.

73 from London
Bill M0HBR N2CQR CU2JL

None of the frequencies on that HT are legal to
transmit without a proper license.

2076. FS: Kenwood TS-50 HF W/AT-50 Tuner

Source record: 9562

FS: Kenwood TS-50 HF W/AT-50 Tuner
Kenwood TS-50 AllMode HF Mobile Trasceiver
Also Comes with the Kenwood AT-50 Mobile Antenna Tuner.
Bracketed together and cable that connects the two together.
Mic/power cord and I believe I have the manual.
All works fine.
Price: 500.00 Shipped and insured to your door.
I take paypal.
Reply to ritchi50@optonline.net

FS: Dentron MT-3000A Antenna Tunner
High power tuner and works great and looks great also.
Has one minor problem. The little plastic sleeve on the Transmitter
matching knob is no good. Its a small plastic sleeve that goes into
the knob. Again, the knob is fine, its just a small plastic insert.
I have two and just need one.
Price: 225.00 Shipped and insured to the lower 48 Stated.
I take paypal.
Please reply email: ritchi50@optonline.net

2079. FS: Drake R-4C Receiver LOADED!!!

>like a defective display or could something else be causing this?

This sounds like a defective display, display-driver, or a bad
connection between the display itself and its driving electronics.

Another possibility is that there's a "contrast" adjustment for the
radio, and that the constrast-adjustment circuit is mis-set (or the
contrast control is somewhat dirty).

All of these are problems I'd more expect to see in a used product.
It's not all that unusual for radios (and other consumer-electronics
devices) to develop LCD segment problems, due to loosening or
oxidation of the contacts or cables connecting the LCD to its driver.
Unplugging and replugging the cables, careful cleaning of contacts,
etc. can sometimes fix these problems... but these fixes are not for
the novice to try, and should only be done if you have the radio's
service manual and a proper set of tools.

If it's a new unit, I'd recommend returning it to the dealer and
requesting an over-the-counter exchange,

Please email mail this to your Division Directors and Section managers.
With a loud voice, maybe we can get the ARRL to work for us instead of
against us:

No more automatic renewals. Individuals must retest and pass all elements
required for their license class.

The passing score for written exams needs to be raised to 85%.

Code elements should be 13 wpm for General, and 20 wpm for Extra.

Make the no-code Tech license one year non-renewable.

sc

This personifies why the Amateur Radio Service has lost an entire generation of new members as well as why the average Ham is aged 62.5 years old.

It also goes far in explaining why fewer Emergency Operations Centers managers look upon Amateur Radio as a viable means of support during an emergency.

This thinking truly puts the "amateur" back into the Amateur Radio Service.

This is a perfect example of viewing the future through your rear-view mirror.

All in favor of that should respond to the relay league with their vote for the continuance of CW as a "filter" ; in spite of the decisions already made during the WRC03.

It has already "filtered" out the expertise of those receiving the most up to date training in digital communications.

Show your level of understanding of the current situation; vote for the continuance of CW as a requirement for the death of the Amateur Radio Service.

You better do it quickly; the ARRL has already announced new testing material being released for exams administered after July 1st, 2006.

Wink, Wink - Nudge, Nudge

The Code is dead; long live the code....

Nice troll. (...worthy of the late Polly from 14.313)

It would never REALLY happen you know.

If hams were ever forced to re-test when their license
was up for renewal, no doubt WHATSOEVER in my
mind that 75% would drop out from Ham radio.

Even the guys on 10 Meter FM working Repeaters and
28.600 simplex what scanner listeners and SWL's monitors
tune into would dry up overnight.

Apart from that ARRL only represents 20% of all
USA at best. Most people know that they are nothing more
than a publishing house which landed a 501C-3 Tax free
status via claiming to be a technical resource and training
NGO org. What a load of sheer bullshi++ery.

Arrl could go belly up tomorrow and it wouldn't
be worth a cup of coffee with Habib Patel at
the local Dunkin Donuts.

Actually there are NO automatic renewals now. You must apply for the
renewal. There's really no need to retest.

>
> The passing score for written exams needs to be raised to 85%.
>

Why? It's been 74% as far back as I can remember.

>
> Code elements should be 13 wpm for General, and 20 wpm for Extra.
>

The original code test back in the earliest days of licensing was only 5wpm.
It would be nice to have the 13wpm as a requirement since that's the speed
at which most people can't count the dits and dahs but those who use it will
get past that anyway. The 20wpm was only icing on the cake so don't see a
real need for it. Those who get to the 13wpm will get to the 20wpm if they
use it much. Although I advocate keeping code testing, we need not
reinstate the 20wpm in my opinion.

>
> Make the no-code Tech license one year non-renewable.

Pointless change. Many people don't gain enough experience or get together
enough of a station in a year to know if they want to continue.

I used to really enjoy the ARRL handbook. I used to purchase a new
one every so often here in Australia. I think the best valve ones
were in the late 80's and then naturally it slowly evolved to
semiconductors, integrated circuits and printed circuit boards and
more sophistacted circuits etc.

I think the old days of truly making your own receiver and or
transmitter are allmost gone.

I have become old any eyesight is now growing dim! I guess the days
of voltage doublers running straight off the mains because one was too
poor to buy a suitable power transformer are gone. I do like the
thought that the highest voltage one would come across now is probably
12 volts dc.
Many a time I forgot to turn off my carphone and 8 hours later I would
come out from work with a truly flat car battery.

When I look at some of the modern Ham gear I am amazed at how complex
and tiny they have become. I supposed all we really have left now is
making aerials and dxing.

Next time I am in the city I must checkout the latest ARRL Handbook as
I still enjoying reading them in bed.

Jim McCardle ex VK3ZOE in Australia. jmccardl@bigpond.net.au

2099. Controlling an Icom PCR-1500 from linux

Newsgroup: rec.radio.amateur.equipment
Date: 2006-05-16 05:29:55 UTC
From: ab <abo@TOGLI_QUESTOaxis-net.it>
Message-ID: <44696353$0$36930$4fafbaef@reader3.news.tin.it>
Source record: 9585

Has anyone ever succeeded in controlling a pcr-1500 from a linux box? The controlling software per se runs smoothly inside the dos/windows emulator "wine" under linux, but is doesn't "see" the USB port.

Three options in front of me:

- write the USB driver under linux (pain!)

- cheat and use a tty (com) driver and redirect it on the USB port (not sure the controlling software would cooperate...)

- find someone who already found a solution and is willing to share...

I'd love the third option.... 73s from sunny Italy,

I view many things through my rear-view mirror these days. It's a
better view, for the most part. Perhaps amateur radio would be better
off dying a slow death, rather than becoming completely bastardized.

I am not sure it would be fun to take all the elements from back in
the the 60s, every four years, though.

No, I am no longer an ARRL member....

The real demise of ham radio is not from dropping the code, but from
making it such a elitist group that nobody wants to join. There is
safety in numbers. We need to make the numbers bigger not smaller.

In case there is ANYBODY out there not realizing this yet:

Here's how it works:

A post will go as follows:

"The ARRL is a Nazi (or insert Liberal or Gay, or whatever) and all
Techs (or Extras or...)should be shot. AND I SUPPORT IT!!!"

Now the poster sits back and thoroughly enjoys watching the newsgroup
fill with verbal dung, back and forth.

If this is what you want, by all means respond to the poster.

If, on the other hand, you prefer ham newsgroups to be primarily there
to discuss amateur radio matters in a reasonable and informative forum, then

DON'T RESPOND!

Eventually, the asswipes will find some other lucrative market for their
"fun".

Can anyone advise where I might find a set of knobs for a dual shaft control, such as found on HP power supplies that have a course and a fine adjustment on the same shaft. Typically the outer shaft if 1/4" and the inner one is 1/8".

Ed K7AAT

Does anyone have any idea on some software that I could use with Fedora Core 5 and RadioShack Pro 97 Scanner? I have the USB Programming cable from RadioShack. I like Win97 but I'm in Linux more than Windows. Please help. Reply to ericmooneyham@charter.net

I still have my red 1957 issue. My father brought it home one day. I
was 14 years old and had this really big interest in shortwave radio.

I doubt it. Virtually all remote control programs run on Windows. You could try running Win07 under an emulator like Wine but I suspect you'd have to write your own USB driver.

2144. Kenwood TS-50 HF AllMode 365.00 Shipped & Insured

Kenwood TS-50 HF AllMode 365.00 Shipped & Insured
Works 100 Percent/Receives and puts out full watts on all bands.
Front panel is excellent, was mobile so cabinet has scratches.
Comes with short power cord with fuses on both sides and has the
original Kenwood microphone and comes with manual.

365.00 Shipped and insured . This Transceiver certainly will not be
dead on arrival.
FIRM on price.

I just bought a 1968 issue and a 1985 issue. Both look to be quite full of
theory and circuits. Haven't had time to look at all of the goodies yet, but
I'll get there. Already got my eyes on a 2-meter Xcvr and an RF bridge.

Even worse (or worst?). While researching (i was trying to run the Icom pcr-1500 controlling software under WINE), I found out that wine has no visibility of the USB ports (they're working on it, yet as of today no USB ports).

Someone suggested me to try it under VmWare, a little bit oversized as a solution... but worth a try. I haven't tried it yet, though.

Perhaps "efficient" is the wrong word.

In my experience, it is quite difficult to send distinguishable Morse dots and dashes without a key (YMMV). Doing so by keying a mic or touching wires together thus becomes very slow - slower even than tap code. Also, it takes considerable effort to learn Morse and even more practice to copy all the less than perfect fists out there. Thus the number of operators and potential listeners who can copy such a 'bad fist' are few now and are rapidly vanishing now that Morse is strictly a hobby mode. OTOH, everybody who read my post now knows tap code - which is common in prisons, mines and other places because anybody can copy it with little or no practice.

I'm not suggesting that anybody eschew Morse if they enjoy it - just that they stick tap code into the back of their minds for emergencies.

Good point. It is true that the original Morse code was merely clicks
and spaces on wired telegraph systems, similar to the tap method you
suggest. I see the advantage that by tapping slowly, anyone who knows
the scheme can copy. This is also true of Morse, of course.

You might also try "Cedega", as they are the best "Windoze" compatable
emulator for Linux that I know of. There is one other thats mainly geared
towards running "Windoze" office applications... But for the life of me, I do
not remember the name of it..

Also there "should" be some Rs232 compatable adapters out there that will run
under "Wine/Cedega/VMware" that you could adapt to programming the scanner...

I have moved my junkbox surplus stuff to a new website.
http://www.hamradparts.com

1N4148 Diodes $3.00 for 100, $4.00 for 200
1N4001 - 1 Amp 50v General Purpose Rectifier Diodes - $3.00 for 50

33pf NPO Caps, SMT 0805, 50V - $3.00 for 100
150pf NPO Caps, SMT 0805, 50V - $3.00 for 100
220pf NPO Caps, SMT 0805, 50V - $3.00 for 100
390pf Caps, SMT 1206, 50V - $3.00 for 100
1500pf NPO Caps, SMT 0805, 50V - $3.00 for 100
3300pf Caps, SMT 0805, 25V - $3.00 for 100
.1uF Caps, SMT 0805, 50V - $3.00 for 100

SPECIAL SMT PACK - 50 of each listed value $9.00
350 total parts

2N3704 NPN TO92 - 20 for $2.00
2N2907 PNP TO92 Package - $4.00 for 50
2N3904 NPN TO92 Package - $4.00 for 50
2N2222 NPN TO18 (metal) Package - 5 for $1.00
MMBT4403 PNP SMT transistor - 50 for $4.00

SPECIAL: 100pcs PN2222A Motorola $7.00- FREE SHIPPING

2N2222 NPN TO92 Package - $4.00 for 50
The 2N2222 is a bulk transistor...meaning the part is not labeled.
They ship in a Zip Lock packet and the packet is clearly labeled.

2N3906 PNP TO92 Package - $4.00 for 50
The 2N3906 is a bulk transistor...meaning the part is not labeled.
They ship in a Zip Lock packet and the packet is clearly labeled.

IRF510 - MOSFET AMP TO220 - 4 for $5.00

Crystal Ladder Filters anyone?
3.575611 Mhz HC49 Crystals - 5 for $2.00
4.9152 Mhz HC49 Crystals - 10 for $3.00
9.830 Mhz Crystals (SS2 package) - 20 for $3.00
LM7805ACV 5v Positive Voltage Regulators (TO220) 5 for $2.00
LM386N-1 - Audio Amp 6 for $5.00

Sticky Back Rubber Feet for your projects, self adhesive - 8 to a strip - 2
Strips for $1.00

Panasonic Wall Warts - 12VDC, 500mA (center negative) $6.00 each
If you need center positiove, cut off the end and reverse it. I use these to

power my
rock mites, my TT2, and all of my homebrew test gear.

8pf NPO Ceramic 50 for $3.00
11pf NPO Ceramic 50 for $3.00
12pf NPO Ceramic 50 for $3.00
22pf Ceramic 50 for $3.00
470pf Ceramic 50 for $3.00
560pf Ceramic 50 for $3.00
.1 uF (104J) NPO Ceramic 50 for $3.00
.01uF (103K) Ceramic 50 for $3.00

SPECIAL PACK - 25 of each listed ceramic $10.00
200 parts total

Cash, check, paypal now accepted

Paypal to: orders@hamradparts.com

Add $3.00 shipping to any order under $50.00 unless you are ordering the
special Motorola PN2222 transistors.

Yup, I hear that often, which is why I've had modest success with Jerry
Ziliak tapes. He sends at a character speed of 21 WPM, so each letter
almost becomes a single sound. Although that hasn't helped me much, thanks
for the thought.

> There is always
> a sense of accomplishment in expanding your abilities in ham radio. For
> example, in the past couple of years, I've been exploring the digital
modes
> and VHF/UHF propagation.

Oh, yeah!!!! I am into packet and APRS, into building antennas for myself &
for the RACES stations and into teaching. Here in the West, we have
something called the Western Intertie Network System or "Win System"
http://www.winsystem.org/ which is loads of fun. It also has IRLP, so I've
chatted with guys all over the world with it.

I did HF PSK31 under the club license during FD a few years ago. Great fun.

I've became an ET in 1962 (USN) and liked it well enough to stick around for
21 years. I became an engineer in 1989 (thank you, GI Bill), so I know my
way around the 'trons. I've only been a ham since 1992.

2170. FS Standard CSA-181A Rapid Charger

Newsgroup: rec.radio.amateur.equipment

Watch all the obese BEER BELLY'ed hams waddle on by
in the parking lot flea market at the Hara Arena.

CLICKINZIE HERE: http://wa5kub.com

The camera was in operation today (Friday) and it's
2000% proof positive what the FDA has said all
along about the rampant obesity epidemic in America.
(makes you wonder how many Big-Macs they sell
this weekend especially in and around Dayton)

There is also an OPEN CHAT ROOM on the site where
you can comment on the goings on. Almost as much fun
as being there live.

Trust me folks, you'll see more middle-aged pathetic looking
white men than anywhere else, possibly except being
the local model train show or the next NASCAR event.

Source record: 9617

I have owned this radio for many years having bought it new. I had planned on installing it into my isuzu trooper but never actually managed to get around to it. It has had no more than three to four total hours of use, if that. I has mainly been sitting on a shelf waiting to be installed. It has never been installed in a car and the little use it has had was on the bench with a bench top supply. It is in excellent condition with everything except the original box.

Asking $150.00, reasonable offers considered, no trades.

Contact me at pwborders at gmail dot com

Roberto wrote:
> I have damaged my charger NC-72B after using it in a 220 V outlet
> (instead of 110 V). Is it possible to fix it?

You will need a resitance meter and a lot of luck. Open it up and look for obvious signs of burnt components. In the last week I repaired two items that had been plugged into 230 volts that were designed for 120.

One was a Canon printer, it had an exploded capacitor. I checked all the components I could to make sure they were probably ok, such as the fuse (it was ok), the diodes (they seemed to be ok), and the resistors. After replacing the capacitor it worked fine.

The other was an original Sony Playstation. It just needed a new fuse.

Other items I have tried to fix, were not so simple or I was not so lucky.

I often find that it's cheaper or easier to replace or bypass the power supply and use an external one.

Geoff.

Certainly.

But perhaps you meant to ask whether it would be less
expensive to fix it or to replace it. That is a very different
question.

It might be cost-effective if you could fix it yourself,
but not recommended without previous experience
fixing these kinds of circuits. They are frequently rather
tricky, and almost always dangerous. If you have to
ask the question, it may be a good indication that you
should not consider doing it yourself. OTOH, if you
have to take it to someone who charges commercial
rates, it may very likely be less expensive to just replace
it.

True, but I must have counted close to 40 (fourty)
morbidly obese hams seated in those motorized Scooters
that I saw zipping by the HamventionCam today.
Many of them stopped for the camera, got up mugged
4 the camera, then hopped back on and zipped away.
(funniest was the guy pulling a red wagon behind his Scooter
that had a couple of big astron power supplies in it.
Guess he needed one to re-charge the battery ? (grin)

I was there for 4 hours on Saturday.
Nothing but old test equipment and computer junk.
Only reason to go anymore is to meet people, albeit an
expensive one. Never again will I goto Dayton.
It's day has ended, period. E-Bay and private ad's on places like
QRZ.com have killed it. Not worth the effort anymore.

The last time I was at dayton was 1987, and it sounds like it hasn't changed. It was always a place to find parts and equipment. In the early '80s it had a couple years where it was mostly C-band sat TV equipment, parts and kits. In the '70s it was mostly military surplus and half finished assemblies, along with older tube type ham equipment. What you find depends a lot on the economy, If its been good for a while, there is more good used equipment. Also, the newer radios fail a lot faster, so less make it to the used market. Some of the mail order dealers don't have any real inventory, so they have nothing to take to hamfests because they ship fill their orders as fast as their stock comes in.

I have only been to Dayton once and found it interesting. If I was
within 200 miles I would probably go there every year but being on the
other side of the country once will have to do. The Flea Market is nice
but that cannot be the only reason for one to go to Dayton. There are
numerous other activities going on all the time and I believe if one
goes to Dayton they should make them the main priority instead of the
Flea Market. Almost anything can be bought online nowadays so to go to
Dayton to haul home a car full of junk just doesn't make since anymore.
So how about a Dayton without a Flea Market ? Are we all so much
into the Junk of our Hobby that we forgot the human element?

Just my two cent worth.

Well, its a 2000 mile round trip these days so I simply can't go. I
did go almost every year from 1970 to 1987, when it was a little over an
hour's drive. I bought tools, parts, manuals, databooks, test equipment
and things I couldn't find at any of the local distributors or surplus
dealers. I made the circuit inside to talk to Motorola and several
dealers, but 95% of my time was spent going through the flea market. I
could by new parts for 10 to 205 of what they would cost from a local
dealer, so I would buy a lot of my inventory for the year, if the price
was right. Where else would you buy a pair of new enclosed racks worth
more than $1200 for $75 from a company that had just gone out of
business, or a nice scope for $5 in those days?

Hello All.
I have an ICOM IC706MKII and occasionally the receive & transmit drops
way down. I can still hear strong stations and they might hear me but
very weak on both (TX & RX).
It does not do it all the time. It just went all winter without a
problem but has now cut out (or down) twice in the past week or two.
The rig works fine otherwise.
Any one else have or hear of this problem? Any suggestions as to the
cause?
Thanks for any help.
VE1KRE - Keith.

Saturday is the worst day to attend Dayton. With all hamfests, the best deals are either sold during dealer setup before the hamfest or during the first few minutes the hamfest opens. Some folks who don't intend to sell buy vendor passes to shop early. If you attend hamfests to buy and you can't be there when the doors open, you might as well stay home.

Well run hamfests do have good deals that rival or beat Ebay hands down. I usually come home from good hamfests with an item or two that made my trip worthwhile. Then there's hamfests held year after year in the same poor rut that makes you wonder why the sponsors even bother...

Once upon a time, one could talk with designers/engineers and find some
useful bargains. It was interesting and much anticipated in spite of the
pain every year to find a room. The attendees were of all ages.
A couple of years ago, my EE department thought to have a booth with an
eye to student recruitment. Head of the department has kin in Dayton and
attended when visiting. He concluded that a booth made no sense. Looking
at the pictures of this year's attendees makes it clear that he was right.
Dayton's time has come and gone. A shame.

Actually Ebay didn't kill the Dayton Hamfest. In the 1980's it was
being handled as though it was still the 1950's and full of stuff that
had been carted between too many hamfests. Dayton is dying because the
promoters made the conscious decision to do nothing.

I remember it when people came from all over the world to the dayton
hamfest to see the new product releases. A lot of manufacturers unveiled
their latest radios and accessories there, every year. I also met the
founders of a lot of small manufacturing companies at the mini trade
show that was inside Hara Sports Arena. There was an sheik from Saudi
Arabia who flew in every year in a private jet. He was followed around
by his staff as he talked to different manufacturers and bought
multiples of anything that caught his eye, while the staff paid in cash
for the orders and arranged for anything that was in stock to be trucked
to the Dayton International Airport.

Today the Flea at Dayton is less than 1/3 full .. where up until about 2000
you had to have someone die and will you a flea market space to get into
the place... too many of us tired of the "Aisle Police" and the "Tent
Police" and the "Door Police" and the Trotwood Firedept won't let us
do this and that and the other thing... plus the hotels jacking the rates
of 40 to 60 buck rooms up to 150 a nite with 3 might miniumum...
Sorry but this was my 2nd year NOT to attend...

Well, that pretty well kills off the casual attendees that are essential
to bring fresh blood into the event.

And although the $25 might not put off the hardcore hamfester it does
put off a lot of the 'regular' people that are the foundation of the
event. Add $3 gallon for gas for a guy from Indiana who has a few
radios to sell and doesn't care if he makes a buck or not on the radio
but now he's out of pocket some actual cash money. Much more than
taking the family to a movie and buying popcorn!
C'est la vie.
I think a lot of these hamfest promoters figger on pricing themselves as
some sort of 'event' rather than just a big swap meet. It doesn't seem
to work that way anymore.

It isnt just Dayton, its nearly all hamfests. Check out what they are
doing to Ham Comm in DFW area this year. 48 flea mkt tables vs usually
about 300!! They made sure it would fail.

The number of new products released tells it all. Whats new, absolutely nothing.

The worst part is the price of all this old junk, some people think buying old junk should cost more than gold nuggets or close to new prices. Collins mania must have spread into old junk parts. Amps parts especially!

The biggest joke was RF parts like vacuum variables, "what you want $200 a piece with no warranty! Same comments apply to tubes. You might as well buy new or from one of the reputable dealers who will give your money back if its a dud.

That was at the door. If you pre-purchased, it was $20. Is that a lot of money for what is still the largest hamfest on the planet? I was there this year, and the place got picked over quickly. I'm sure there was little left by Saturday. I brought 3 radios to put on my brother's table, and they were all sold within 2 hours for more than I would ever have gotten at any of our local radio meets. So,for me anyway, while it may not be what it was compared to previous years (what radio meet is?) I still find Dayton a lot of fun, and well worth attending. Blame eBay if you like, but the fact is that there is very little new blood coming into the hobby, and the old blood, is-well-getting older.

Sure!!

HamComm charges $10 admission, like Dayton charges $25
a head to get in. Their pricing themselves clear out of the
market! Then add in the price of gas and food and is it any
wonder why hams are staying home and ordering their
radios onlive via e-Bay or elsewhere ??

It's actually cheaper to go see a Major League Baseball
game live admission than it is to go to a stupid Hamfest.

Do the $$$ homework boys - you guys that run these ham events
are screwin yerselves faster than Barbaro broke his leg last week.

After having spent a couple mos attending local AR sponsored swap
meets, I figure the "doors open" buyers are there to score deals they
can turn around and put on ebay.

And the "they" is not always the involved ARC. A local club here got
kicked to the curb by the local community college and now have to
stage their long running monthly swap meet at the rodeo grounds in a
dirt parking lot. That killed off most of the computer vendors and
literally cut the size in half.

2225. Ebay & "The Market"

Newsgroup: rec.radio.amateur.equipment
Date: 2006-05-22 15:34:07 UTC
From: Peter Wieck <pfjw@aol.com>
Message-ID: <1148312047.828984.28290@38g2000cwa.googlegroups.com>
Source record: 9511
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.shortwave

After reading all this, and with the recent Kutztown event in the background, as well as my three weekend finds, I am not so sure eBay has much to do with anything as to radio prices or availability. This is based on several assumptions which I will list for correction/addition/amplification:

a) the west, southwest and south in general suffer from a dearth of good radios. This has been the case for the over 20 years I have been in the hobby and remains the case today. Exceptions include Florida & Maryland... stretch to make MD a 'southern' state although it is below the Mason/Dixon line.
b) the Pacific northwest suffers from the same lack to a lesser degree.

With this in mind, eBay has always been a presence in areas where the natural crop is limited or non-existent. This group will typically have a view of radios that is wildly distorted in price, as they start with the "everything costs $15" mentality based on shipping alone.

As one moves east especially into (former) wealthier parts of it, and around older major cities (Chicago, Minneapolis, Detroit and so forth), radios become thicker and thicker until one hits the East Coast, where even the most limited multi-family garage sale will offer a few examples of *something* loosely described as being related to the hobby. Then, at Kutztown, the typical $30+shipping eBay brown bakelite radio goes in the $15-if-that range at the end-of-meet auction. And the $229-for-a-common-RCA (albeit polished to glow-in-the-dark proportions) simply does not happen.

So, it is "all according to" location and opportunity. Kutztown is a free-to-the-public event held at a major Farmers' Market/Antique Market that also has weekly tables for anyone selling. Accordingly its attendance is disproportionately large and consists of a disproportionate amount of the "general public" walking through out of curiosity and because they were 'there anyway'. This would not happen at a destination-event if only because of the lack of general publicity as much as the uninterested public would never go nor have any reason to even be proximate that they might go. And, of course, the admission fee would deter those few that did happen to be straggling nearby.

I will also state for the record that Kutztown had _at least_ thousands of radios in all states, of all types and in all price ranges, from high-end, high-tube-count consoles through lovingly restored tabletops through standard junk. The peripheral events are limited... no hotel-banquet-hall lectures, but those few were directly on-point and even of interest to non-radio people (The talk on Crystal sets, for

example).

So, from purely anecdotal evidence, it appears that those venues where the general public is not actively solicited, those venues that are 'preaching to the converted' are shrinking. Those that do solicit the general public, those that run at (apparently) a much lower key appear to be growing. The two local examples would be the DVHRC-sponsored events (Kutztown, PA) and the NJARC-sponsored events (Hazelet, NJ). Those of you that go to the NEARC events in Nashua, New Hampshire... how are they doing? I hear from some acquaintances that they are doing quite well? And I also hear that Rochester is a mere shadow of its former self? Is this true?

In any case, I remain of the general belief that eBay is not a significant factor in the hobby to those in the east. And to those in the west or out-of-range of large, older population centers, it has _always_ been a factor, neither more nor less much than now.

The thoughts of others are actively solicited!

Amateur Radio Manufacturers and unfair pricing!

Here I sit the day after Dayton, calling around to all the dealers looking for a HF Transceiver. There were some fantastic prices offered on equipment (As much as $500 off list), and the dealers are back to charging full price today.

I am told by the dealers I called, that the Manufacturers were making deals with them so they could sell there inventories much cheaper, and the orders had to be taken at Dayton. Today, the day after when most of these orders had not even shipped yet, they are back up to full retail price.

To be fair, Manufacturers should allow these prices for a time period after Dayton to give other Amateurs who could not drive to Dayton an opportunity to get the same deals.

I think we should all write to them and let them know how we feel. This is unfair !

According to the snowbirds from the New England area, Florida is the
southern tip of new England. :(

So, you're saying that the price hasn't changed that much since I left
Ohio in the late '80s? Do you think that they get Hara Arena for free,
or all the cops and bus service for park and ride?

good points.

The local flea markets here, always seem so barren of good stuff. So I managed to get to one 35 minutes before official opening time.

I was surpised to see the smart buyers already walking out with boxes full of all the good stuff !

The best items sell, as the spots are still being set up.

Regardless, Dayton was packed with attendees. You could barely move at times
in the indoor exhibits on Friday.
Parking lots were full, there wasn't a hotel vacancy anywhere, etc.

> It's actually cheaper to go see a Major League Baseball
> game live admission than it is to go to a stupid Hamfest.

Not for a Chicago Cubs or White Sox ticket. No way.

No, I'm not affiliated with them. But this company has a promotion
going this summer that you get a free qrp transmitter (it's not a kit)
if you buy one of their portable dipole antennas. Here's the promotion
page:

As a rank newbie (not even licensed, yet) I more or less have to agree. Here in the San Francisco Bay Area (SFBA) where there are at least a couple local ARC swap meets per month, I see none of the stuff found on ebay in the way of classic old ham equipment. Hell, I can't even find a used morse code key to practice on. I'm gonna hafta buy a new Ameco from HRO. Not quite sure exactly why this is. Perhaps most of SFBA ppl are all digitally oriented due to Silicon Valley being the original hot-bed of digital. Whatever the reason, old Collins, Drake, Heathkit, etc, rigs are rarer than cheap gas and low real estate prices.

On the positive side of the ledger, due to the glory days of the late great SV, there's hardly a man or woman alive in Northern California that can't fly a Fluke or wield a mean Weller. I'll be flogging my own acid-free flux and have already bought my first QRP kit with my eye on another.

Why don't you just tell them to keep the low prices all the time!

If they gave you the low price, then they would have to raise the low prices
at the show.

I have to agree. I got to Dayton last year shortly after
the opening, and there were already some R5000's
and some beautiful old Hallicrafters that already had
"sold" tags on them.

I've gone 5 of the past 6 years.
4 years ago there was a tent full of old AS/400 CPUs.
Less of that this year. Still, a lot of junk every year.
People wanting high-dollar for very-worn equipment.
That was disappointing.

What gets me is the guys selling bootleg MS software for big bucks.
Illegal as all get-out.
But tolerated, apparently, by HamVention.
They could get in big trouble.
That would be sad.

But it's not the only way that the WWW has changed Dayton.
It's changed the whole of communication.
Repeater/IP connections may be nifty, but they're not radio.

Maybe it has something to do with the number of people hit by a car
or truck, and the number of other accidents they cause when they step
out in front of a moving vehicle. I've seen quite a few wrecks going
to, and leaving large hamfests that could have been avoided by keeping
foot traffic away from the vehicular traffic.

Internet based sales have a huge advantage over in-place sales like
Dayton. Ebay and other sales sites can as we all know bring sellers
from around the world at any time of the day. It just isn't possible
to get that kind of coverage at an arena in Ohio.

To the extent that buyer and seller are honest (and most are) internet
sales work very well because money and the good to be sold have to be
moved only once.

It is for the exact same reason that in-person antique shows are having
a hard go of it.

I am a new Ham and have been to two ham fests this year put on by local clubs. Very disappointing. I thought maybe I could get some used equipment
since I had none. If I had been looking for 23 channel CBs or obsolete computer junk I would have been all set. I thought selling old 23 channel Cbs was illegal because of the power.There was a real dealer at the one so I got a new VX 150 from them.Got home and there was no paperwork in the box. Went back to get it at 11:45 AM. The thing was suppose to last till 1PM.
Everyone was already packing up all their junk.This dealer had no time to find my manual and stuff and said they would mail it.Took 2 weeks. Lucky for me I found a manuel on line. I'll still try different ham fests but if the granddaddy was a bust I don't know about the small clubs.

E-bay and other on line auctions can never replace spotting a part or
piece of equipment you need that isn't worth the dealers time to list,
or would cost too much to ship. More than once I've asked about
something and was told to take it, so they didn't have to haul it home.
I've never seen an E-bay listing giving something away, and paying the
shipping to your door.

Shuuuu, don't tell everyone. That's half to reason to get a
flea market space. That way most of the time you get in
before the general public and scoop up the good deals....

You have a point there - not that I totally agree with the poster you
replied to. I've had some real bargains "handed" to me so they didn't have
to be hauled home.
Actually, each venue has its own place in life. Problem with Dayton and
other hamfests is between fuel costs and so on - there are more and more
factors involved keeping people away. Ham radio itself isn't what it used to
be. Then, some clubs who've had them - as I've heard it - had inner battles
as to how things are to be done and so on. So club politics played a part
along the line. I'm sure we could list many reasons for failures as they're
being seen. Question is, who has the "answers"? Times are changing. Things
change with time and I see it here in my own town - People DO NOT like
change. I'm sorry to see some things go too - but there's not much you can
do about some things.

Clearly Ebay and other internet sites won't completely replace in
person sales, be it a hamfest, garage sale or estate auction. But the
ease of bringing large numbers of buyers and sellers together via some
internet connection has had a significant impact on brick and mortar
operations. The ease of transacting a sale electronically be it for a
Kenwood 940 or a spinning wheel can't be ignored. And the sellers that
fail to react in some way will be left behind.

I have a friend who's a professional flea marketeer, he told me that
for an 8 AM opening time, he's already walking around at 6:30 AM buying
stuff- and by the time the public gets there, the stuff that's worth
$200, that was selling for $25-50, is gone- other marketeers already
bought it

then, they put it on ebay when they get home

what doesn't sell, goes back to the market 2 weeks later

constant cycle

the average joe can get lucky here and there, and find some stuff under
bushels, etc., or from someone that set up late, or someone that
finally moved off a high price

but for the most part, the VERY early bird, gets the worm

anything you see sitting at a flea market late in the day, was most
likely already tried on ebay, and didn't reach reserve, or got no bids.
sometimes you'll see stuff at flea markets that seems valuable, and
underpriced, and no one is biting

that's cuz the marketeers already know, that particular item is
hammered on ebay, too many listed, and the price is down- so they are
cutting their losses and just dumping it

marketeers will tell you, they'd rather sell it cheaper at the show,
than for slightly more on ebay- because of ebay and paypal fees, and
packaging work involved- and nitpicking assholes like DeserTBob on
EBay, who want gold for a penny and free shipping

The granddaddy was not a bust, it was awesome. Had a great time (always do).
There was about anything you could want, I think, either used out in the flea
market, or new inside the buildings.

Yeah, right. What about the people who don't even have a computer,
or don't trust online transactions? They'll never go near E-bay.

You snooze, you lose.... I buy *most* of my new toys at hamfests from a
specific dealer. I call them a week or 2 *before* the hamfest and give them
my shopping list, and they give me a great price with the added benifits of
no shipping or sales tax. Maybe you should try it some time. FWIW, I
couldn't afford to take the time off of work to go to Dayton either...it
would have cost me too much in lost sales.

2253. Re: Ebay & "The Market"

I think Peter is pretty much right with his observations, Project sets are plentiful in the Northeast and upper mid west, and the West coast folks are really desperate! I very seldom buy on ebay, but do keep a watch on things. The only things I ever buy are large pickup only consoles that are close by. Most of the Restored stuff I sell ends up in the deep south or on the west coast, the Cost of living is so high in California that a Nice restoration at Retail WITH shipping across country is still a bargain out there.

Ah, Ron....

RANT WARNING

You need to understand the essential difference between a "Flea Market" and a Hamfest or Radio Meet. Fleas are just that. Locations where mostly crap is redistributed amongst a few, and mostly Chinese Junque is sold at no-better-than- Cosco or Sam's Club prices, but somehow the appeal is the 'story' and perceived bargain vs. the actual reality. Those that do it "professionally" (NOT ALL, mind) are in many ways the cockroaches of society inhabiting the dark corners and hiding under filth to avoid paying taxes and to skim from society without paying any freight. I once was present when the State Police together with the FBI and quite a number of local police groups raided the Pennsauken (NJ) Drive-In flea-market. They focused _only_ on the 'professional' dealers, some 90% of which (a line of handcuffed mostly-men that stretched over 100 yards, shoulder-to-shoulder) were selling all/some of the above: Stolen goods (Wonder where that "Sears Craftsman" or Still-in-the-Clamshell Channel Lock or Klein or Mac or Snap-On comes from?), knock-off goods, illegal goods (baby clothes not fire-treated, recalled tools and/or appliances), mislabeled goods (made in USA... NOT), pirated goods and so forth. And the Feds were there for the Tax-Evasion stuff as well as the across-state-lines stuff. The 20% of the dealers that were in it for the weekend, cleaning out the attic and the like were entirely ignored. Very damned little of it any more has anything to do with "recycling" used goods. Yard sales and garage sales, church bazaars and such are about the last refuge for that kind of thing. But keep in mind that every time one buys something stolen or a return or a recall or a torn-cover paperback at a flea, one is quite directly taking someone's job away, usually right here in the good old USA. Who gets sued if a recalled defective Craftsman or Stanley or Klein or Channel Lock Tool sold at a fleamarket hurts someone? The "vendor" that stole it and resold it? Not hardly. And whose prices _all_ go up as a result? Ours. And is it Chinese manufacturers that go out of business due to overhead costs? Nope. But, very damned few of us think about this stuff when we see that tempting tool on the table. "We" figure we can buy it at the flea, then take it back to Sears if it breaks.... GOOD thinking.

On the other hand, there are "shows" dedicated to certain hobbies. My approach to a 'timed' show (opens X and closes Y) is to not sell _ANYTHING_ except as-marked before the show opens. I tell people that I will negotiate price one hour (1hr) after the show opens officially, but not until then. Period. And when someone askes me what is my

"dealer price" I add 20% automatically. But that is *just* me. Once upon a time, one dealer at Kutztown, very early on when it was a 1/2 day affair was all over me as I was unloading. And as this individual would easily have made three of me (no kidding, and I am 6'-3", at 220lbs) it was annoying to say the least. He was picking stuff up, pulling stuff out of boxes, turning stuff over (and leaving it) and such. All the while pattering on how ridiculous my prices were. At the time, I had sprained an ankle and was using a blackthorn stick just after sitting or driving until I loosened up. I actually had to raise it and call for witnesses before this particular jackass moved on. At the end of the day, I drove home with a full pocket and an empty vehicle. His load was still with him, literally and figuratively. I will not say that my raising a very loud stink to get him off my stuff had anything to do with that, but I would like to think so. I had a 'pot' to support the hobby for another year. It has pretty much been that way ever since. I cover my costs, and turn over my radios keeping fewer and fewer, but nicer and nicer radios, and fewer-but-very-much-nicer audio systems.

So, it is all in accordance with how one behaves, how one sees the world and how lady luck sees you. I have found as many bargains in the last 30 minutes of a flea market as getting there before set-up. Mostly I am buying for my own use and pleasure, resale is at best a tertiary concern even if that... This is a HOBBY for me, the moment I feel I am becoming predatory, buying for resale or otherwise treating it like a business, I take a deep breath and walk away. THAT IS ONLY ME. Others are free to behave as they see fit. But I want to be able to look any of my buyers in the eye years later and get a smile in return.

END RANT

The local HRO store claimed to have "Dayton prices" last weekend. I
didn't buy a radio so I don't know how good the prices were.

They usually have prices below the "sticker" price.

were we at the same Dayton?

It was my second one in five years.. $300 flight. $97 rooms at a Marriot
and $ 75 for an Avis rental.

Great time, lots of stuff to see and would have bought a lot more if I had
not flown in.

I think that the hamfests are down since the 80s and 90s but I also recall
those fests had a ton of used computer dealers, so the number may have been
artificially inflated as the way of build your own computer went away and
those guys left.

Sure there was some overpriced stuff and they did not move. But there were
some very reasonablely priced things that did.

I'll be back again in 3-5 years.

You cant touch or feel or converse as well with internet sales....nothing beats the face to face events, if they are well run. In the antique radio world, Extravaganza is one of the best, Bolingbrook is making a strong comeback from the Elgin days, Charlotte is strong and Kutztown is overflowing into the next pavilion.

All you have to do is have a good facility, be open to the general public for free or little money, and promote your show like crazy. An enforced set start time makes it more fair, as Extravaganza and Charlotte have proved. The other two should consider that...

I sold at Dayton in '96 and '97. It was sliding down then even in my opinion... I only sold about $1300 worth in two days... about half that could be considered profit. Not worth it for what was essentially 4.5 days worth of work (1 day loading, 2 days there, one day RT driving, half day unloading). I had all tube era stuff.. tube sockets, capacitors, trimmers, Ham type tubes, etc, etc. All the guys stolling by had "Rice Boxes" strapped to their belts and didnt know which end of a soldering iron to hold. One guy even held up an old RCA 811 tube to show his buddy and said "I remember when we used to use these things!" His buddy'd never seen a tube I think, and he was about 35, this being back in '96.
I had 100 pc bags of mylar and filter caps priced lower than anywhere, and I mean ANYWHERE. Still do.

Hi All,

I acquired a Pitch-Prop motor a number of years ago, with the intention of building a antenna rotator.
I still have the intention of doing this, and have checked the motor for operation. This works out very nice, and was able to control it to different speeds with different voltage.
I have a construction design for the mounting of the motor and gearbox to the tower, and antenna.

The problem I have now, is I wish to construct a suitable control unit, with digital readout, and the possibility of controlling via a mini PIC control, or via PC.

I have searched the internet without much success, so my next course of action was to see if anyone on these groups might be of help.
So I put my hands up for HELP! :)

Any help would be gratefully received.

Thanks in Advance.

Kevin, ZL1KFM.

Excepting the readout, this should be a fairly routine motor control problem. Depending on what you want to do your control box could be as simple as a current-limited power supply and a couple of switches or as complex as a fully fed-back motion control system.

How's your electronics skills, and how fancy do you want it to be?

I also had a great time. This is my 43rd Dayton Hamvention in 45 years of being a ham. Yea, it's changed a bit, but still, IMHO, worth the price of admission. I found everything on my list, and at acceptable prices. Some things were indeed overpriced, but just walk away and keep looking. I'll not forget the old Johnson Speedex key (in excellent condition) that I bought from some guy in a cold drizzle for $8 a few Hamventions back. He was anxious to sell anything. Maybe the best buy I've ever made at a Ham 'tailgate' (or flea market if you like).
Of course it does help to be an hour away. No airplanes or hotel rooms does make it affordable and easy, no argument from me. If E-bay killed Dayton, wonder why all the people were there anyway. It was as crowded as usual.

I'm already looking forward to next year.

I honestly don't think $25 is that out of line. How much are boat shows, Home and Garden shows? Probably a LITTLE less but they draw from a much larger market and have significant vendor support.

I was hoping I'd see something in these groups about some new products or SOMETHING NEW...All I see is bitching.

C'mon, folks. Take things as they are. It's not going to be 1950 or 1970 or even 1990 again.

I do intend to go to the Hamvention next year...for the first time in 30 years!

I'll have to agree with this. I found what I was looking for plus an old Allied A2516 tube ham receiver practically given away because it had a blown fuse and missing cover screws. Other than that a great time seeing old friends, alot of new stuff, and the weather was perfect. I don't think Ebay can steal any of that. Maybe it wasn't the best place to find antique radios, but it's a HAMfest and old radios are not the majority of what you find there. If anyone thinks that the crowd is less because of Ebay, wrong!! Hamfest numbers have drifted downward in the past few years due to diminishing ranks in Ham Radio. Now if this were a computer show you'd see a bigger crowd. In short, you get what you get out of a Hamfest. Just because you don't find alot of give aways at the flea market doesn't mean it's a disaster. There is always plenty of other things to do. This is true for the smaller hamfests as well.

I'm going to recommend against electronic feedback unless you are a control systems hobbyist... I did PID (proportional-integral-derivative) servo on a homebrew rotating mast so I didn't need a readout and eventually decided to go with a rotation sensing pot, a voltage-to-current converter, and a surplus meter.

This was after I tweaked the PID to get rid of the oscillations but still had some average position errors...

I guess with a digital system it would be easier to optimize. Mine was all analog... and only one op amp, so the settings interacted :-)

Making the motor go and watching the meter is a more sensitive and intelligent form of feedback, as long as you've got a system you can't break by turning too far.

A simple pulse-width-modulator for speed control might be in the cards though. That way you send a variable duty cycle full-on full-off pulse train to the motor. Good torque and you don't need a variable power supply just to run the rotor.

I'm going to add one to my rotator soon... I've got that on manual right now... pulsing the switch makes a nice slow smooth rotation!

If you do like electronics projects for the sake of electronics projects, feedback control is an interesting way to go, though.

I stayed on the west side of Columbus one year [great new motels, great
restaurants], and near Hamilton another year [near to both a never ending
supply of Cincinnati chili and Jungle Jim's] -- worked out great both
times.

Hi Dan,

If anything, going digital has all the prospects of thrashing the
antenna into shreds. The oscillations you speak of are eminently
suited for an analog solution - you simply have to understand the
nature of resonance, coupling (over, critical, and under), and attack.
If you don't, translating them into binary code will be impossible.

For instance, your average position errors were probably due to
under/overshoot and a too heavily dampened system with too much gain.
No computer program is going to improve that.

It is entirely doable, check here
"http://forums.parallax.com/forums/default.aspx" for ideas on how to implement
your project using a Basic Stamp...
I would do it with digital position sensing, with an lcd display showing
direction of antenna..

Richard,
Agreed on the suitability of an analog solution... I certainly made some steps toward critically damped operation. My circuit design was bad, though.

I didn't have a very analyzable problem; the rotator rotates one of those fiberglass surplus military masts with respect to another, so I get a lot of stick-slip, especially if there's a breeze (there are 12 feet of mast above this thing).

This is not to say a suitable set of P, I and D couldn't be found, and it would have been pretty slick if I'd set up right for empirical loop tuning, but I hadn't done that. I got pretty close by soldering components in and out.

I would have had a better time with a real multiple op amp circuit with a knob for each of P, I and D.

I think you hit the nail on the head regarding too heavily dampened with too much gain in the antenna rotator case. I just couldn't really tune the thing.

In my case, I just decided to throw up my hands and go to the simplest method so I could get on the air with a rotating antenna. I have a quite successful analog servo going every day with my remote antenna tuner (www.n3ox.net/projects/servo). That one is ever-so-slightly underdamped, proportional only, and works nicely. There's a little bit of hysteresis and it certainly could be improved, but I stopped at the good-enough-for-daily-operation level.

I guess what I meant by "going digital" was that depending on whether you're more comfortable with programming than a soldering iron (not me!) you might think about having a simple motor drive circuit and implement the admittedly complex PID loop in software/firmware.

You're absolutely right that you can't do this if you don't know how to do the analog...

Dan

==========
Talking rotor position feedback ,instead of the traditional potmeter in bridge circuit with analogue meter readout ,you could try a low cost synchro system utilising 2 stepper motors from discarded hard drives , dot-matrix printers or flat bed scanners ,with 1 stepper motor mechanically coupled (either directly or via a reversed rotational reducer) to the rotor ,the other in the shack as a readout device. The circuit I found on the web (via Google)needs 5 wires between the stepper motor coupled to the rotor and the control unit ,located with the other stepper motor in the shack.
The circuit includes 4 TIP120 NPN transistors 2 LM324 dual Opamps and a few diodes and resistors. The stepper motor in the shack could either be provided with a rotating or sliding pointer (the latter from an old 1950-60s radio) , or be mechanically linked to a counter (for example from a discarded tape recorder)

A potential 'recycled components' project.

I thought someone here was selling tickets for over a hundred bucks- perhaps
this is for vendors?

$25- is half what it costs to get into AWA antique radio conventions for
it's true that's not too bad. Hosstraders IIRC is still like $12- though :).
I usually go in the Fall as it's not far for me.

Slow,
It's is a shame you have to:

1- talk like this and
2- have so little respect for others and
3- have no ability to rationally discuss prows and cons complex issues and
4- have a poor understanding of what makes a good ham and
5- have so little understanding some real-world practical aspects of this issue and most importantly...
6- show such poor ham characteristics.
7- and probably have so little real knowledge of ham radio, is my guess. and
8- be a troll

If you're also a 20 WPM extra, then we can easily do without your immature attitudes and behaviors here and on the bands.

Hey guys! it is also a shame you get drawn into these types and feed their small minds.

73, Steve, K9DCI

Hi Tim,

My electronics skills are fairly good, I have built many projects over the time.
What I was wanting to do, is have a control box in the shack with a readout and left/right controls. And have the provision to also be able to have a PC control it.
I like the Pitch-prop motor, as it is strong, and can be controlled easy.

The way I control it at the moment, is via a 2 voltage system.
The pitch-prop runs at 36volts for full speed, and when I wish to slow it down for small movements, I use a second set of controls at 15volts. Not the best way of doing it, but it works.
I then look out the window and see where it is pointing. I know where N, E, S, W are on my section.

As to price on the parts, I would like to keep it down to around a couple of hundred dollars. :)

Regards and thanks for your input.

I wouldn't go quite THAT far BUT.... :D

> > Do the $$$ homework boys - you guys that run these ham events
> > are screwin yerselves faster than Barbaro broke his leg last week.

This not only goes for DARA, but also for the local Ham clubs as well.

Furthermore, the local clubs need to wien themselves off of using the local county fairgrounds for their hamfest site too. Problem is, where could they go besides renting out a sizable chunk of the local flea market that EVERYONE (Hams and non-Hams alike) go to?

Cheers & 73 :)

I have decided to do something that some would consider to be a little off the wall. :)

I have decided to put ALL of my Field Day Activities on my website via my cam site. It'll be LIVE and archived in Windows Media format. If possible, I also plan to run a SHOUTcast & Streamer P2P stream as well via Jeeper One Radio, my Talk/Old Time Radio station. It too will be hopefully archived and will probably run in repeat during the overnight hours on Saturday Night.

I plan to operate mainly on six meters USB and probably FM should there be an opening. If not, then I'll probably be band-hopping between 6 and 2 USB & FM with maybe a smattering of 432 USB and/or 446 FM if in the event there is NO six meter opening (Being a no-code tech, I am limited to bands 50 Mhz. and above).

It'll all officially start Saturday June 24 @ 12:00 NOON Mountain - 2:00 PM ET, 8:00 PM GMT and end Sunday June 25 @ 12:00 NOON Mountain - 2:00 PM ET, 8:00 PM GMT with breaks for sleep, meals, and times which the bands just simply are not open and idle.

The websites for everything in question are as follows....

WEBCAM - http://www.freewebtown.com/kb0oxd/webcam.html (Also simulcast on my videos page @ http://www.freewebtown.com/kb0oxd/webcam2.html)

JEEPER ONE RADIO - http://www.freewebtown.com/jeeperone/radio/ (Click on the LISTEN LIVE link)

Hopefully there'll be an opening on six. If not, well then, I guess I'll just be working the locals I suppose. :)

I'll also be logged onto EchoLink and eQSO for those informal non-FD off air ragchew chats with Hams (especially those out in the field with WiFi access). :

So again....That's Saturday June 24 @ 12:00 NOON Mountain till Sunday June 25 @ 12:00 NOON Mountain with the breaks I mentioned above. Feel free to tune in and log on. :)

Cheers & 73 :)

Hey Kevin:

http://www.wescottdesign.com/articles/pidwophd.html
http://www.wescottdesign.com/articles/Friction/friction.html

If you want to control it from a PC I'd suggest that you drive an H bridge from a microprocessor, with a PID controller in there to make it go. The biggest key to making a PID loop without doing a bunch of math is to keep your ambition under control -- if you have to go fast, then you need to delve into theory.

As pointed out, PID control can be tricky -- even though I'm a control systems professional there's a good chance that if I did it rev 1.0 would just use the micro to implement virtual buttons, with feedback control for rev 1.1. You definitely want to make sure all the pieces are working before you close the loop.

Source record: 9485

Hello I'm really new to Qrp and I have, I think, a simple question.
It's common to find kits or schematics for Qrp trasmitter.
But I've not find any mention how to operate a unit composed of a
separated receiver and transmitter. For example I've a simple receiver
like a Sangean or Sony ICF-7600 with SSB.
I'm able to decode CW with these receiver, with some difficulty but
it's possible. Suppose I've a qrp CW trasmitter how i could manage the
Trasmitter / receiver switching. I think I must use a sort of t/r
circuit to isolate the receiver. I internet I've not found anything
about a simple setup like this one.

Thanks and excuse for my poor english

Yes, Yes, yes,
but what are your thoughts on the following:

No more automatic renewals. Individuals must retest and pass
all elements required for their license class.

The passing score for written exams needs to be raised to 85%.

Code elements should be 13 wpm for General, and 20 wpm for Extra.

Make the no-code Tech license one year non-renewable.

sc

Slow Code <email@no.spam> wrote:

>Yes, Yes, yes,
>but what are your thoughts on the following:

Meta-comment: I think that if all of the ideas you propose were
actually enacted into regulation, and then ten years were go by, the
United States Amateur Radio Service would be unlikely to have more
than 1/4 of the number of licencees that it has today.

That's great if you want to create a "private club" for a few years
after that.

However, it's lousy if you want there to actually *be* an Amateur
Radio Service twenty or thirty years from now. With so few licensees
and as little activity as I think there'd be after such a decimation,
the odds are good that a lot of the U.S. amateur radio bands would be
"re-purposed" for other spectrum users.

>No more automatic renewals. Individuals must retest and pass
>all elements required for their license class.

Unlikely to pass, due to the cost and bureaucratic overhead.

I'd guess that at least a third of current licensees coming up for
renewal would decide not to bother, and let their licenses lapse (and
that's in addition to the rate of non-renewal which takes place today).

>The passing score for written exams needs to be raised to 85%.

I'd have no real objection to this. Dunno if it's a good idea or a
bad idea.

>Code elements should be 13 wpm for General, and 20 wpm for Extra.

This will never happen, for two major reasons:

[1] CW is no longer an international treaty requirement AT ALL.
The results of the WARC conferences made it clear that the
international community considers CW a useful mode, and a big
part of amateur tradition, but that it's no longer in sufficient
use in military/commercial applications to justify making it
a legal requirement for amateur HF licensing.

[2] The FCC has made it quite clear (in their responses to the
numerous petitions filed about [1]) that they no longer consider

it in the public interest to require CW proficiency for an
HF license. They are proposing to remove the CW requirement
entirely.

In its filings, the ARRL has proposed retaining the existing 5 WPM
requirement for Amateur Extra. The FCC's response adds up to "No.
Not justified. No CW requirement at all."

My understanding is that the ARRL's comments received from their
membership, and the comments received directly by the FCC in response
to the various petitions, are pretty consistent. Only a small
percentage of the people who have commented, feel as you do. Most
commenters either want to eliminate the CW requirement entirely (as
many other countries have done), or eliminate it for General and
retain it for Extra.

What you propose is also unlikely to happen because the FCC and ARRL
both remember what happened the last time they tried tightening the
rules and raising the requirements and trying to force people to
upgrade. My understanding (from reading - I wasn't licensed back
then) is that the Powers That Be concluded that this sort of incentive
licensing pressure created more resentment, and did more damage to the
health of the amateur radio community, than whatever benefits came
from it justified.

I've read statements from the FCC, over the past few years, to the
effect that they're just not interested in taking operating privileges
away from anyone.

>Make the no-code Tech license one year non-renewable.

Once again, I think that the number of licensees that the Amateur
Radio Service would lose (or would never get in the first place, once
people learned of the non-renewable status) would outweigh the
possible advantage of this approach (giving licensees more of an
inducement to increase their level of knowledge, and upgrade).

sc,

Lesee... Well, I believe you have some discussable concepts here.

In other areas there are currency requirements. Flying, for example. If
you haven't kept up, you need refresher flights with an instructor. We
first try to outline what is gained / lost over time and whether re-testing

can address these issues. Old timers will be required to learn about QPSK and all the modern concepts.

Then we go from here.

One general area you seem to fail to address is some of the practical aspects regarding number of licensees and the viability of retaining the Amateur Service all together. If the number of Hams keeps declining, will there be ANY licenses...and do you (in general) want to preserve something, or kill it all if numbers fall, manufacturers stop producing products, etc... This can not be ignored in the rest of the discussions.

I know Extras who couldn't build a thing, yet are active, intelligent and law abiding. They have interest I can discuss with them. I also know no-code'ers that are the most serious hams around...not to mention several that came from CB and are now died-in-the-wool-hams.
I also hear Extras on the air that should aim for a tree the next time they drive a car.

Is learning CW a "right of passage" and an effort that helps to strengthen the Ham...yes...for some. Does it guarantee an excellent, expert Ham? Not by a long shot. That comes from elsewhere.

However, based on the post of yours that I responded to, I choose not to go further since you have demonstrated such a poor attitude, I feel it is not worth the time exploring with you. Ill pick more important battles. Enjoy your Hamm activities (if you have any) and be content. you brand or devisiveness accompliches nothing except, perhaps allowing a few of the responders to vent and possibly hear (though by accident) some reasonable points.

Do you have a call, name? With a pseudonym like yours, I'd think you'dbe on the other side. What are you affraid of?

73, Steve K9DCI

> The passing score for written exams needs to be raised to 85%.

How about the licence grade depending on the score? How about much more strict requirements for on-air procedure. I hear many who have licenses and still don't know how to communicate efficiently in emergency drills or ID properly.

> Code elements should be 13 wpm for General, and 20 wpm for Extra.

CW only was a requirement due to international treaty in the first place. That is no longer the case. You are clrarly hung up on CW. WHY? What does it bring / guarantee? Why is CW so much more important that all other aspects of on-air operation?

> Make the no-code Tech license one year non-renewable.

This still comes directly from the "CW or nothing" concept.

Saluti, Paolo. Potete utilizzare un interruttore dell'antenna. Avete bisogno di un interruttore con tre collegamenti totali. Uno per la ricevente, uno per il trasmettitore ed uno per l'antenna. Quando vi sentite IN SENSO ORARIO e siete aspettate per trasmettere, passare dalla ricevente al trasmettitore. Molto facile fare questo senso.

Greetings, Paolo. You can use an antenna switch. You need a switch with three total connections. One for the receiver, one for the transmitter, and one for the antenna. When you hear CW and are ready to transmit, switch from the receiver to the transmitter.

Very easy to do this way.

73

2313. Suggestions how to fix a 2-m xcvr problem?

Newsgroup: rec.radio.amateur.equipment
Date: 2006-05-24 23:07:48 UTC
From: mcalhoun@ksu.edu
Message-ID: <e52p04$6m0@unix1.cc.ksu.edu>
Source record: 9399
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

NOTE: Crossposted to rec.radio.amateur.equipment and rec...homebrew.

For some years, I've had a Kenwood TM-251A 2-meter xcvr (with 440 rcv) hanging from the ceiling of my pickup truck, and recently the TouchTone pad (in the microphone) quit working and, while PTT causes plenty of RF output, there's no AUDIO output.

I'm pretty sure the problem is in the microphone electronics OR its 8-wire cord. I've "beeped" the cord from the telephone/data-like (RJ-45?) connector to solder joints on the mike PC board (it's quite a full little board!) and don't find anything wrong (but it's hard to hold a probe on each end and wiggle everything in the middle!). I'd replace the cord in a flash except I can't handle that %$#@! RJ connector.

The only microphone detail in the xcvr Service Manual other than the connector pinout:
UP
+8 volts (I measued +7.25)
GROUND
PTT
ME (Mike Earth?)
MIKE
RD (Read Detect? An output, perhaps for use with a TNC?)
DOWN
is the fact that PTT, UP, DOWN, CALL, VFO, MR, and PF are connected to three analog-inputs (and ground), thus "using up" four of the seven input wires and leaving just two wires (MIKE and ME) to handle the remaining 16 TouchTone keys AND audio!

PTT, UP, DOWN, CALL, VFO, MR, and PF do work as they are supposed to.

With "Remote Control Mode" ON, letter "A" on the TT pad is supposed to start frequency input from the keypad, but it does NOT. With an oscilloscope probe on the MIKE and ME wires, pushing "A" gives no visible change in the trace, but my jury-rig setup would probably miss a single tone-burst, so that is probably an inconclusive test other than the xcvr CPU didn't respond, either.

Any suggestions?

The book for it calls for a minimum of 400 watts out for 100 watts of
drive.

http://bama.sbc.edu/ameritro.htm

They are not using a tuned input so to match the tubes to a 50 ohm driver
they are using the resistor as a lossey input. About 40 watts or so are
being dissiapated in the resistor and 60 or so are being used to drive the
tubes.

Look for a Cat5 computer LAN patch cable; cut off one end. It won't be
coiled but it will be flexible & the plug will already be there for you.

Hello Brian,

thanks for the suggestion. It's simple as I thought. I have the
intention to realise something like the vox circuit that si normally
used on the transverters.
The best I think is a separate unit with the possibility to switch from
rx and tx manually and automatically with the vox.

Have you checked at the rig end? I've had broken or intermittent
connections to the mic socket - the socket pins have poor soldered joints.

We generally stay at the Holiday Inn at one of the Sidney exits. $69 Thursday night (business rates), $59 Friday and Saturday nights. Can always get it, it's outside the sphere of influence of the Hamvention. 40 miles or so to Hara, but that goes by real quick. Sits right beside a Bob Evans restaurant, and across the street from a Waffle House, so breakfast is guaranteed to be good, which is all you need. Dinner can be taken anywhere near the Hamvention, then just drive back north. If you don't have an 8 mpg truck, its just fine.

It was an average orthodox Fest. Hams did not make it choke.

FT: Collins KWM-2A
I have a nice Collins KWM-2A Winged Emblem
It receives fine, But no tx?
I hear a relay everytime I key the transmitter,
but no power out. Also will need alignment.
Make offer or will trade.
Let me know what you have for trade and maybe we can make a deal.

Reading all you wrote, what you are basically saying is that no one wants to be a ham now days, so licensing requirements have to be low in order to help keep our numbers up. They won't work for a license.

My arguement has always been for the quality of the hams. You appreciate something more that you had to work to achieve, and respect the rewards it gives.

Cheapening something makes it disposable. Ham numbers are declining.

sc

you arguement is false

I value things based on their proifit to me

My tech license is higher profitable becuase it took little to get and
get me a lot
>
> Cheapening something makes it disposable.
how is making testing reflect reality cheapening?
> Ham numbers are declining.
becuase of age mostly

hams are litterly dying off

No I don't. Why is this particular idiotic thread in every major ham radio
group? It finally dropped out of DX, and now I find it in "equipment".
How about you children make your own little group, all climb into it, and
make each other happy.

I don't think that's entirely true. I'm working for my license.
Learning code, radio and antenna theory, SMT, and every other thing I
can think of. Got an ARRL Handbook ('91), a cheapo hand key, and a G.
West test book. Do I think code should be required? Yes. IMO,
knowing what I'm doing is what being a ham is all about. Knowing code
is part of that. In fact, with the possible spread of BPL, CW may
again become the only way to punch through. If I just wanted to press
a button and yap, I'd buy a CB or a cellphone.

I get approx 27 mpg with my Subaru WRX and there's 3 of us to share the gas if I were all that uptight about the gas, which I'm not. I don't lose any sleep, I just go to bed before Jay Leno instead of after. And that's a pretty low rate for Hamvention weekend. Anyway, its only $8.88 for gas per day, which is just dirt cheap. Find a motel like Holiday (pool, hi speed access) that is closer for the $8.88. Unlikely.

As for the driving, I drove 550 miles to get there, and 550 back, so 40 is just not noticable...

Slow,
Can you address any of my comments in my previous, or here ?

> My arguement has always been for the quality of the hams.

OK. Given this, is it true that everything else is unimportant to you -
only the quality? [there always have been jerks around.]

> You appreciate something more that you had to work to achieve, and respect
the rewards
> it gives.

I think I can agree with this. Give a kid a car or whatever, and he's
more likely to treat it badly. Make him work for it and he appreciates the
value and shows the appropriate care with it..

> Cheapening something makes it disposable.

Yea.... I understand that having to do the CW thing is more work and
more likely that the licence will be valued, but what about putting the
prospective ham through other, more rigorous hoops, like electronic theory,
emcom, etc. Why won't more modern "hoops" work the same way to bolster the
individual's respect for the service?

> Ham numbers are declining.

I believe this is true, but what is you reason for stating this? Are you
glad this is happening or sad or indifferent?

The numbers don't matter, quality does. Reasoning a service is good because it has lots of members, CB should be great then, but it's like a kindergarten.

sc

2355. I was going through about ten years of ham catalogs, and I noticed a disturbing trend.

Newsgroup: rec.radio.amateur.equipment

There's an increase in recent years of ham gear Retailers offering an expanding amount of citizen band radios and related products.

So Retailers have seen the changes in the type of people that are making up and will be making up the US ham population, and have modified their inventories and marketing to stay in step with it.

Gotta keep selling them radio's, Ten-Four?

I have about 15, KENWOOD - UHF - mobile model TK-862/TK-862G units for sale.

They are all very clean and in LIKE NEW condition. They come with the Kenwood mic.

Click on these links to see pictures:

http://imagehost.epier.com/35528/kenwoodtk-1.jpg

http://imagehost.epier.com/35528/kenwoodtk-2.jpg

http://imagehost.epier.com/35528/kenwoodtk-3.jpg

http://imagehost.epier.com/35528/kenwoodtk-4a.jpg

http://imagehost.epier.com/35528/kenwoodtk-5.jpg

For specifications on this unit click on this link:
http://www.bandtcom.com/762.pdf

They were recently remove from service in cars so they are very clean.

The price is $95 each plus $11.85 shipping in the lower 48 states.

I will ship world wide.

If you want one or more of these very nice radios, please email me at:
rfpexec@yahoo.com
(rfpexec at yahoo .com)

Thank you for looking.

Bill

>
> Any suggestions?

Our local university club had one of these that was flakey as well, it had
been hit by lightning and both receivers worked, but from the testing I did

on it, the ptt no longer worked as ptt, one of the freq change buttons now worked as ptt, but locked on when pressed once, then turned off when pressed again. The other buttons on the mic were similarly mangled up. No one wanted to spend money to actually fix the piece of junk, so it just got shoved in a box and stored away. Good luck on getting yours running, I was not impressed by the recieve audio, and with the transmit problems with the one we had I never did listen to its transmit audio.
thanks, John.

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.ourmedia.org/node/229696

CHECK OUT BILL'S NEW Gadgeteer Blog:
http://usgadgeteer.blogspot.com/

Topics discussed in SolderSmoke #23:

-- Mike solves DSB rig problems
-- Low frequency parasitics
-- More on ladder filters
-- Adjusting SSB rigs
-- Listening to ham satellite from India
-- Monitoring aircraft radios from the kitchen
-- London Amateur Television
-- 747s as high band passive reflectors
-- CW advantage? SSB advantage?
-- MAILBAG (with new GONG!): Mark, KA6WKE; Merv, M3LYJ; Terry, WA0ITP; Jack, G3PVG; Nigel, M0NDE; Paulo, CT1EFL; Mike, KD5KXF.

Listen at: http://www.ourmedia.org/node/229696

Background:
Tired of listening to Led Zepplin or NPR on your I-Pod? Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in London, England meet regularly on the ECHOLINK system to discuss their homebrew radio projects. We are making them available as PODCASTS.

NEW RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software. We've been having trouble with our Ourmedia RSS feed, so Mike (software wizard that he is) has homebrewed his own RSS feed. In order to subscribe to SolderSmoke, point your podcast software to:

http://kl7r.ham-radio.ch/soldersmoke.rss

If you don't have an MP3 player you can just go to the site below and listen to the latest program (and earlier editions) using the audio software on your computer.

http://www.ourmedia.org/node/229696

Here's the homepage for our show. All our programs are available here. There is also a blog and links to some of the sites and documents we've been discussing: http://www.ourmedia.org/user/36170

We hope you enjoy the program. Please send us feedback.

73 from London

...for fixing up your old Heathkit HW-16. Pics, details, and order at
www.hayseedhamfest.com .

Easy to install - If you can put on a postage stamp, you can install one
of these.
Pre-cut holes and voids.
Self-Adhesive doesn't "stick" until you're ready for it to!
Durable - 6.4 mil thick.
Colorfast - Uses outdoor-durable solvent-based inks.
Abrasion Resistant - Thin, clear, laminated layer "seals in" inks.
Easy to follow instructions.

Tnx for looking and 73,
Tom N&#65533;JMY . .
www.hayseedhamfest.com

2372. IMMATURITY On 14.275 Mhz. USB

Newsgroup: rec.radio.amateur.equipment
Date: 2006-05-28 02:01:01 UTC
From: "kb0oxd@gmail.com" <kb0oxd@gmail.com>
Message-ID: <1148781661.472089.196760@38g2000cwa.googlegroups.com>
Source record: 9358

Hi everyone:

Is it just me or has there been a tremendous amount of immature 11 meter-like activity on 14.275 Mhz USB??

I say this because I can [b]hear[/b] it with my ICOM IC-706 MKII-G and my mega-cheapo coathanger setup that I threw together which is plugged directly into the back of the radio.

Even when there have been legit QSOs on there, some a--hole Or a group of a--holes for all I know) would find some excuse to get on that freq. (or very close to it) and cause malicious QRM.

If these are licensed Hams, then they deserve to lose their licences. If they're bootleggers, I just hope they've got an IRA or two 'cause they'll need it to pay off the FCC.

To give you an example of what I've been hearing, I've heard just about anything and everything ranging from silly PC-originated sound effects to (Not even a half hour ago now) old Rocky & Bullwinkle clips.

If this is old hat to you old timers on the HF bands, then please excuse this post (I'm fully aware of the mess known as 14.313 BTW). Hopefully Riley Hollignsworth is monitoring over there and is taking action. ;)

If i can, I'll do a short video or two sometime (I'd rather do a video as then people will actually see what freq. the radio is tuned to as the cam will show it) with my Logitech QuickCam STX as its got a pretty good built-in mic so I don't need to stretch a long cord to plug to the line in jack. :) I'll then either send them to Riley via email or put them on a live page on my website for THE WHOLE WORLD to see and hear.

Gee....That's not a bad idea. Maybe if a few potty mouthed Hams found themselves on some Ham's website in a negative light, they just might change their ways before[b]Rilley[/b] catches them. ;D

Then again, if they're anything like K1MAN, they probably wouldn't even notice....

Anyhow...Just wanted to post a heads up for those of you who haven't been listening. :)

Cheers & 73 :)

Read the previous replies to your question.

The answer, again, is that NONE of them are "legal" for you to
transmit on as long as you do not have your amateur radio license.

GET YOUR LICENSE. Learn what the heck you're doing. You're asking
for big trouble from your local federales otherwise.

Gerry,

Personally, I would concentrate on the effect of the magnetic field as a trigger of brain malfunctions.

High RF fields tends to create sunstroke symptoms if excessive but high density H fields are known to even create visual effects like flashes etc.

Also, Scandinavian studies on the effect of high power lines shows that it's the magnetic field we need to be vary about.

As you might, or might not know, it's a common practice in Scandinavia to bury powerlines instead of mounting them on towers or pylones.

A lot of money and effort have been spent there and you might be able to use a lot of this material as reference material. The studies concentrated on possible cancer connections like Leukemia, which they found, but as far as I know, neglected to look into other forms of disturbances or anomalies like the effect on the brain etc.

Cheers

Dan / M0DFI

And even cheaper when you buy it at the Hamvention - same rig in the store a day later is $50 more...

>what kills hamfests is lack of interest

Sure, but the reason for the lack of interest is the crux of the situation.

>buyers of estate gear at dirp cheap prices
>that markup to sell on ebay and hamfests.

Some people gotta make a buck... But the Hamvention is coming back, I think - there were _definitely_ more people there than last year, and equal or more exhibitors both in the flea market and inside. We may yet get back to the state of affairs where there's 30,000 people coming to the Hamvention again, complete with a banquet and free buses, and buses to the motels. We can hope - its a great weekend.

We do need more ham radio gear and less outright junk in the flea market, tho.

I'm considering building a remote controlled balanced tuner. Some type
of low RPM motor 12V reversable motor is what I have in mind to accomplish
the tuning. I will have two fairly hefty variable caps to turn along with
a moderatly sized roller inductor.

Can anyone here recommend a particular type motor, and a reasonable
source for the the type of motors I need? Tnx.

A savings of $50 is a hill-o-beans when the
radio sells for 5G anyway and is buillt inside
like a cheap VCR (most Icoms fall into this category)

I was thinking more like a hi-end HT, at maybe $350 instead of the regular
price of $400.

>and is buillt inside
>like a cheap VCR (most Icoms fall into this category)

Not the Kenwoods I buy. I think ICOM makes some fine radios, too - they're
pretty well respected, and most everybody wants a 756...

My main rig is a Kenwood TS-850S. I am considering getting a back up rig for it.

Main interest is cw. Internal Antenna Tuner is nice. Bands higher than 10m not that important.

What models do you recommend that: represent good value, reliable, can still be serviced (if used)?

Will appreciate opinions on this.

Thanks & 73,
Russ K3Pi

Russ - Might suggest the Elecraft K2. http://www.elecraft.com In its simplest form an outstanding CW rig. Although its kit, some used units are starting to be found as over 5,000 have been sold.

Also take a look at the K1 and KX1.

My back-up rig of choice is my TS-440S/AT, and the back-up for that is a TS-130S. my main HF rig is a TS-480HX :-)

Try a Ten-Tec. Many Japanese rigs are designed for SSB, with CW as an
afterthought. Ten-Tec rigs, while they work perfectly well for SSB,
were, and still are, are designed with a CW operator in mind.

Their older rigs can be easily serviced, and they still sell manuals,
parts and fix them for you.

The older ones don't include tuners, but a modern external auto tuner will
work with them.

Geoff.

They will be left in the dust. I suppose those who don't have a
computer or don't trust online transactions could try setting up an
ether-based net using morse code. I suspect that it will be largely
one-way communications though.

Why not keep it in the Kenwood family? IMO, the
best value in a lowband rigs these days are the
TS-520, 820, and 830. These are all older rigs but
are repairable, lots of good info is available about them,
and they are inexpensive. No internal tuner though.
Good stability and performance as well.

My every day rig is a TS-830S, but I use an -820S
as well.

Just find yourself another TS-850. They are nice radios and retain
there value. Watch out for TS-440S they have numerous problems that
can be fix but something that you might not what to do. If you want to
stay in the Kenwood line TS-450 are selling fairly cheap and are a nice
radio and small or go for a Icon if you want to switch like and one of
the 706 series radios.

+1 bon the TenTec. You can pick up a great CW rig for a couple hundred
dollars. My primary rig in now a TenTec Orion, with a TT corsair II and
Argosy II as backup rigs.

My first TenTec rig was bought as a backup to my Icom 746pro, but its
receiver proved to be far superior to the more 'modern' 746.

Others have mentioned Ten Tec. If you go to their web site, you can request their used/demo list of older Ten Tecs they have taken on trade. They can be returned within 30 days if not satisfied. And Ten Tec still services anything they made.

I appreciate all the ideas so far.

I have requested the ten-tec list.

In reading reviews about various Ten-Tec models, there is frequent mention about failing PTO's and the need for rebuilding. How concerned should I be about this? Are certain models problematic in this regard than others?

In terms of various Ten-Tec models....any particular ones "stand out" over others?

I do have a TS-520S and agree that it is a very solid and reliable choice. It is in reasonable shape and I may put some restoration dollars into that as a "back up #2." I pulled it out of the closet after 10 years and fired it up yesterday. Works well on cw. Amazing how well it has held up after about 30 yrs. That was one expensive piece of gear for me when I was in college!

From: Reg Edwards <g4fgq.regp@ZZZbtinternet.com>
Message-ID: <mfCdnRdIn71fh-DZRVnyrQ@bt.com>
Source record: 9256

New Program : LINELEN.exe

This program calculates dipole feedpoint impedance, transmission line
input impedance, and balun input impedance, versus frequency.

Dipole and line can be of any length. Line Zo can be of any
impedance.

Power lost in antenna and line is calculated. Also overall loss.

In addition to its educational value, this program will assist users
to change line length when the impedance presented to the tuner is
beyond its capability to transform it to a resistive 50 ohms.

Download self-contained program LINELEN, file size = 53 K-bytes, from
website below.

> this regard than others?

ALL PTOs need to be rebuilt at some time. They work by moving an iron or brass core inside tube with a coil wound on the tube. The lubricants dry out, they become dirty, the gears wear. Ten-Tec is different in that they still rebuild PTOs for you, sell rebuild kits, and include instructions in their manuals.

Some people have had luck with re-lubricating them. Special bycicle libricant has been mentioned on the Ten-Tec mailing list of doing the job, it contians very small balls of teflon. Others have used WD-40 to remove the old grease and applying fresh.

It depends upon too many factors to make a blanket statment. If you are going to buy a rig, try it out. If the tuning knob sticks, the frequency jumps or "wiggles" when you touch the knob, it probably needs a rebuild.

My personal favorite is the model 544 aka Trition-IV Digital. It is well designed and simple to repair or maintian. The digital part is the frequency display, not the tuning. If the PTO is in good shape, it is easy to tune "spot on". A lot easier than a sythesized rig except for the new ones with 1Hz tuning steps.

It only does CW and SSB, but it does them extremely well. It is missing the WARC bands (they did not exist when the radio was made), and it has a fixed 2.4kHz IF filter. Options for it were a second VFO for split operation, crystals for the top end of 10m, a switched capacitor audio filter for CW, and a 160 meter adaptor.

If you like full QSK, it has it, you can hear what is going on between dits if you send slow enough.

I understand that you can pick one up for about $200 and up depending upon options, if it has been serviced recently, etc.

Geoff.

I do see a few Michigan plates around here, but most are New York,
New Jersey, and New Hampshire. There are also a few Ohio, Indiana,
Kentucky and Pennsylvania plates. Of course they've all left for the
summer, because its too hot for them.

> > bolster the individual's respect for the service?
>
> Yes, 85% passing score for writtens.

OK, 85% is another kind of hoop. but Please answer my "Why" question.

> >> Ham numbers are declining.
> >
> > I believe this is true, but what is you reason for stating this? Are
> > you glad this is happening or sad or indifferent?
>
> The numbers don't matter, quality does.

OK, so this seems to answer my other question. While I agree, that in
a perfect world I would also restrict licences to only those who have a
decent head on their shoulders...however, do _you_ trust _me_ to decide
whose head is good?

These are my last questions:
Do you believe:
1- CW and 85% on exams will prevent or seriously limit the number of

knuckleheads who sneek through?
2- That I am lying when I tell of some no-code techs that I personally know are the most serious, level headed and law abiding hams I know?
3- That I am lying when I tell you that I also know some very good hams who came up through CB and are just as law abiding when on the ham bands as anyone, just as serious about being good citizens, do emergency prep work and help others?

> Reasoning a service is good because it has lots of members,

[is incorrent reasoning] is what the implied completion of that sentence is.

I agree. There have been and are some pretty wacko organizations.
...but...

CB should be great then, but it's like a> kindergarten.
Is a gross generalization. How often do you listen? How many "CB'ers" have you recently talked to?

I listen once in a while just to see what's going on and be able to speak with first hand knowledge, and do hear some garbage, but I also hear of how it has helped in aread and ther ewere no hams around to help. Also, some areas have been worse than others,

1- I believe you have a limited view of CB [and no, I haven't been a "CB'er" but I have carried a radio on a few, I think two long trips where I would have trouble getting into repeaters for long periods.]. I have been helped by "CBers".
2- what percentage of CB users are jerks?
3- What percentage of hams are jerks? then...
4- What percentage of jerks makes the service bad?

My suggestions
CW optional as it is now for *ALL* modes, but remove from the tests...except possibly for Extra - my jury's still out on this.
85-87% on tests, but
Much more on propagation, antenna systems and emergency station operations and emergency communications and laws.

Then some others in the "if I were Amateur Radio Service God" department...
Currency requiremets like pilots that include familiarity recent developments.
Proof of license, and that you can understand, explain and operate at least 90% of the functions on a radio in order to buy.
If I wanted to be an old timer, I'd also require construction of something...knowledge of the history of ham Radio.
Then being more modern, something like proficiency in software, digital modes and satellite ops.
Gee, I should spend more time on these.... not. More important fish to fry.

Sorry, guys, I just couldn't resist a little chain jerking here.
73, Steve, K9DCI

At lease I got sc to answer a few questions ... sort of.

Well years back there were CB STORES everywhere, and places like Sears
and Wards sold CB's, not anymore. Someone has to sell them.
Very litle interest in CB these days, however its the only real way to try and communicate
with other drivers on the road.

The 27 mpg happens mostly on long trips. I might have been a bit optimistic to apply that number to the drive from our motel to the Hamvention, but I can get 24 doing it, if I don't hit the gas too hard getting on the interstate. Of course, the interstate is done on cruise control, and the area is flat, so no hill climbing, or not much, anyway.

This is a vanilla WRX, not an STI, and yes, I pass 'em all the time. Its just that I use cruise control a lot, at +7 of the speed limit, and that does pass some people. I mostly pass 'em when they pull off the road to whiz, get gas, eat, or one of several other delays that I minimize. I don't usually stop at all until the car needs gas. This seems to make for good mileage.

Back in the day when I got my Advanced, my Tech class Elmer pointed out that if you don't know the code, how do you know what repeater you're on?

Most automated identifications are still Morse code and it is still legal.

It is sad that Morse code is so under utilized. It is a testimony to the lack of interest in the greatest tool for weak signal work. If you have no interest in learning Morse code, than you affirm that your communications capabilities should be limited to voice capabilities. Who in emergency communications believes that their capabilities should be limited by a lack of expertise? Perhaps they believe that emergency commumications should be restricted to FRS? Rediculous!

Still, we see even avid DXers throw in the towel on a weak one when Morse code would have cut through the pile-up in a heart beat. A friend in High School made DXCC in 2 years on CW only, with a 100 watt radio and dipoles!

The fact remains that those who hate the code are clueless to its effectiveness. Their only defense is ignorance. Sad!

Looking for a 2m / 70cm transceiver, all modes preferred to permit SSB packet, which I've heard praised in this area (Oregon).

You on-topic suggestions as to a good voice/packet mobile rig would be appreciated.

You made good points until your last paragraph. I do not have the time nor
desire to learn the code. If I were to learn it long enough to pass the test
and never use it from day to day, then it will soon be forgotten. I think
that if a person wants to advance, code should be part of the process and
tested on a regular basis, but also have restrictions for those that do not
or cannot use code or the hobby will fade away. To do away with the code
would be wrong as it has it's uses, but to expect everyone to learn it keeps
fresh blood from entering into a noble but dying hobby.

No. If they're too lazy to learn CW they can stick with CB, FRS, Cell Phones, and two tin cans with a piece of string in between.

Maybe you have a few CB buddies you'd like to see get licensed, and dumbing things down will help, I don't know. Outcome based licensing. No one wants to be a ham if they have to work a little harder for the license and so no one wants to support having a good test to get one.

Another self proclaimed superior ham perpetuating the myth that CBers are
too dumb to pass the test. Keep that rift between hams and CBers and your
hobby will die an agonizing death. You have yourself to blame.

"An enforced set start time makes it more fair, as Extravaganza and
Charlotte have
proved. The other two should consider that... "

Well said....the greedy bastards who shop before the starting gun have
been responsible for more people not coming back than anyone wants to
admit.

And the clueless sellers who feed these buzzards are fools since it is
clear that they could get more money for thier wares if they would wait
till the starting time and raise their prices.

I got an amazing 39+ mpg from a 2.3L FWD Ford Tempo once, headed over
White Bird Hill into Grangeville, Idaho. Three weeks later the
transmission bit the dust.

Hi!

SSB packet on 2m and 70cm? Maybe at 300Bd? Must be very easy and
efficient...

As far as I remember, no mulimode dual-band mobile rig was ever produced.
Actually you only find IC-706 and FT-897 type mobiles with multimode
abilities on 2 and 70.
And exit the monoband multimodes such as kwd's TM255/455 (no more
produced)... For mobile action I'm using an old Yaesu FT-7100, which I also
use for 1k2/9k6 packet with a TNC2-Multi (IfD, Germany) or a homebrewed
soundcard interface and modern Software (Flex32, Paxon 2.00.1114, WPP 3.18,
Soundmodem, under WinXP).

I think that in the USA, where 9k6 packet is a vague idea and TXDelays are
sooooo looooong and fast switching is of no need, an IC 706 would do the
job.
But I would recommend to take a rig with a miniDIN (sort of PS2) plug for
packet/digimode action, so not really the Icom 706 brand.

The miniDIN tends to be a standard plug-and-play feature for most modern
TNCs and digi-mode controllers.

And I'm quite sure you wiil need som links:

http://www.uspacket.org/
http://wpp.dc6hb.de/
http://www.afthd.tu-darmstadt.de/~flexnet/
http://www.paxon.de/

I intensionnaly do not give the paths to AGWPE or Winpack... I let you guess
why.

If you are interestd in APRS, you can install WPP or use UI-View with AGWPE,
but for Heaven's sake, do not use any AGWPE version for packet radio! The
sysops and your packet mates will praise you.

73 de F8BOE Olivier ...-.-

You sure don't! Also a very bad assumption and groundless..Also wrong,
not to mention irrelavant to my words and position. I said that I already
know *HAMS* who came from the CB side (only because they either told me
directly, or I overheard then discuss it on the air) ---whom I met as Hams.
They are top notch hams in every way.
I don't do CB, but have an old Morotola 40 CH AM unit because I want to
have as much communications capability to handle any eventuality in an
emergency. It would have been helpful in a serious malicious repeater
interference situation a number of years ago when I didn't have even 27 MHz
receive capability and it heloed solve and catch the perps.

> Outcome based licensing.

You'll have to explain the meaning of this.

> No
> one wants to be a ham if they have to work a little harder for the license

False generalization " On one..." and "harder" than what?

This was dis proved by one of the posters responding to you who said somethin like he wa looking forward to learning CW etyc... Unbeknownst to you, there are people who do value things for their own sake and will enjoy the feeling of self accomplishment..

> and so no one wants to support having a good test to get one.

Well here *IS* one. I support a much harder test in the areas I previously outlined. I *DO* agree that the CW hurdle can be one which makes us value the license to a significant degree...HOWEVER, I believe it is not the ONLY thing which can have this effect, as you appear to believe. I do do CW, enjoy those contacts, marvel at the ability to QSO with any country / language with it and feel (alittle special being) part of an esoteric group that knows it. However, it doesn't make me a better person simply because I know it. My value derives from a deeper value.
Knowing that Hams were a VERY significant factor in communications for 9/11, the SE Asia tsunami and Katrina makes me feel good and I bet there were many code-less hams involved.

I'm a "techie" and would love to require everyone to build something and explain something regarding electronics in much greater depth than on the current tests. I also KNOW that this will not guatantee an all around "good" ham. I also enjoy the diversity of those I meet on the air that aren't Electrical Engineers or Technicians.

I think that if your position was valid there would haave been no jerk hams in the past, when CW was on all tests.

Why was Knowledge of Morse there in the first place? Understanding this in full context is, I believe, critical to cussions on this issue.

If you can't conceed that any of my points have any validity, than so be it. It is your right. But I find you very closed minded and unable to intelligently discuss a complex issue in a mature way. It is your right and I'll also deffend your right to have your opinions. If for no other reason, it allows me (and hopefully others) to more firmly and intelligently form and understand mine.

73, Steve, K9DCI Always willing to show my true identity. and hopefuly express thoughtful and well reasoned viewes along with correct and understandable technicial explanations for others.

found this old Realistic Pro-45 "beast" of a scanner and it amazingly works.
it's an eight channel scanner that uses crystals.

currently a local 2-meter repeater is the only active frequency in my area.

can somebody help get or sell me some crystals and/or the manual for this
radio?

the crystals i'm looking for are:

148.525mhz
150.100mhz
154.935mhz
154.620mhz
156.800mhz
162.400mhz

please reply by email.

thanks!

2467. System Saber RSS Programming problem

Newsgroup: rec.radio.amateur.equipment
Date: 2006-06-03 05:14:03 UTC
From: **THE-RFI-EMI-GUY** <rhyolite@nettally.com>
Message-ID: <vU8gg.16277$cB3.13711@tornado.tampabay.rr.com>
Source record: 9303

I have a CON 6 System Saber I am trying to read with version R3.00.2 and although it passes the serial COM test, it gets hung trying to read and reports "Could not acquire busy line" etc.

My dedicated radio programming computer is a genuine IBM 486 25 MHz and is tried and true on various RSS including "plain" Saber, so I doubt its the set up, I tried a spare RIB box, tested a plain Saber (works) and am stumped. I even trimmed my config.sys amd autoexec.bat. Yes I am using DOS 6.22.

Could it be that CON 6 (1995 vintage radio) is too new for this 1992 software? Version R3.00.2 is all I have to work with.

Any help would be most appreciated.

"Morse or Re-Morse" <see@double.you> wrote
> Radio Shack. You got questions, we got blank stares.

My 17 year old RS Optimus speakers gave up the ghost. I went into
a Radio Shack and was told that not only does RS not sell speakers
like that anymore, but speakers with one tweeter plus one mid-range
plus one woofer were not even manufactured anymore and that it
takes half a dozen modular speakers to set up a system nowadays.

I went over to Fry's Electronics and found exactly what I was
looking for from Cambridge Soundworks. The woofer only goes
down to 40 Hz but for my karaoke system, that's good enough.

I have a very clean Kenwood TR-9130 2 meter All Mode Transceiver with the Communications Specialists SS-32P Tone Board Installed. This little rig works great. It puts out 25 watts or 5 watts.
The readout is clear and bright green. It comes with the mobile mount, power cable, mic, and original manual and instructions for the Tone Board. This transceiver has very low hours of use. It shows almost no wear. Cabinet and Front Panel are near perfect. Price is $200 plus shipping.
Thanks, Charlie Hugg

SolderSmoke #24: ROCKBOUND HB SSB, Two tone mp3, W1FB amp, SlimGem amp, ELSIE, Book review, Mailbag

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.ourmedia.org/node/231317

Topics discussed in SolderSmoke #24:

-- Mike's rockbound SSB success!
-- Two tone tests via mp3
-- W1FB 40 db amp strip
-- HF Packer SlimGem 5W MOSFET amps
-- ELSIE filter software
-- BOOK REVIEW: "From Crystal Sets to Sideband"
-- HF+6 diplexer
-- MAILBAG: Jerry AA6KI sends in "Lamp Talk" cartoon; Mike WA6ARA on VO-52 as a good QRP satellite.

NEXT EDITION: Bill will be using an Astatic D-104.

Listen at: http://www.ourmedia.org/node/231317

Background:
Tired of listening to Led Zepplin or NPR on your I-Pod? Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in London, England meet regularly on the ECHOLINK system to discuss their homebrew radio projects. We are making them available as PODCASTS.

NEW RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software. We've been having trouble with our Ourmedia RSS feed, so Mike (software wizard that he is) has homebrewed his own RSS feed. In order to subscribe to SolderSmoke, point your podcast software to:

http://kl7r.ham-radio.ch/soldersmoke.rss

If you don't have an MP3 player you can just go to the site below and listen to the latest program (and earlier editions) using the audio software on your computer.

http://www.ourmedia.org/node/231317

Here's the homepage for our show. All our programs are available here. There is also a blog and links to some of the sites and documents we've been discussing: http://www.ourmedia.org/user/36170

We hope you enjoy the program. Please send us feedback.

Collins KWM-2A Transceiver
Needs work. Plugged it in and lights up and no receive or transmitt.
I looked inside, and see no crystals in it. It's a fixer upper or
parts radio. Cabinet needs repainting,etc.
All parts are in it. Don't see anything missing, other than crystals.
Make offer or let me know what you have to swap for it.
ritchi50@optonline.net
To see picture look on qrz or qth

2479. Drake R-4C Receiver NB/Filters/Cables

The FCC is not requiring specific testing for PSK31, RTTY,
Hellschreiber, Olivia, etc. and all those modes seem to be used pretty
extensively on all the bands. Not to mention, programs like MixW and
especially MultiPSK do an excellent job of sending a receiving CW. I see
all the modes continuing to flourish in the future even if a specific
test for one mode (CW) goes away.

2482. Re: APRSpoint: memorial day special

Newsgroup: rec.radio.amateur.equipment
Date: 2006-06-04 14:17:11 UTC
From: "J. D. B." <duffyb01@nospamfuse.net>
Message-ID: <dfb25$4482eb71$d06640f9$8963@FUSE.NET>
Source record: 9318

The only issue with APRSPoint is that support and upgrades are sorely lacking. The Yahoo group he runs is censored so that any suggestions or criticisms of his product are not posted. He needs to really upgrade this program. It is one of the most expensive and also has the least amount of features. Nice start, but the author needs to really spend some time getting this program up to where all the other APRS programs are in functionality.

The newest one is very good, I think. This is the first time I"ve read
chapters all the way through. I am re-entering ham radio after a long
absence.

I think the technical writing varies among chapters but on the whole is
quite readaable without being "dummied down". This is more difficult to
achieve than it sounds. Technical writing CAN be an art, though it
seldom is. ARRL editor deserves a lot of credit.

There are probably fewer homebrew projects (or at least they are
simpler) than the old days. But, there seems to be more info for
building than I remembeer...ordering PC boards, sources for parts, etc.
I think blending them into the theory within chapters is a very good idea.

That's my $.02 worth.
John

Even if I could learn the CW, I'm too stupid to pass the written test.

I have this congenital problem, you see. Life is NOT good for me.
I suffer from Microcephalic Dwarfism and I've been afflicted with it since I
can remember.
Definition: These syndromes associate growth retardation with
microcephaly and various facial anomalies.

My forehead is smaller than that of a normal person and my cranial cavity is
little larger than that of a Florida orange. My sloping forehead has only
one advantage in that it allows me to insert it into my rectal cavity with
little or no pain. While less than comfortable, and while it impedes clear
speech I am able to keep my ears warm in the coldest of climates, but those
are the good points.

I have suffered from extreme retardation all my life and have recently been
considering placing my head in the oven. I am betting that the accumulated
yeast in my mouth will aid me in blowing my head off at 350 degrees, thus
ending it all.

You guys have no idea of what torture it is to live with my afflictions. You will miss me when I am gone.

Thanks for that John.
I haven't seen the latest issue, but have a 1995 issue. It has a number of construction projects, but certainly fewer than the older issues. And those that it does contain are solid-state related. I guess that falls to the modern times.
I'm specifically looking for projects and articles related to vacuum tubes and their uses in ham radio.

I totally agree that technical writing is an art, and should be practiced by someone who has a good knowledge of the subject being documented. Lack of knowledge results in confusing writings, which at times can be totally wrong. I develop computer software for the US Navy, and see more of that than you might think. No wonder those weapon system manuals cost so much to produce. Paying

competent tech writers what they deserve is an expensive task.

Thanks!@!!!

why me the ham to whom you repsonded?

none at all
why do you ask?

but it is clear from LONG term expousure to the cw Forever crowd many
of them lack much confidence that the mode can survive without the
stick of code testing to make hams try it out

futhermore if CW die it will be becuase of the atitdues of it's
advocates

2495. TenTec Orion FS

Newsgroup: rec.radio.amateur.equipment
Date: 2006-06-04 23:45:59 UTC
From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <XgKgg.35981$4H.28068@dukeread03>
Source record: 9331

I have for sale a TenTec Orion with the Automatic Antenna Tuner that is in Excellent Condition. I am the second owner and neither of us have used it much. It looks and operates like new. It did have a problem right after I purchased it and I sent it back to TenTec in February 2006. They went through it completely and fixed the problem and while it was there they did all the current mods to each board. I have all the documention from TenTec. It is completely up to date, except they installed the Firmware, Version 1.372.
That was current Firmware at the time, but they have since come out with a Version 2 of the Firmware.
This transceiver is loaded with all available filters. It comes with the original manual, shipping cartons, power cord, etc. I don't think you will find a nicer one on the used market. It is the best transceiver that I have ever owned, but I just don't operate it enough to justify the expense. Price is $2675 including the $330 worth of optional filters. I also have just about all the other optional accessories for the Orion and I will offer the Orion buyer first chance at these,e.g., TenTec mic, remote encoder/keypad, cooling fan that I never installed, matching power supply. Thanks, Charlie Hugg, K5MBX

Please help a newbie: what is SSB packet?
I am guessing data in one sideband with 2.5 KHz bandwidth or so?
I still confuse PSK and packet.

Mr. President?

Hang in there, soon the Congress will pass the constitutional amendment
preventing fags from having a piece of paper and all of this country's
problems will be solved forever.

Jawod-

For practical purposes, SSB and FSK Packet are the same, just different ways of generating the signal.

If you have an RF carrier and shift the frequency, you are switching between Mark and Space frequencies. A typical Packet TNC also puts out audio tones that can be used to drive the microphone circuit of an SSB transmitter. The resulting signal is equal in frequency to the carrier plus (or minus) the Mark and Space audio tones.

If you tune your SSB receiver to decode an incoming Packet signal, your transmitted Mark and Space freqencies should line-up with the received frequencies. However Mark and Space may be reversed. If it won't decode, switching to the opposite sideband and retuning should clear it up.

Both services have their place. I would keep the CB and install a
multi-band Ham radio such as the ICOM IC-706MKIIG or a Kenwood or Yaesu
and a multi-band antenna to match. You will find both an adventure.

> thjink?

Depends on how you feel about inbred hicks. If you're right at home with rednecks, white socks, and Blue Ribbon beer, CB may be your thing. OTOH, if electronic hole theory of semiconductor physics is more your cup of tea, ham may better suit.

Both camps can be serious as a heart attack about their equipment. My late FIL was an avid CB'er. He had the first Yaesu I ever saw. A $1600 model under a huge boom antenna on a rotating mast which he used to talk skip all over the country. His boat and car both sported illegal linears pumping top o' the line Cobras. I know he didn't know spit about antenna theory, and probably more importantly, didn't care. But, he knew who to ask and being able to do so on his rig is what it's all about, right.

While I, myself, was never attracted to long discussions with truckers about the merits of strip clubs or local gossip about the "new waitress down at Bubba's", I knew some of the local CB'ers and knew they were good people. CB, specially with respect to home stations, is just another mode of communication to them. This is more true in rural communities. The ham crowd, OTOH, by it's very nature of requiring a basic knowledge of science, tends to attract a more geeky element, a more literate slice of humanity. Not necessarilly better, or even smarter, just more educated and more into the technology of radio communications.

Try them both and then choose one or the other ...or both. Good people are good people, no matter the media.

You should go for your license. The additional privelages are quite
worthwhile. I will warn you that there are still quite a few inbred
hicks that got their ham tickets, unfortunately. The good thing is most
of them seem to be extra class, and are mostly older and will be gone
soon. It's a leftover effect of requiring Morse ability as opposed to
operating knowledge.

The problem with the newbys with nocode techs is that they don't realize
that knowing the code is just as important as knowing how to press the
on/off button.

Go here and download the free program MMTTY.

http://www.muenster.de/~welp/sb.htm

Set it up so your receiver is in the LSB mode, 170 hz shift, 45 baud (60 WPM).

Start tuning around 14.080 to 14.100 MHz.

There are lots of other sound card programs on the same site for other modes, but the MMTTY seems very easy to get up and going.

<X-Post canceled>

Replace?? no.....get licensed, *ADD* the HAM radio... start with V/UHF
dual bander, then as $$$$ and space permit, add an HF rig..... maybe a
TS-480
In my truck I run a CB, a dual bander, and an HF rig. The CB keeps me out of
trouble, and the ham rigs give me something to do.

I don't think you can really expect the newbies to want/desire to know that which they know may be being phased out soon. Why worry about learning it if they know it will soon be gone?

I am of the opinion that a 5 WPM at least - should be kept on as a requirement - as someday - it may be needed. Think not? Say you're in the midst of an attack - of terrorism, a war on our homefront OR a large scale natural disaster, a microphone isn't working or available. You can key the radio but don't know code - now what? With code, even at 5 WPM - you could get some very important information to those needing it to help save you - to them. You could tell them WITH code, what is needed, exact whereabouts, how many people involved, etc..... Just clicking a mic pin with a wire won't tell anyone anything and could delay any help or a response big enough to do much good. In these times with the large scale disasters as we've seen and attacks - even for any said to be planned, NOW is a good time to WANT to know code. IT may save you..... It is one of those skills you learn - just like CPR or whatever - you hope you never have to use, but you're glad you have it - when you need it.

5 WPM is NOT hard to learn or do. ANYONE with any interest can learn it in a month at most if you take x amount of characters a day and start using them. Many learn it sooner but it shouldn't take more than a month to get to 5

WPM. "I" know how I learned it but my method won't work for all, just as others didn't work for me. But the main thing is, you must "want" to learn it. If you were 16 and didn't want to learn to drive a car - plain and simple your driving days would be non-existant or very short lived at best- point being MOST 16 year olds WANT to learn to drive. YOU HAVE TO WANT IT.

Many of you may have heard of the Quecreek Mine incident in PA some time ago. A pipe was drilled down into the shaft. Those at the surface heard 9 taps on it, signifying there were 9 miners there. NOW - if any of those miners KNEW code, they could have gotten a message to the surface as to what conditions were exactly, the extent of injuries as best they could, etc. Maybe even instructions to help those on the surface plan their moves a tad better. Luckily, the 9 were saved but that is an example of just those 9 taps - crude MORSE - which sent a valid message. Were it not for that, no one would have known they were alive until someone may have went in. AND - MAYBE - those digging operations after a couple hours would have slowed due to lost hope. The fact they knew those guys were still alive gave them urgency to press on..... Code CAN have a place in your life.

One other thing..... I cut my teeth on CB back when the FCC was busting CBers regularly for violations. I then got into Ham and Electronics. ALL radio services "CAN" and "DO" have a place when it comes to chatting, information exchange OR emergencies. ALL groups "can" work in unison for the betterment of mankind if desired. Ham has it's place. CB was used mostly by those such as "Auxiliary Police" - where not everyone had to have a "code" much less a license to have studied for - to use radios for their purposes. SEAT-REACT when operated properly was as useful as the Ham groups for emergencies.
At one time, I belonged to REACT and some local Ham groups. I'm heavily involved in Public Safety - so I got the best of both worlds. The REACT team died and if I'm not mistaken, maybe the founding unit. Believe me - in a HUGE disaster our fire band was SWAMPED. Ham and CB alike WERE IMPORTANT. I had information on both coming to me - which was of enormous help. I was getting information that was not able to be had via the Fire Radio - due to it being so laden with traffic. I often use FRS radios now too - to avoid tying up the Fire Frequencies here. I USE WHAT I MUST to get the job done.

They all carry the same stuff, they all charge the same prices and
I assume they all have the same ability to stick an address label on
a box and hand it to the UPS guy.

So, other than the obvious need to minimize sales tax, what
contributes to your decision?

As far as I know, the 746 uses non-volatile memory and there is no
back-up battery.

Russell-

Do a google search for IC-746_Service_manual. It is 50 megabytes, so I
can't eMail you a copy! (It may also be available at www.mods.dk.)

I did a quick search, but didn't see a battery. It may use non-volatile
memory so a battery isn't necessary.

Same here. I appreciate having a storefront in my town and
I support it by shopping there. I haven't had any problems,
so I don't know how they take care of it?

Locality. I live and work within about ten miles of an HRO outlet.

On the down side, buying from them does involve state sales tax.
That's true even if I were to try to order through one of their
out-of-state outlets.

On the positive side, there's a lot to be said for having responsive
and near-immediate after-sale support. On a couple of occasions, when
I've been sold a radio or antenna which developed a problem within the
first few weeks after purchase, they've been quite willing to do an
over-the-counter exchange for a replacement rather than requiring me
to ship the product back to the manufacturer for warranty repair.
I've had enough *bad* experiences with warranty repair on electronic
equipment over the past thirty-plus years to find this to be a very
real and tangible benefit.

It's also a great place to run into people and hear interesting
conversations. They'll also give a small discount on accessories to
hamclub and ARES/RACES members, which makes up for part of the sales
tax on these items.

I do buy some stuff (small antennas, connectors and adapters, etc.) at
the local ham-oriented flea markets or at local electronic-surplus
stores.

Word of mouth (Internet reviews) is a good way. I've been doing business with Amateur Electronic Supply for over 30 years with no complaints. HRO is also excellent to deal with.

No store nearby. Last time I bought, I went for price since they all do NOT
have the same price. There are specials. You can, of course play the "but
so-and-so will-sell-it-fir-$x, how-about-you? ploy. There is consideration
for supporting the local guy or your favorite, however, if you have one.

Not by tapping. International Morse requires dashes as well
as taps (dots). There is a tap code used in prisons that will
accomplish communications under those circumstances. And since
more people have been in prison than hold an amateur radio
license, seems that it would make more sense to require knowing
the tap code than to require knowing International Morse code.

I haven't bought from AES, but I've bought from HRO both by phone and in stores when I've come across one. My impression is that HRO tends to have good prices on the big items but tries to make up for it by having higher prices on the accessories.

I've made on-line purchases from Universal Radio and from R&L -- based on prices of the items I wanted. I've also purchased small items from Lentini in CT and from KJI in NJ -- in-store purchases in both cases.

Hello,

I'm searching a modification for the CB President Jackson to bring it
up to 30 Mhz.
I've searched on internet but I've only found simple modification to
add "F" band and reach 271 channels.
I'm a regularly licenced Ham!! and I want to use it on 30 Mhz.

Anyone know other modifications.

Thanks de Iw3arv Paolo Italy

I sure with HRO had the same quality type catalog that AES has. I must admit that the catalog is a big reason I still purchase most of my ham toys from AES instead of HRO.

DUH - I KNOW THAT - I was just saying the tapping let the people at the surface know there were 9 people down there. MORSE CODE - "could" have relayed much more info if one of them knew it. REREAD my message.....

I am fully aware of what "code" is, I'm an Extra myself - have been for quite some time. I am also a VE Test Team leader.

Boy it's fun what a little trolling can do to my peers. I'm also an
Extra, and licensed for 29 years.

Code is worth what it can do, but has had less and less to do with the
hobby for decades. It's a great hobby within the hobby on HF, and was
the core of EME for years. It still is to some extent, but advances due
to moving up in frequency as well as computer based modes as low as 6
and 2 meters are making it something used for EME as much for fun and
stubborness as for usefullness. SSB is a very popular mode on EME now
among the big guns.

CW is dead as far as being needed. It's a great thing to have as a
skill, but is now as needed as spark.

The person who said they could key an HT to send CW was stretching it
way beyond reality. Ain't gonna happen, any more than someone will make
a spark transmitter by keying a big bunch of wire they wound in a coil
when trapped in their basement by touching it to the hot side of the
drop in their fusebox.

I'm not sure if you're referring to my post or someone else's who I didn't see. In "my" example - I was saying if a MIC was broken and they knew code, they could short out the tranmit pins - like making and breaking contact such as a key would do - to broadcast a coded message. It "can" be done. There is what is/was known as "Modulated CW". And, I've seen guys key an H.T. OR Mic and do code with an "Oscillator" with the other hand - thereby transmitting the code - from the Oscillator speaker through the mic of the H.T or radio. Maybe that is what "they" were referring to - I don't know.

Then too along with the above - they "could" have been referring to using the "key pad" to send code while the H.T. was keyed OR using the keypad on a mic while it was keyed..... If memory serves me correct - at the moment (slips at times) - THAT would be equivalent to MCW (Modulated CW). I've seen that done too.

For me, it's the application, the overall quality of the radios
involved, and how self-repair friendly it is. Price is about third or
fourth down on my list of considerations.

Part of the issue is that I'm an engineering tech for our state's
patrol agency. As such, I have need for radios that are legal to use on
commercial frequencies (as in Part 90 type accepted) as well as amateur
repeaters.

Motorola Spectra units filled the bill nicely. Durable,
programmable, reasonably inexpensive on the used market, simple to
operate once programmed, and perfectly legal for both Part 90 and 97
operation.

For HF, I usually go after the best I can possibly afford in terms
of retired commercial gear. Sunair, Collins, and Harris are all
favorites of mine.

I'm not keen on most of the dedicated amateur gear manufacturers
because you practically need a microscope to even see the components on
the circuit boards, let alone service them.

Keep the peace(es).

How do you send a 'dash' by tapping on a pipe? You
apparently could revolutionize prison communications
by providing an answer to that simple question.

no store within 300 milesof me... I watch the hamfests, and know what suppliers will be there (I prefer Memphis Amateur Supply), I will call them and give them a "shopping list" for the hamfest... I pay the hamfest prices, don't pay sales tax or shipping. I got a TS-480HX for $900 like that. Its also a good idea to peruse the other suppliers web sites about 3 weeks before Christmas for sales also... Got 3 Yeasu FT-7800R dual banders for $225 each, and free shipping to boot.

I seem to remember that the original Morse code was all clicks. I think the telegraph lines were DC current to electromagnetic clicking "receivers". The dashes were sort of implied by the spacing of the clicks...not that it matters to the antenna group, I guess.

The only thing good about the prison system of taps mentioned earlier in the group is that if you know the grid, you know the "code". Extremely inefficient, however.

Long live di-dah

Yes. It was an episode of the old Adam-12 TV series. Patrolman was injured in a crashed cruiser. Mic out. but he could click the mic button...the guy on the other end directed him to "click once if you hear me and twice if you don't"

Classic television: you had to be there.

How about a fast double tap on the pipe (or bar) to signify a "dash"? It's not an elegant solution, but could be made to work. Those guys are probably not gonna try for 30 characters per minute anyway.

Hello,

You wrote it Paolo, it's a CB rig and will always be it.
You should better invest in a real amateur rig, even low end, like an IC-718
TS-50s or Alinco DX-77T and keep your Uniden to monitor 11m or the beacons
on 28.200.

Hello,

Even for experimenting it will be a big amount of work to acheive it without butchering the rig... You'll need a lot of knowledge and an HF workbench to realign all the circuitry after Xtal swap and Eprom programing.
It can also be acheived by replacing the local oscillator by an external VFO. The biggest problem is getting a clean and stable rig with a basic rig that lacks both quality and good electronic design.

All is possible, but if I were you, I would rather spend my time and money in homebrewing the entire transceiver from ground up. There are many interesting mono/multiband and QRP projects around.

Not having a store anywhere nearby, nothing is nearby in Northeast Montana,
I not only need a good price but a place that can service what they sell.
Have always had good prices and great support and service from Burghardt's.
They always seem to have what I need, new radio or parts for older stuff.
Terrific staff that is always willing to answer questions or give advice.

Just my two cents worth.

Hi Bert,

For the small stuff (books, coax, replacement whips for my HF mobile antenna, etc) I buy from our local store, Texas Towers. For the big stuff, to avoid paying 8.5% sales tax, I shop the 1-800 numbers and web sites. I generally end up buying from Ham Radio Outlet (low price, excellent service, and free shipping on orders over $100). I bought an Icom 756 Pro 3 earlier this year from Marc's Amateur Radio in Florida for $2,850 (best price I could find that week). If I'd bought that rig locally, the sales tax would have been $242! I like to support the local shops, but the tax is a killer. Besides, stores like Texas Towers do a lot of mail order business from people like me in other states who don't want to pay their local sales tax. They aren't hurting in that regard.

73,
Dean K5DH

Now, that's an interesting piece of info because it's the 756ProIII
that I'm looking at.

I'd checked every on-line dealer that I could find and every one that
advertised a price on line (almost all do) showed exactly the same
price of $2999.99, although a few didn't explicitly mention free
shipping.

I'm in no hurry, so I guess I'll search harder :-)

Bert,
Wait for a hamfest to come around, find out what suppliers from out of your state are supposed to be there, call them and give them your shopping list. They should have it at the hamfest for you. no shipping, no tax, and the "discounted" hamfest price. :-)

During long boring meetings at an Aerospace company, my buddy and I would send Morse by pencil taps, sharp tap was a dit and a tap-scrape was a dah. Worked well until a new manager gave his fist talk assuring us nothing would change - we tapped out BS.

After the meeting, the new manager asked my buddy and I to stay for a moment after the meeting,

With a smile, he sed Hi guys -- I'm W⌿XYZ

Real call sign disguised to protect the guilty (;-)

For me, bigger is better -- I figure they got big for a reason.

Amateur Electronic Supply in Minneapolis ships promptly when I put an
order in -- I get the gear in days.

They pack it well; nothing's ever been broken.

And when I recently bought a $300 antenna tuner that did not perform
as I had hoped, they took it back, minus 20% restocking.

Besides, they also put out a gorgeous catalog that's free.

The local guys, besides the sales tax there, they don't advertise
their prices on anything, and don't appear to keep anything in stock.
So why let them mail order stufff for me, and add on the state sales
tax? Doesn't make sense.

The first Morse machines scribed the dots and dashes on a moving strip of paper. Operators of the day found that they could decode the sound of the scriber by ear, so the scribing machines were scrapped.

Try a Dunce Cap (low capacitance) attached to your screwdriver and
manually adjust until your dip meter reads moron :)

The problem with this joke is that the wrench exhists. Handedness in a
wrench is determined by which thumb closes the jaws. Right thumb right
hand wrench, left thumb left handed wrench.

I have a left handed crescent type wrench. Where was it made?
POLAND of course.

Wrench available for inspection.

2594. Note to Kenwood: Please bring back the TS-850s

Newsgroup: rec.radio.amateur.equipment
Date: 2006-06-08 02:12:22 UTC
From: Justin Case <ccccccccc3cc3cc2c@aol.com>
Message-ID: <nb1f82h3dafqmvsv29hqbd2btnfa6s9lup@4ax.com>
Source record: 9179

Dear Kenwood,
I've been reading all the reviews on your current ham radios, and one thing repeatedly comes up in the reviews. The Kenwood TS-450s is reported to be better than the Kenwood TS-570x, and the Kenwood TS-850s is reported to be better than the TS-2000. As a matter of fact many of the reviews have said the TS-2000 is down right deaf when compared to a Kenwood TS-850s, TS-870s, ICOM 746 Pro, and Yaesu Mark V. I looked at the Icom radios, but I thought they were ugly. The Yaesu radios have too many reported trips back to Yaesu repair, the Ten Tec Orion II is too expensive, so that leaves Kenwood. I can buy used, but it would be nice to have a new TS-850s. I've got the cash, the desire, and the will to spend, but you currently don't offer the radio to get my dollars.

Sincerely,

A U.S. Ham.

At 23, I took a job as a young engineer at a place that had previously been
a gyroscope manufacturer. As the new guy, they asked my to deliver a
briefcase to the boss' office and (you guessed it) there was a spinning gryo
in the briefcase. I got a big surprise when I tried to turn a corner in the
corrider and the briefcase kept going straight ahead! A great 'new guy'
trick.

It's true, that mid-range transceiver is getting rare.

I always wanted Ford to reissue the 1964-1966 Mustang. Can you imagine
how many they would sell !

As a used alternative, take a look at the Icom 746 (non pro). Lots of
features. 850 owners speak favorably about it. Read the 20 pages of
nearly unanimous positive review at eham.net reviews

Our local police are talking about getting all new radios "real soon
now", which means their old ones may become available.

But can we ordinary peons get the programming software?

Passing notes in school is how I first learned the code. Took about two
weeks to memorize all the letters so I didn't need a cheat sheet.
I never got caught though. :/

No.
I know a fellow who works in Tech support for a big computer company
who says they get questions likes this all the time.

There are several reasons the product has failed to meet your
expectations.
1- you have likely installed it upside down.
2- Your antenna is defective, the product is not meant to be used with
a defective antenna.
3- Exposure to weather has nullified your warranty.
4- There is an improved replacement product available and you may wish
to upgrade at a special price.

In case anyone is interested, the answer from Icom Tech Support....

"The IC-746 does not use a memory battery, it has non-volitile memory."

Thanks to all who replied.

The AM selectivity is terrible onthe 480x.

-6db at 5 kHz
-60db at 40 kHz!

That is going to suck when you tune to listen to shortwave broadcast

..and it is ugly.

Light blue letters on a black back ground is easier on the eyes than
black letters on an orange back ground.

What good's a hat if it don't keep the antenna dry? I think I'll keep it
though, for some odd reason my SWR's are better.

********** REPLY SEPARATOR **********

Your priorities are skewed. Since there are only so many hours
allotted to us, what would be a better way to spend your spare time:

1. Learning morse code for the above mike-failure scenario?
2. Stocking up food, water and ammo for the above mike-failure
scenario?

You have been reading too many stories of the valiant radio op on the
Titanic. Ain't gonna happen.

Bill, W6WRT
20 wpm Extra, but realistic about it

********** REPLY SEPARATOR **********

Your CB origin is showing. "Ham" is an adjective, not a noun. One does
not "get into ham", one "gets into ham radio".

10-4?

Seems the bullies are not all on SSB after all. Didn't the
Titanic's CW operator bully the California's CW operator to
such an extent that he turned off, turned in, and the rest
is history?

Gee, Bill. That's mighty specific. But since you brought it up. "Ham"
can be used as a proper noun: "I'm a Ham". Not everyone goes to the
trouble of saying "ham radio operator".

It's also a sandwich.

For conventional Spectras? Heck, Motorola will sell it to anyone willing to sign their Draconian software licensing agreement. Last I looked, conventional Spectra software was down to about $175.

Keep in mind, though, it's not just the software. You also need a RIB (Radio Interface Box -- anywhere from $25 to $100, depending on where you get it and which one you get). Programming cables for the Spectras are easy enough to make.

Worst case (shameless plug alert), there are guys like me who specialize in conversion of such radios to amateur service, and have all the tools necessary for programming and checkout. ;-)

Happy hunting.

Nah, not all of "us" or "you" in the case of your statement. I'm just saying a lot of crap is going on - on the bands today and its not worth even earning a ticket for - anymore. Ham radio and yes, even CB - used to be respectable at one time. How times change. Its hardly worth turning on the radio anymore. Especially on say 10 and 80 meters. But back to "your" statement, there are still "many" decent operators on both the Ham AND CB bands - out there. Ya just got to pick through the rubble to find them sometimes.

And NO, I"m not the "ONLY" "TRUE" Operator left........ Don't put words in my mouth, I certainly didn't place myself on any pedestal. Again - there are LOTS of decent operators out there. I didn't say "ALL" were bad - but there are - you have to admit - quite a few bad ones. Its gotten worse in the past few years.

I don't sign with my call. Some like to - that is their choice. But even if
they didn't - wouldn't give me any reason to doubt them being licensed.
"Posting" a call sign doesn't prove a thing. "I" for one - am NOT going to
go running to the FCC database to check your call or any other to see if it
is legit. I don't care........

8873, 74 and 75 are not only pin compatible but electrically as well.
Of course only the 74's can be found and they are "expensive. They are
axially cooled just like the 4CX-250s so it'd take modifying the
system to pressurize the tube socket area to get suficient cooling.
The 8874's do have 400 watt plate disapation if you put enough air on
them.

Yeah, and I've had these two left handed pipe wrenches around for
years. This southpaw found them indispensable on galvanized, but can't
seem to get them to work on copper pipe.

When I reached my first duty assignment in the USAF I was sent on a fools errand to get 1000 yards of flight line. When I got to the place I was suppose to pick it up I told the guys there that I knew what flightline was but I had an idea for a joke on the guy that sent me down there.They were very happy to help. We went out back of the base and loaded up a truck with rubble from flightline construction then took it back and put it the POV pickup of they guy who had sent me out. When I went back to the shop I told him I had the flightline but didnt think I had the thousand yards he had requested. This got him and everyone else in the shop curious and they all wanted to see what I had brought back. Thats when I told him to go look in the back of his pickup.

I don't know where you are getting your reviews, but on e-ham, the TS 2000 is the second most reviewed HF transceiver with 279 reviews and an average rating of 4.6 out of 5.0. (the Icom 706, all flavors, has the most at 334 reviews.) The TS 850 has 79 reviews with an average of 4.7 out of 5.0. Not much difference and a much smaller population in the data set. I'd say the 2000 is holding it's own as far as user reviews go.

Oh yeah...Justin Case of WHAT??

2648. FS: Kenwood TM-741 Triband Mobile

Newsgroup: rec.radio.amateur.equipment
Date: 2006-06-10 02:03:18 UTC
From: RadAct <n7rcm@pobox.com>
Message-ID: <GLpig.3976$lf4.655@newsread1.news.pas.earthlink.net>
Source record: 9134

Most of you know what this radio is and does. The radio has three modules installed,
2m, 220 & 440.

PAY ATTENTION HERE: The radio works perfect in every respect except that about a month ago the back light started going on and off on its own. It would stay
on for a day and then turn off. Then eventually it stayed off.

I reset the unit to factory specs just in case I may have messed up a setting or something
but that didn't do it. The readout is there and you can see it fine when it's daylight or if
you shine a flashlight at it at night.

I already upgraded so I'm selling this to offset the cost of the new one.

Unit cames with DTMF mic and power cord. NO mounting bracket.
I don't have the manual either but you can get it on ebay or on the web somewhere.

Price: $230 obo. Don't be afraid to counter offer but, don't get crazy.

Remember, this has three bands in it. Not like the other tribands
that are being sold for more and only have two modules installed.

2649. Re: Kenwood TM-741 Triband Mobile - SOLD

What are SWR's? Does your antenna have multiple standing wave ratios?
Were they sick? Did they have MPD? Do you SWR's look in the mirror each
morning and say "well, who are we going to be today?"

Does the standing wave ratio own something called "are better"?

Are SWR's related to 73's, and if so does the hat help 73's also? Is
your antenna still a fertile female that gets wet whenever a large
capacitance hat climbs on top?

A local school had "Spelling Award's Day" on a sign out front. When I
saw a pamphlet, it said "Selling Awards' Day".

Maybe it was award's for selling extra 's as a school project
"SWR's" and "73's" , or should I s'ay award's for s'ellin extras'
s'sses ?

73's and Happy SWR's to all,
Tom's

2653. YAESU FT-7800R alignment mode

Newsgroup: rec.radio.amateur.equipment
Date: 2006-06-10 11:43:09 UTC
From: Stuart <n5lbz@arrl.net>
Message-ID: <128lc1qssgflu2f@corp.supernews.com>
Source record: 9139

Does anyone know how to get this radio into the alognment mode?

I have a copy of the technicial supplement and I have the knowlege
and access to the test equipment necessary to realign the radio,
However, I have not been sucessful in geting the radio to go into the
alignment mode.

I tried to place the radio into alignment mode as described in the
technicial supplement but it will not work. When I hold in the MHZ[PRI]
and Hyper Memory [5] keys and turn the power on the radio displays
F-1 in the upper left corner and SETRST in the display. [According to
the operators manual this is supposed to happen if you hold in the
MHZ[PRI] key while turning on the power] The next step in the manual
is to press each function key in order, left to right, starting with
MHZ[PRI] and ending with S.SCH[ARTS} then press and hold the [88]
key until "A-0 REF.xxH" appears in the display.
Pressing these buttons as indicated and holding the [88] key in causes
the radio to beep once after about 1/2 second.
But the display does not change from F-1 SETRST

I sure would like to hear from someone who has been able to get thier radio
to go into the alignment mode.

Thanks
Stuart

You failed to mention the Kenwood TS-950SDX.
I have two of these and they out perform my TS-2000
and Icom Pro III, although it is hard to beat the Icom monitor.

Methinks your leg was being pulled.

The SWR with the apostrophe s is a grammatical error. The apostrophe s indicates that the SWR is possessive, that the SWR owns something; or, that the SWR is doing something. The apostrophe s is not plural!!

The plural, multiple, SWR is denoted SWRs.

Kenwood TS-430s HF Tranceiver in good conditon. Bought it used a couple of years ago and use it on SSB and CW. Good output and great audio qualities. The radio was repainted by a previous owner but looks nice and meets all my needs but as many of us I have extra radios that need to find new homes. There is a slight dent on the top panel and some pitting on the rear panel. Radio includes the optional two filters: YK88CN (narrow cw filter) and the YK-88A (AM filter) Also included is the mobile microphone, and a copy of the manual.

Take a look at the detailed photos I've posted to:
http://s46.photobucket.com/albums/f123/journeymaker/Kenwood%20TS-430s/

On the contrary, the plural of the letter A is A's. The plural
of the number 3 is 3's. It's not too much of a stretch to assume
that the plural of SWR is SWR's.

From Webster's: "apostrophe - a make used to indicate ... the
plural of letters or figures."

2665. Re: fs: Kenwood kpt50 repeater radio programmer

Newsgroup: rec.radio.amateur.equipment
Date: 2006-06-11 01:23:55 UTC
From: gl4871 <gl4871.297x22@news.radiobanter.com>
Message-ID: <gl4871.297x22@news.radiobanter.com>
Source record: 9051

[I would be willing to pay $140.00dollars for your kenwood kpt-50
programer thank you Jerome
=Skipp has Kenwood stuff] Kenwood kpt-50 repeater and radio proThis
unit programs the Kenwood TK and TKR-720 / TKR-820 series repeater,
base and mobile radios. It will also do (some of the) other similar
Kenwood models.

This unit is probably my last one for sale. I sold them on Ebay
earlier
this year for various amounts up to $239 each. This is an original
kenwood unit and yes I'm an Authorized Kenwood Two-Way Radio Dealer -
Service Center and would be happy to supply any two-way radio - parts
needs you might have. Drop me a note if you have any Kenwood Two-Way
question.

This is a previously used unit, started life as my personal kpt50, lent
it
to "a friend" who had it over a year to program one "quick repeater
job".
Got it back just a short time ago. I will put a full new equipment
warranty on it and provide copies of all the proper programming
information. I had to use my last inventory unit in place of this unit
while it went on vacation with my friend. Now it's back and I have one
unit extra.

I used to program the tkr-820 (and 720) repeaters by hand using this
type
unit, but forget that... this unit has the normal rs-232 pc port
access
which allows you to do everything on your related laptop and save the
data
in regular archive files. Much nicer... I'll include a regular copy
of
the pc software with the unit, not bad.

Now the price, set below actual Dealer cost at $165 plus actual
shipping,
figure maybe $5 for USPS Priority Mail.

OK, that's about it. Drop me an Email if your are interested. If no
one
responds within a week or two, I'll toss it up on Ebay. Don't be
confused
by the "clone units" often listed on Ebay. Some of the associated
programming units don't work on all the models. I know because I
bought

one myself before I became a Kenwood Dealer some years ago.

This is an original Kenwood made KPT-50 programmer.

That's about it, remove the NOSPAMPLEASE from my email address if you
want
to drop me a related message. My ebay ID is over 700 actual... all
positive feedback so I hopefully must be doing something right.

Thank you for reading this post.i WOULD BE WILLING TO PAY $140.00

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.ourmedia.org/node/235576

Topics discussed in SolderSmoke #25:

-- Bill puts Astatic D-104 on ECHOLINK
-- Mike's 80 mtr DSB rig becomes transceiver!
-- Mike's two chip EMRFD NE602-LM386 receiver
-- The rewards of homebrewing

NEXT EDITION: RECORDINGS OF MIKE and BILL's DSB
RECEIVERS!

Listen at: http://www.ourmedia.org/node/235576

Background:
Tired of listening to Led Zepplin or NPR on your
I-Pod? Wouldn't you like to be able to carry with
you the kinds of ham radio conversations that you
listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in
London, England meet regularly on the ECHOLINK system
to discuss their homebrew radio projects. We are
making them available as PODCASTS.

NEW RSS FEED: You can subscribe to the program, have
them downloaded to your MP-3 player, and listen to
them at your convenience. To subscribe, just cut and
paste this URL into your I-poder (or similar)
software. We've been having trouble with our Ourmedia
RSS feed, so Mike (software wizard that he is) has
homebrewed his own RSS feed. In order to subscribe to
SolderSmoke, point your podcast software to:

http://kl7r.ham-radio.ch/soldersmoke.rss

If you don't have an MP3 player you can just go to the
site below and listen to the latest program (and
earlier editions) using the audio software on your
computer.

http://www.ourmedia.org/node/235576

Here's the homepage for our show. All our programs are available here. There is also a blog and links to some of the sites and documents we've been discussing: http://www.ourmedia.org/user/36170

We hope you enjoy the program. Please send us feedback.

73 from London

Well, Webster shows more than one error, at least insofar as formal English
goes. What Webster depicts is the "dumbing down" of what our kids are being
taught today.
Do what you wish, but those who are better educated will continue to use the
apostrophe to denote the possessive rather than the plural.

That definition agrees with what I learned in English
class 50+ years ago. The plural of a number uses an
apostrophe. So 73's would indeed be the plural of 73
as in "many best regards". It's no stretch to assume
that the plural of SWR would be SWR's.

Incidentally, I have an obvious typo in the definition
that the spell-checker didn't catch. Should have been:

"apostrophe - a mark used to indicate ... the plural of
letters or figures."

I have a "Webster's New Universal Unabridged Dictionary"
which contains a "Basic Manual of Style" in the back.
Here's what it says for "Apostrophe: ... 3. To form the
plurals of letters or figures add an apostrophe and an s."
That's seems to be prescriptive.

Would a "Basic Manual of Style" change your mind?

I have a "Webster's New Universal Unabridged Dictionary"
which contains a "Basic Manual of Style" in the back.
Here's what it says for "Apostrophe: 1. ... 2. ... 3. To
form the plurals of letters or figures add an apostrophe
and an s. ..."

It does say that a few people object to number 3. As in
many other areas of the English language, the context of
the use of the apostrophe determines its function:

1. to replace missing letters,
2. possessive,
3. plurals of letters or numbers.

P.S. The better educated posters avoid violating the
attribution rules for newsgroups.

good one
If I can ever help in increasing the absurdity of these newsgroups, I am
glad to do so.

BTW, all dictionaries are descriptive.

Ehams reviews are very subjective and the rating of the radios should not really be compared on their score scale. By that measure the Icom 736 is a better rig than the Icom 7800 or Ten Tec Orion. It is best looked at as a measure of user satisfaction with that particular rig to the users expectations for the money. I have a Kenwood TS 850 and a TS 2000 and the TS 850 absolutely blows away the TS 2000 in receiver performance. The link below shows Sherwood Engineering rankings on many rigs based on close in dynamic range performance. Note how high the TS 850 is in the list with affordable Inrad filters installed [not roofing filter]. Almost all the radios above it are ham band only rigs and the IC 765 has the narrow roofing filter in it I believe. Interesting is how great a performer the TS 830 is shown to be. --- Steve

That list is only a ranking of narrow spaced dynamic range and doesn't take into account the many other things that make a radio great. That's wonderful engineering data, but is very limited. That's why user reviews such as one finds on e-ham and other places are valuable. Obviously they're subjective. But they take into account real-world, everyday user impressions of a rig which includes a wide variety operating styles and tastes. How, for example, can I cross band repeat, or run six meter e-skip openings on a TS 850? I do that all the time on my current rig. And still get outstanding performance when running HF (without the need for optional "affordable" extra filters) See my point? If we only went by spec rankings, we'd all be running Orions, I guess.

Use of the apostrophe as a plural designation is rapidly becoming
passe'. IIRC it already is in the UK.

Possessive is the new standard.

I get my chops busted if I write with say last year's work instead of
last years work.

I don't understand. Possessive is the new standard? Your chops get
busted whey you write "last year's work"?
That IS possessive.

Is it? I've always wondered. Does the work "belong" to last year?
Does last year "own" the work? It's *my* work that was done last year.

Curious,

This is based on the mistaken assumption that ComCrap even cares.

Their "abuse" department seems to exist solely to make sure that
ComCrap's clueless (L)users, their machines crammed full of spammer
trojans and spyware and thus turned into spam-spewing zombies, can abuse
the rest of the 'net to their heart's content.

You don't have to take my word for it. Just ask around in
news.admin.net-abuse.email. Alternatively, have a look at spamhaus.org,
and see how many active listings ComCrapTastic has.

Keep the peace(es).

1. Too bad you have to work for/with people like that. " ... last year's work" is correct. The possessive does not exclusively denote ownership. It also denotes the "of or pertaining to" relationship, as in "Cleveland's bus system."

2. I just went to the McGraw-Hill Learning Center

http://highered.mcgraw-hill.com/sites/076743000x/student_view0/chapter1/apostrophes.html

and took their apostrophe quiz

Results Reporter
Out of 17 questions, you answered 17 correctly, for a final grade of 100%.

17 correct (100%)
0 incorrect (0%)
0 unanswered (0%)

Here's the most interesting one:

Last years womens softball team is much better than this years. [The stem omits apostrophes.]

C) Last year's women's softball team is much better than this year's.
Feedback: Correct!

3. Despite the absolute correctness of the apostrophe for the plural of numbers and letters, I see a lot of acronyms and abbreviations made plural by the addition of an "s" without the apostrophe and I don't flinch. I think the language is evolving regarding acronyms, which, after all, are less than 100 years old. Therefore, I vote to accept "SWRs."

73,
"Sal"

My new-to-me Kenwood TH-22AT came with a few dead batteries that I'd like to carefully disassemble and solder new cells into.

Anybody know how, exactly, to get the case apart without wrecking it?

Thanks

Kevin at myfamilydotcom@hotmail.com

I have a life, thank you. As far as "Google", I guess that you're
too retarded to notice that I'm on Usenet and "Google" is hijacking my
posts to show on their crappy HTML interface.

YOU need to get a life and stop whining about every rule you don't
like. USENET has always been self policing. Newsgroups that don't, end
up as useless dumping grounds for spam that no one reads.

For instance, its considered to be very low life to keep changing
your screen ID, and against the TOS of most ISPs. I'm tired of creating
new filters for your moth eaten ass, boy.

Check out the Diamond SRH320A. I have one and really like it. Does transmit on all 3 VX-6 bands plus offers very good receive on six other bands such as public service, aircraft band, etc. Transmit antenna is 1/4 WL on 2 and 220, 1/2 WL on 430. 35 cm tall, very light, flexible, well finished. Somewhat pricier than others, but looks like it will last forever. SMA connector. Craig AC0DS

Everybody is correct and everybody is wrong.

According to Turabian's "A Manual for Writers", plurals of most single
and multiple capital letters used as nouns are formed by adding "s"
alone. Example: SWRs
Form the plural of small letters, capital letters with periods, and
capital letters that would be confusing if "s" alone were added by
adding apostrophe and "s".

Now, everybody, back to work and mind your p's and Qs

Here are several instances of the TS-2000 being compared to the
Kenwood 850 and other rigs.

==========
1

http://www.eham.net/forums/StationBuilding/2065

2

From http://www.eham.net/reviews/detail/1249?page=2

W5AK Rating: 4/5 Oct 23, 2005 21:15

Very Average Radio Time owned: 3 to 6 months

I have compared the TS-2000 against the TS-850 so many times that I
can not count. On CW, the radios are not even close in weak signal
reception. The TS-850 is clearly better. I use the TS-2000 on 6 meters
and it's OK. Deaf on 2 Meters without an external preamp. When I read
these reviews, it makes me wonder whether you have the same radio. I
use a high end transverter and TS 950SDX on 2 Meters and the TS-2000
is so far below this rig that I took the it off line. I was really
dissapointed! I'll keep it here in case the next satellite actually
works. Otherwise, it's going to stay on the shelf where it belongs.
This is a really average radio that is below 4 but I feel kind
tonight.

3

http://www.eham.net/reviews/detail/1249?page=2

N7BUI Rating: 3/5 Oct 23, 2005 16:06

OK rig, but probably won't keep it. Time owned: 3 to 6 months

As much as I'd like to continue the drum beat of how wonderful this
rig is I just can't. I have enjoyed its HF ham band SSB/CW operation
but on AM reception this thing is the pits. Some will probably think
that this is a minor point. But if you use your radio mostly for
general SW reception like I do you would understand. While tuning the
SW AM bands this rig has an annoying "pop pop" noise as you turn the
knob through stations (AGC?). Opening the DSP wider helps, but then
you have to put up with hetrodynes every 10Khz. There doesn't seem to
be a happy medium of DSP/AGC/RF gain. Tighten the DSP and the "pop
pop" is worse and fidelity is garbage. My Yaesu FT-857D is a much

better receiver for SW. That combined with the very strong birdie on
UHF, this thing might be going out the door. I don't think I should
have sold my FT-847! On its plus side, the dual receiver feature is
great, the SSB operation is excellent, and on UHF/VHF FM it works
great. I have used the ï¿½Sky Commandï¿½ with my Th-D7 and it is a neat
feature. But donï¿½t let all the bells and whistles blind you to some of
the issues this radio has.

Yes I heard the 2000 is quite deaf and the voice compression sucks
among
other things. Perhaps Kenwood should have concentrated on the
functionality
of the radio rather than the whistles and bells

There are other comparisons if you search the net.

-Justin

2709. unclipping Furuno FS1503 for lower sideband

Newsgroup: rec.radio.amateur.equipment
Date: 2006-06-12 15:10:06 UTC
From: Patrick <Patrick@SPAM.com>
Message-ID: <128r0unhde6t126@corp.supernews.com>
Source record: 9095

I am trying to help someone out who is currently cruising and can not contact Furuno. THey are trying to use their FS1503 on lower sideband but there is some 'unclipping' procedure required to enable lower sideband. Does anyone have the details on this procedure? They seem to think its a keying sequence on the controls. I'm pretty sure there is a jumper which needs to be clipped.

Any help would be great.

Thanks!
-patrick

I posted the previous message. Here it is...

==========

From http://www.eham.net/reviews/detail/4?page=5

AA8VL Rating: 5/5 Dec 5, 2002 11:07

SIMPLY THE BEST DARN RIG--THE AUDIO REVOLUTION Time owned:
more than 12 months

First off, I have used many of the high end radios out there. I
thought the best rig for me was the Kenwood TS-2000...so I bought it!

Bought a TS-850S/DSP-100 for backup and WOW! Sold the TS-2000 and
bought another TS-850/DSP-100.

The audio on transmit and recieve is AWESOME! Just stock out of the
box without the optional DSP-100. With the DSP-100 the Kenwood TS-850
is simply an unmatched rig for the competition. I have never yet seen
a rig in the price range of this one that is able to produce such
sweet TX / RX audio!

If you buy a TS-850S be on the lookout for a DSP-100. You will not
regret it.

I will never sell my TWIN 850's! PERIOD! It's love baby!

Chris, AA8VL

> a jumper which needs to be clipped.
>
> Any help would be great.

Patrick,

According to the Furnio FS1503 manual, found at:

http://www.furuno.com/Furuno/Doc/0/LUF7IRLV4T841D2D338M1UFA54/FS1503
+Operators+Manual+Version+C.pdf

The Mode key selects the class of emission. Each press of the
[Mode/1] Key steps the emissions selector through a selection of several
modes, LSB*, J3E (USB), AM, TLX, and FAX.

However, please note that the first selection of LSB is marked with an
asterisk and is indicated as "available with system setting by FURINO
authorized service agent." This would indicate to me that the LSB
setting is therefore only available as a choice after the radio has been
modified by Furnio service tech.

Ed K7AAT

My appologies, it appears that my previous reply was not what you were looking for, but in fact you wanted the technical procedure that Furnino service techs use to enable the LSB selection.

I don't have that information, but perhaps if you can contact Furnino yourself, by telephone or email, you can get it.

Assumuing you are in the United States, Furnino is availabe at:

360-834-9300 and email: info@furuno.com

Ed

As in words like, "amen", are pronounced "ah".

That certainly seems confusing to me and the confusion
is not apparent until more than halfway through the
sentence.

A's in words like, "amen", are pronounced "ah".

No confusion there.

Dear sir:

The FCC has been dumbing down ham radio for several years now. This has hurt the integrity of the service and is bad for America. They are planning to dumb it down again really soon now and their plan will make ham radio like CB and it will be bad for America. We already have one CB service, we don't need two. Please pressure the FCC to endorse the following items for the good of the service and County.
God bless America.

Signed
(Your name & callsign)

No more automatic renewals. Individuals must retest and pass all elements required for their license class.

The passing score for written exams needs to be raised to 85%.

Code elements should be 13 wpm for General, and 20 wpm for Extra.

Make the no-code license one year non-renewable.

when I took my test, some math was still required (along with knowing where
you were legally allowed, etc.).

I have had chance to read the latest offerings in the test pool.

I'd like to see them bring back the math problems (antenna theory, ohms law
and the like).

Interesting to note that "Slow Code" and "Radio Buff", in addition to having apparently-identical agendas about rolling back FCC standards into the 1950s or before, both access the Internet via Level3 dialups in Denver.

Also interesting to note that the poster going by the handle of "New ham", who asked a rather inane question about a capacitance hat for his antennas (but who has no other posting history at Google), accesses the Internet via a Level3 dialup in Denver.

Possibly it's something in the water up there. Perhaps those three gentlemen ought to form a new ham club in Denver? That's enough members to qualify for a club-station license.

Then you fail to recruit new blood into the hobbie. Certainly they should have restrictions, but you need to have a no-code ticket available, otherwise why leave 11 meters. I do not want to learn the code, I have no interest in learning the code, I never plan to use code, but someday I may change my mind, and when that day comes I can test and move up in class. But if you stop people at the front gate, don't expect them to return.

We recruited more new blood into the "hobbie" when the Novice required
code (if you can't learn 5wpm, there's no way you could learn enough
theory to pass the old exams - and there's more theory to know these
days) AND one year non-renewable than we do now. There are reasons
there's less new blood, but code isn't one of them.

>Certainly they should have restrictions, but you need to have a no-code ticket available,

Good question. Ask those who did back in the early 60s - when code
was required. Maybe just listening to 11 meters, then listening to 20
meters, is reason enough.

> I do not want to learn the code, I have no
>interest in learning the code, I never plan to use code, but someday I may

Since tens of thousands of hams "returned" when code was required,
your basic premise is wrong. *You* wouldn't return if code were
required, but you aren't everyman. (Try the old General as the "entry
level" exam, 13 wpm and pretty stiff theory, with the only upgrade
being the Class A ticket. And yet, many many hams went that route.)

Reagan may have wanted a WW3, but he didn't use drugs. The documentary I saw
about JFK said he had a Dr. shooting him up with meth up to 5 times a day.
I'm not the conspiracy theory type of person, but I can see why a government
organization would want him dead.

>Reagan may have wanted a WW3, but he didn't use drugs.

Reagan didn't need anything external to alter his mind - he had
Alzheimer's. And Nancy, who had a large hand in running the White
House, did so with a fortune teller's advice.

> The documentary I saw
>about JFK said he had a Dr. shooting him up with meth up to 5 times a day.

He had a doctor giving him pain killers - because he wrecked his back.

>I'm not the conspiracy theory type of person, but I can see why a government

The fact that he "ruined" government (government as it was, at any
rate), might have something to do with that.

Actually, if you knew anything about "radio" in general, you would realize
that we DO have more than one CB service; matter of fact, there are 5 CB
Services.

One (GMRS) requires a license, one that in non-voice (R/C,) and 3 that are
open to whomever wants to use them, license-free (CB, FRS, and MURS.)

Get at least a SMALL clue...

> Any help would be great.

Patrick, I hope you are still reading this thread as I can't seem to
find a valid email address for you.

Here is the procedure to unlock the LSB function in the Furuno FS1503:

You need to change system parameter 9914 to "0" to enable LSB capability.

SYSTEM PROGRAMMING PROCEDURE:

1) While pressing and holding down the [CH] key, turn the power on to
enter system programming mode, release the [CH] key after unit is on and
"MEMO" shows in the display.

2) Select function 9999 by rotating the FREQ/CH knob.

3) Press [CH], [1], [5], [0], [3], and [ENT] keys. ("1503" is password.)

4) Select function 9914 by rotating the FREQ/CH knob, then press [CH],
[0], and [ENT] keys.

5) To finish up, escape the programming mode by simply turning off the
radio.

The system programming is completed.

Oh jeebsus-h-christmas on a rocket-propelled sled in the Nevada desert!
You are one dumbass dipshit. A perfect ambassador for ham radio.

You were'nt the FATASS I saw on that scooter at Dayton
pulling that wagon of junk around were you???

I mean.....Jeeze!

I never saw so many FAT ASS HAMS ON SCOOTERS at Dayton this year.
Bet the electric bill to re-charge all those Electric Mobility scooters was
TWICE
the cost what it needed to run the Icom and Yaesu display!

Here's your future of ham radio folks!
OLD FARTS who EAT and SMOKE themselves to death
faster than the barstool warmers at the local VFW and AL Post!

> God bless America.

If they did what you want, ham radio would be dead in just a few years.

The primary problem causers in the past and present aren't new hams,
they are the old timers who passed all the elements a long time ago.
Maybe it's the cause of their behavior?

The code needed to go 40 years ago, it's about time it was removed as a
requirement.

I am in need of a DM-28-R dynamotor for a BC-348-R receiver.
Must be in working condition. Not too concerned about looks
(can't see it anyway, once it's installed in the receiver!).
Once I finish restoring this receiver, it will be installed
aboard a B-17.

Thanks and 73,
Dean K5DH

You're welcome, Patrick. I emailed about 4 yacht maintenance vendors here on the West Coast and got back two positive replies. To give credit where credit is due, the first response came from Marty, WA7JMA.

I sent this info to mods.dk also. Hopefully they'll post it to their mods website.

I am trying to build a set of lp filters for the ham bands for use with the 600w motorola designed fet amplifier described in last months qsl .I have successfully modelled suitable filters using pspice using 3 series inductors with 2 parallel caps for each band but I notice the current in the caps can be several amps peak. values range from 150 to 3000pf. Can ceramics be used? Or do I need several parallel silver mica caps? How much power can one dissipate in these caps? Near the corner frequency there is as much as 6db gain under low load conditions and this exacerbates the problem. I could move the corner further up so that the filter is not excited at the peak current, but then I will probably have to increase the number of poles to 7 from 5 to get enough attenuation at the third harmonic. Is there a better filter architecture that minimizes cap current?

As much as I hate plurals formed with apostrophes, you're wrong.

From what I remember, that's not universally incorrect.

Oh, and I'm taking your apostrophe quiz, and it appears there's an error
in the "correct" choice: (B) uses "its" as the contraction for "it is".
So the answer to 17 should be "None of the above". (I scored 100% also.)

Incidental note: I've never understood how people who use "it's" as a
possessive never even think to use "hi's" (though some use "her's" and
"their's").

A well educated friend told me that the Aramaic word
for "God" is "Allah". It would be nice to know if
he was wrong about that.

Aren't Yahweh, Jehovah, and Allah all the same God-head?

Seems to me that ole' Murray has forgotten the meaning of the phrase
Caveat Emptor. Believe it not, but for the most part, anything you
buy at a hamfest (other than from a reputable commercial vendor) is
"as is." In this case, I'd refer you to the phrase "boat anchor" for
further action...

Man, I wish I still had one. A BC 348...big and black...was given to me
by my Elmer 35 years ago in my novice years. He built a basic power
supply: rectifiers but no transformer...I got a nasty shock if I didn't
plug it in right (in the old days before polarized plugs) It did manage
to keep me awake during those wee hour ops. It was a neat receiver!

Great! Glad the part at sea was pleased. I would have contacted you on the Blog forum site, but it appeared I had to sign up a new account in order to email you. Glad you were keeping up with your posting here.

I also successfully added that mod to http://www.mods.dk for other mariners out there who might want to use their Furuno on the ham bands.

Ed K7AAT

Yup, me too. I listen to "A Way With Words," a radio program on KPBS
(available streaming at kpbs.org) whose host is language writer Richard
Lederer ("Anguished English," "Get Thee To A Punnery," etc). Richard said
that "it's" for "its" (possessive) was considered correct until near the end
of the 19th century. I didn't know that.

2806. Re: fs: Kenwood kpt50 repeater radio programmer

Newsgroup: rec.radio.amateur.equipment
Date: 2006-06-16 15:22:27 UTC
From: Skipp is back <skippsayshello@yahoo.com>
Message-ID: <e6uibjkur1@skeeter.ucdavis.edu>
Source record: 8992
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.antenna

Man, the below is an old post... anyway the used kpt-50 programmer
is long gone/sold. I bought up a number of the last units Kenwood
had at the time and have been slowly selling them off. The Epcom
price for the kpt-50 is about $330 at last glance, I was selling
them for about $245 list and applying various discounts to get the
end price just about or just under $200... say about $195 per
unit. The mentioned price is for a new (not used) programmer with
the matching (and really handy) kpg software for use with a PC. Using
the matching software with a pc is really the only way to go. You
can save and retrive both base station and repeater station files,
which include the frequencies and ctcss (PL) - dcs (DPL) codes to
your computer hard drive (archived).

Anyway, I'm still around and still a full line Kenwood Dealer. Please
feel free to email me if you have any questions. Find me using the web
page url just below.

cheers,
skipp

GTE was "General Telephone, Inc." a company that ran small local
phone systems and sold early PBX systems. ;-)

Any such animal? I only need 2M, but any extra bands are ok. This is for an old MGB that takes a single DIN size radio, and believe me that's the only place anything will fit. I really want an external audio input for my little portable GPS unit. There are a couple healthy speakers mounted in the doors that MUST be used in order to hear anything with the top down on the highway. (I assume all mobile rigs have an ext speaker jack.)

Send a note to TenTec with a copy of your MARS license and they will send a replacement PROM. I have one in mine and use it on all MARS frequencies. As you appear to be Canadian, not sure if that will help.

There are some tri-band mobile antennas out there. You may try some
variation of what I am using on my car.

I have a 1995 Ford Explorer and my radio is a Standard C5900 (6m,2m,70cm
bands). I use a diplexer that cuts off at around 100mhz. I take the
low (50mhz) feedline and run it to a quarter wave whip on my fender. I
removed the factory AM/FM antenna and replaced it with the 6mtr whip. I
then take the "high side" of the diplexer and run it to a Larsen
2m/70cm roof mount antenna on an NMO mount.

The 2m/70cm antenna I usually use is a low profile cellular look-a-like,
about 18" high and mounts on a standard NMO. I can easily replace this
antenna with one of the taller Larsen dual band antennas if I figure I
may need it.

Also, I have a splitter manufactured by Antenna Specialist that allows
me to use my AM/FM radio off the 50mhz antenna without damage to the
reciever.

Hello,
I recently purchased my first HF amp at a local hamfest and am planning on babying the tube (it uses the expensive and rare 8873). I would like to pulse my keying. I see that Ameritron sells one, but could the same result be had by sending a string of dits with my electronic keyer at around 50 or 60 wpm? Any other tips on how to baby this tube? The amp is a Heathkit SB-230. Would it be a good idea to set a muffin fan on top of this amp to suck air out of the cabinet to improve the cooling of the tube?

Not quite. Testing on rules, regulations and technical knowledge is a bit different than testing on one specific mode of communication. I use CW, but considered the continued archaic CW testing requirement to be silly and outdated. It should have been dropped 30 years ago.

We give driving tests on the ability to drive the car and follow the regulations. We don't test on the proper operation of a buggy whip or care and feeding of horses. While people still enjoy riding horses and driving around in buggies, they do this of their own free will and no one is forcing it on them through a testing process to get a driver's license. The horse as a general means of transportation is over. We have evolved beyond that, but people still ride horses for fun and enjoyment and the government does have to force it on individuals just in case we ever have to go back to using horses for transportation in an extreme emergency.

Anybody who can't pass the minimal 5 WPM doesn't deserve a license.

why?

and it isn't a matter f "deserving" alicense at all is about meeting
the legal mandaable requirement and now absent the treaty the code
fails to make the standards of law and the FCC knows even if you don't

5 WPM is easy. esp if you use Farnsworth.

i'm at 18 WPM, and i can copy contest exchanges at 30 WPM. i haven't made a
CW QSO in 10 years!

i think the code requirement should be 13 WPM plus for the upper classes.
keeps the riff raff out.

easy for you

not for me

I spent 5 years in my teens taking a test every couple of weeks towrds
the end. I did get so I might pass either the sending or receiving on a
given day but never both

guess from that data I suspect isf I had the time and schedule I could
mange to pass a receiving or better still a sending test in roughly a
year bt I don't my schedule leaves very busy eroids and very slow
eriods

but all this is beside the point
nothing in the treaty give the USA the requirement to make such a test
and nothing in the consitiotn reglates the matter so the power to use
hf specturm is resvresed byt eh 10th amend to the states or the people
themselves (para the constititon

unless the power to impose a code test can be shown to exist in other
section such preahps shwoing that it is "nessacary and proper" an
arguement that could have been made say when the miltary needed to warn
us of freqs they were suing in cw or some other argument, the FCC and
th congress lack the legeal power to maintain the test if challanged,
an expensive and unpleasent task

> i think the code requirement should be 13 WPM plus for the upper classes.

2830. For Sale: Sony ICF-PRO80

Newsgroup: rec.radio.amateur.equipment
Date: 2006-06-19 17:46:13 UTC
From: sp600historian@cableone.net
Message-ID: <1150739173.375019.287130@h76g2000cwa.googlegroups.com>
Source record: 8866

Completely rebuilt with new capacitors and all of the Kiwa
modifications and upgrades. All documentation is provided.

Look here: http://www.kiwa.com/PRO80.html

It has ALL the accessories that came with it when new, except the Sony
wall wart. It has a Radio Shack replacement, original box, manual
carrying case, carrying strap, FRQ-80 frequency converter, spare
battery pack, tnc to bnc adapter and earphone.

Alignment is on the money and coverage with those not familar with it
is 150 khz to 30 mhz. With the FRQ-80 adapter attached, it covers
115.150 mhz to 223.00 mhz.

Works perfectly, looks excellent, well taken care of and not abused.

$250 shipped/insured Continental U. S.

2831. For Sale: R-1051B/URR

Newsgroup: rec.radio.amateur.equipment
Date: 2006-06-19 17:57:49 UTC
From: sp600historian@cableone.net
Message-ID: <1150739869.256220.76140@f6g2000cwb.googlegroups.com>
Source record: 8867

Completely rebuilt by the R-1051 shop less than one year ago. Complete with a set of U.S. Navy speakers with volume controls and audio cables with proper audio connectors. Mil-Spec power connector and cord. N coax adapter. This receiver was a complete rebuil;d, including the high failure frequency standard temperature components with new parts. Works perfectly, front panel is a 9+, top of case has the normal scratches, rear panel is dent free, (a rarity).

$300, pick-up only in Gulfport, Ms.

Jan,
Email me and I can provide some help. One good document is the CI-V
manual from Icom. It has some sample Basic code which I used to improve
mine. I can also send you my Visual Basic (for Applications) code. You
should be able to figure out what you need. If you have Excel 97 or later,
you can use my spreadsheet directly. I posted it on several of the Icom 706
groups. Look for my call (if you join, you can download my file).

5 WPM is do-able! My 4 1/2 year granddaughter copies 5 wpm! Her 10 year old brother, who learned it in Cub Scouts, taught her. And, she can't even spell yet! But, she knows the alphabet from watching TV.

Some people have DIFFICULTY learning Morse Code, real difficulty!

I have taught Morse Code off and on for 40 years and from total ignorance to 100% success in 8 hours, 2 hours a week for 4 weeks [plus a little home practice. It is practice [work] that makes it successful.]

Some people can learn the code but suffer from "TEST STRESS". They can copy it comfortably in their home or their surroundings; but, when they have to demonstrate that skill in front of a 'WITNESS' who has pass/fail power, they tense up and fail. That's understandable and can be worked with.

Some people are dyslexic. But, they can hear it and talk it out, but can't get it on paper. But, they learned the code.

If you can learn the english alphabet, if you can learn the english language, if you can read this email then you CAN LEARN Morse Code at 5 WPM. You may never progress to 20 wpm [It took me 24 months at 1 hour of practice a day every day to progress from 5 to 20 wpm] but 5 wpm can be learned.

Teaching methods, practice criteria and testing/verification methods become critical for those with difficulty.

/s/ DD, W1MCE

I'll top post again for brevity and getting to the point.

I like CW! It is most likely going away as a requirement. I'm sad at this.

Amateur radio will change as a result. Everything changes. Hopefully the changes will be positive.

No, it's a statement of historic fact, as determined by the licensing
authorities. But it's incorrct -- anyone who can't copy 5 wpm deserves a
license, but it's Citizen's Band.

A further valid statement would be that anyone with an IQ approaching 100 can
learn to copy 5 wpm. That's less than one character every two seconds, which
gives tons of time to recognize and write the single character before the next
one begins. Dyslexia cannot apply, unless it is dyslexia that affects the
remembered dot/dash pattern of a single character.

jesus, let's just do away with the written test *and* the CW test. let's just open the doors to anyone. we'll set up a webpage at the ARRL site, and you'll just point and click. it will be as easy as becoming a Reverend.

you could license your dog, a terrorist, anyone.

honestly, i am very glad there are minimum requirements. this keeps out people who are not serious about the hobby. people who don't know what they are doing should not be transmitting (esp on HF).

this whole CW debate is what we call the dumbing down of America.

i mean we have minimum standards for driving in America or becoming a citizen, why is ham radio so different?

i have an idea. get rid of the CW and triple the difficulty of the written
test. there is certain element of society, which needs to be kept out of
the HF spectrum.

When I got my driver's license in 1952, the driving test
was required to be taken on a stick shift vehicle. Do
you think that should still be a requirement?

How about just requiring a scientific/technical
degree from an accredited university?

NO! Don't label another person! It is wrong to label! Particularly when you do not know any of his/her life's circumstances.

I said some people have difficulty learning or learning one particular subject.

It is reported that Albert Einstein had difficulty learning Calculus. The man was a Physics genius but needed help with advanced math.

I hold a degree in engineering and have completed four years of seminary, but I have not been able to learn conversational SPANISH. [About two years after ordination the Cardinal requested that I learn Spanish at the seminary . After two months the instructor approved my withdrawal from the class. I could learn vocabulary, how to read, write and the grammar for spanish, but my ear does not hear spanish. Total immersion in a Spanish speaking community would be the way for me to learn.]

I still say, anyone who can learn an/the alphabet can learn Morse Code. For those with difficulty, the solution to the issue is teaching METHODs not the student's difficulty. Any alphabet is recognizing sound patterns. Words are simply combinations of sound patterns.

For 'an_old_friend' I would begin by teaching an alphabet of SOUND PATTERNS. No requirement for speed. Just focus on sound patterns. Keep it very simple. Each two hour lesson would focus on no more than 7 letters until well heard. Then move to SOUND PATTERNS that are close to or similar to those [s]he has learned and is mastering. [Example: learn the sound patterns for 'A', 'W', and 'J' repeat until they are instantly recognized. Then move on to 'N' 'D', 'B', etc. Don't count 'dots' or 'dashes' but hear sound patterns.]

The next two hour session, one week later, would begin with a review then add 'T, M, O' followed by 'E, I, S, H'. Drill sound patterns. Then end the session by sending simple words using the 1/2 of the alphabet that has been studied. Speed is NOT a requirement! Accuracy is! If Farnsworth timing at 18 wpm is a roadblock, then change practice timing to 13 wpm or 10 wpm or 7 1/2 wpm or 5 wpm or 3 wpm. SPEED is NOT a REQUIREMENT! Accuracy is!

The next two weeks complete the alphabet. Week five would include the numbers and common punctuation. [5 sound character patterns and 6 sound character patterns].

Having said all this, my defense of CW is not any legal requirement. It is simply the best way to work rare DX. Much less power required. Much less bandwidth required. Much more discernible [copyable] in a pile. And, it is fun!

/s/ DD, W1MCE

it was differential geometry that Einstein was unfamiliar with. when formulating relativity, he realized that he needed tools that he was not familiar with. so he went to a mathematician friend and learned which tools he needed.

please understand this in the context of 1912. differential geometry was fairly new back then, i believe it came from Riemann.

it's possible for some branches of math and physics to be relatively arcane. for instance, de Borges attempted proofs use operator theory. most mathematics students cannot read his papers. in fact, most professional mathematicians can't read them either. the only reason that de Borges proof of Bieberbach became accepted is that it was rewritten by other Europeans.

it's not uncommon for a theoretical physicist to have to learn a new branch of math to solve a problem. for instance, string theorists working on the landscape turned to statistics.

fun for you the migraine headaches I get listening to any of it is not
fun none enjoys pain on that level

yes I might be ableto learn well enough now with only a receive or
tranmited test (and if I were going to try it would be to send) so I
don't have to listen to it

you have fun with fine go for it
Bear in mind I think Mose and esp the attiudes around are bad for the
ARS but I support your freedom to disagree and even to just do
something I consider nonproducitve just for sheer joy of it

I expect the same however for myself

relativity utilizes tensor calculus, which is a few semesters beyond the basic integral calculus taught to many college students. even today, relativity is viewed as fairly knotty. general relativity really isn't tackled until graduate school.

it's my understanding that Einstein was very good at math. to be a lowly patent clerk and revolutionize physics requires real skill.

what is advanced math? multivariable calculus and ordinary differential equations are viewed as advanced by the general population, however millions of people have learned the basics of these. in contrast, there are papers in number theory that can only be a read by a dozen people on the planet.

it's partially due to our own limitations as humans.

No it isn't.

Some things in life require you do a little work to enjoy their benefits.
You don't want to learn CW, you shouldn't be allowed on ham radio.

And Five words per minute ain't a code test. I can fart five words per
minute. Anyone that can't learn 5 wpm is either lazy or a tard and should
stick to CB, FRS, and cell phones.

We gave those Techs the no code license because some said they weren't
interested in HF and wanted the freedom experiment with new modes, but
that's not what happened. All we got was a bunch of appliance operators
plugging up repeaters. Maybe only two or three percent are doing digital,
new modes, satellites, scatter, aurora, DX, etc. everyone else is gabbing
on a microphone like CB'ers waiting for the FCC's R & O to come out.

Don't be sad my friend. CW will survive if people find it useful, and
especially if the diehards will stop jamming it down people's throats.

News flash: People don't like that with CW or anything else! :-)

Of course not. Today's driving test should require making a left turn
while dialing a cell phone and sipping a Starbucks.

Bill, W6WRT

Need to replace the momentary pushbutton switches on an MFJ 492 memory keyer. I've looked in the Mouser and Allied catalogues without seeing the replacement. Anyone know of a supplier for this switch?

Well, Larry, it took you to the last sentence, but you did actually lurch
into the problem.
Within seconds after learning what dah-dit-dit-dah means (or
dit-dah-dah-dit, for that matter), I fail to
accurately recognize them when they are sent again. Hundreds of tries --
all failures, all mine.

From your lofty perch, as a successful Morse Code user, you look down on me.
You could stand to learn a
little humility. It would serve you and the amateur community better than
dah-dit-dah any day.

Hello, I have a little used MFJ-492 electronic keyer that I've decided to put to good use as an amplifier tuner. (This is my first amp). The keyer defaults to a 50% duty cycle and I would like to get this down to around 10 or 20 percent. Any suggestions on what weight to use? This keyer is adjustable from 5 to 95 percent weight...I do not have a scope so would have to guess by ear. Thanks for the help.
Craig KB8FGC

should we get rid of the written test because people can't learn decibels
and basic algebra?

perhaps the CW test could have a question pool similar to the written. you
could memorize all the answers. i am actually dead serious. or standardize
the test so that the output is always like a QSO in super morse. there are
ways to make the test easier.

hmm, or we could have an option that you can view the CW in a spectrogram
and decode it visually.

It matters not. When management lacks the same talent, engineers will
be chosen for economic rather than practical reasons. Outsourcing to
India and H1B visas are proof. The fact that India has yet to produce
a single Intel or Microsoft or H-P or Sony is lost on those whose who
fawn over those rote trained hordes.

Bill you are 100% wrong!

I am a right wing Republican, socially conservative, I attempt to be morally correct [that makes me politically incorrect quite often], and Conservative Christian [Clergyman]. I favor a very strong military [prior to my retirement from engineering, I served for 6 years as Program Chief Engineer on the USAF MX Missile (WS-118) RS/RV].

I believe the USA Constitution must be read and understood in the social context in which it was written. Changes should be by amendment not judicial agenda.

/s/ Rev. Dave , AKA W1MCE

See, labels can be 100% incorrect when you don't know the other person's life story.

Hi there.

Just a quick thought. I will not jump into the code vs. no-code fray. That said, I'd like to pass on an experience I had with a college professor friend of mine many years ago, now passed (Doc Bronfield WA2SMW). I learned CW at the age of 9 using flashing light. Now age 57. Got my novice at age 14 and general at age 15. The extra came easy as did 30 wpm plus CW. Not so with my friend Doc. He tried and tried, and then we realized that he had aural dyslexia. So I had an idea. With the help of local engineering types. They built a keyer that could sent different frequencies slightly for the dits and dahs. That was what he needed to get his code speed up and pass the general using the keyer during a FCC test. Here's what I believe should happen with CW. When I passed my extra there were no extra class operating privileges issued, but the FCC issued a nice Extra class certificate for the accomplishment (which I still have). I suggest we leave the 5 wpm code requirement in place as it now is, but go back to issuing the 20 wpm certificate by VE's. That would, perhaps, satisfy, the pro-code folk? It would reward the accomplishment without necessarily making it an Extra class requirement.

You and Sal M onella should hit it off just fine. With his dyslexia, and your
mis-spelled words, he's probably the only one here that can clearly read
and understand what you typed.

MX missiles have never been launched operationally. They were decommissioned by treaty after the fall of the Soviet Union.

If they had been used WE wouldn't be here!

You are mistaken.

In as much as the MX missile carries a hydrogen warhead I don't think
that Soong's country was destroyed by one.

>
> hmm, or we could have an option that you can view the CW in a spectrogram
> and decode it visually.

I have offered such as an possible acomodation since I have in fact
done a few QSO's almost exactly that way (used a computer to decode

what it could and used my eye to fill in the blanks, that has me my 3 CW EME QSO) if alll I needed to do was decode a spectrgraph of Morse and had TIME to work on on without have to hold any of the QSO in my head I (believe) could do that (with some prep work of course)

I might also be just able to use the most extreme accomodation avalible letter by letter (which elimates what beomce quickly a major probem for me was the an I or 2 e's btw)but the VE teams around the last place I ived were unwilling with out and MD signing off and I only ever saw a phd and more likely MSSW about it , that these contacts in the distant past (since I have learned ways of coping on my own) Indeed Robeson made one of his early flaiming attack period on that very subject when in his stlaking of me he learned of my posting to various support forums for Dyslexics and othe rrelated condictions for asking "wht would a MD that does not deal with LDs need in in order to medical cerify the existance of the condiction, and Robeson a once very comon poster hasrenewed that flame attack several times since

I have never inquired of the team roud here since by the time I became settled enough to look into that the NPRM came out and since even those levels would take a extensive prep, it did not seem worth while since it seem clear we will son have at least No Code general if not Extra

Yeah but in newsgroups argumentum ad hominem is practically the order of the
day.
I only offered my education to refute the "lazy or a tard [sic]" cheap shot.

2898. Need Help Testing ICOM IC-F420

Newsgroup: rec.radio.amateur.equipment
Date: 2006-06-22 03:59:23 UTC
From: joshhemming@fastmail.fm
Message-ID: <1150948763.003030.324000@g10g2000cwb.googlegroups.com>
Source record: 8934

I recently bought some ICOM IC-F420S-10 and IC-F420NW-10 UHF radios at a bankruptsy auction. They had been used on the forklifts of a large factory. Each radio has the original ICOM HM-100N mic and a small magnetic base roof mount antenna.

The radios all appear to power up fine. When connected to a 12V supply and the power switch pushed, all the buttons are backlit, the indicator light for whichever frequency is selected lights and every time the freq increase/decrease or volume buttons are pushed the radio beeps. Also, when the mic is keyed the TX/RX button and the frequency 1 through 5 indicator lights illuminate.

The problem is I can't receive anything on any of them. Complete silence.

I'm not a radio operator; I'm just trying to check these out to see if they work before I resell them. The literature I downloaded online said these are PC Programmable and password protected. Is there a way to make these xmit and receive without a password? How do you input the password?

I downloaded an IC-F320/F420 manual from ICOM but the manual shows a slightly different model......one that has alphanumerics and other symbols on the function display instead of just Channel 1-4 lights and TX/RX like mine.

Dr. Nagel,

You please listen to me, I get PhD from big university. My university so expensive most American can't buy cafeteria lunch.

Long time ago, many years, I make secret lair in Bikini Atoll. American call it that, but I rename to Soong's Micronesian Micronation. It has nice ring to it.

Anyway, I build androids and mind my own business, but one day I monitor Americans and they say they blow up my island. Some missile test, but I say waste of perfectly good rocks.

I detect submarine with my acoustics, and I transmit on ELF and say "Don't blow up my island please!" But my Engrish so bad, they get confused and jam me with much megawatts. I not give up though. I build big ideograph out of bamboo, it say "Don't blow up my island thanks". But they have no analyst that read my language. I escape in nick of time in my junk ship.

look at picture, see big hole in middle of island?
http://en.wikipedia.org/wiki/Bikini_Atoll

MX missile destroy me. Now I teach dumb punk how to repair personal computer. I get revenge. I build big contest station and beat everyone.

Soong

NOPE! The MX missile has 100% nothing to do with the Bikini Tests! Those tests were conducted after WWII and ended in the 1950s. The MX missile initial deployment was 1985.

By today's standards, the Bikini tests were low yield [~20KT] fission devices. Today's standard is moderate yields [~300 to 500 KT] fission-fusion devices.

MX has nothing to do with Bikini Atoll.

Have fun building your androids.

No, I see a newsgroup clown that can't accept the fact that this man learned to succeed despite his dyslexia. Instead of offering ideas that could help him learn code you decide to insult him. You sit and whine about how ham radio is going to shit because they allow no code tech licensing and possibly doing away with code altogether. But you missed the biggest point with ham radio it was to help people. Did you help this man by offering alternative options to learn code? No, you insult him instead. It is you and your kind that will be the downfall of ham radio. Blame yourself.

Why do you find the need to boost your (lack of) self-confidence by
insulting this person by comparing him to Mark? Mark chooses to sit on his
ass sucking the entitlement system dry and contributing nothing to society,
while this person decided to make the best of his what God gave him and he
contributes to the same entitlement system that Mark chooses to deplete.

Earl you are not the Pearl of wisdom, you are the faux Pearl that trolls to
enhance your (lack of) self-esteem.

Something I just thought of at the spur of the moment (not to mention keeps me on topic), some disabled person should sue to remove ALL code requirements, or offer an exclusion to those with disabilities to not have to take ANY code test under the Americans with Disability Act. I'm sure that person could even get a free ACLU lawyer to handle it.

India is not a country we rely on to build super companies (for lack of a better term). Take a look at what we send to India. Toxic chemical factories that would be choked to death by special interest groups and politicians. We also outsource technical support, which is a waste of time and money, good thing companies don't pay them much, but it's a cheap way of saying "we have tech support" without truly having it. Look at the shoe mfg. industry, all moved to third world slave labor countries. Good for the shoe industry as they no longer have to deal with unions and we keep management and development in countries that have the talent and resources to maintain state of the art products. Look at how the auto industry has changed. They sent 1000s of jobs overseas to cut down on union labor (with management and R&D in the US), and the Japs are opening plants in the US (with management and R&D in Japan) that will never deal with the UAW. I could go on forever with this post (and talk about NAFTA), but will end my rave at this point. BTW, changed subject header as it didn't seem to fit. I would have trimmed a few NGs but am unsure what groups you are subscribed to.

Many years ago, 1950s, there was a very active 10 meter ham in Danvers, Massachusetts, during the period of Class A, B and C licenses. He was an arthritic quadriplegic. He was wheel chair bound, lived alone, and required visiting help to get into and out of bed and have his meals prepared and served.

He had a Class C [Conditional] license. He learned to copy 'read' CW in his head although he did not have the ability to send. I don't think he would consider a lawsuit appropriate.

Some of the OTs on this list may have worked him. W1JFS, Les MacCrakin. God Rest His Soul.

Having hired many engineers in my lifetime I can state that good engineers meet several criteria:

o meet the technical requirements established by your customer,

o meet the schedule established by your customer,

o meet the costs established by your customer.

Economics is only 1/3 of good engineering talent.

Well I described a number of alternatives to learning and he persists in saying he cannot learn code. Now I have not insulted him that I know of (although it's difficult to predict what one might take as an insult). However, if someone truly is incapable of learning code, then they are unable to learn to understand the spoken word and to speak. The fact that he can speak and understand the spoken word means he can learn code at the basic level of 5wpm. He is his own biggest enemy.

A completely deaf person can speak and read lips but he/she
still cannot even hear Morse code. What you need to understand
is that something that seems normal to you is missing in some
people. If an amateur radio license required dunking a basket-
ball, could you do it? As one who can dunk a basketball, I can
tell you all you need is enough will and effort and you can do it.

I was unaware of your offers of alternative measures as it wasn't in this
thread. I agree, if he has alternatives at his disposal, it's on him to take
advantage of them.

My point exactly. Recruiting foreign eng talent is driven primarily
by economic reasons. The oft repeated lament by corporate flacks and
politicians that we lack sufficient talent at home is a damn lie.

With deaf people use can use a light or a subwoofer for them to copy code. I don't want to stereotype deaf people, but I have found many of them to be hooked on entitlements and expect unreasonable accommodations. I have a relative that refuses to wear a hearing aid, and then gets angry when there are communication problems. This person is physically able to work; yet sits around on my tax dollars playing the feel sorry for me card.

Deaf persons have succussfully completed the code portion of the testing at all levels of speed. Some use a vibrator attached to their wrist. Others us a light. As mentioned elsewhere "never say never".

But that certainly doesn't satisfy the letter of the regulations.
To do that, they must "copy by ear".

If I don my knee braces, I still can. Can you?

The point is that some things are possible for each
individual and other things are impossible. Anybody
who can't dunk a basketball or pass a MENSA exam should
know how a person feels when they can't learn Morse code.
I personally think it would improve the ARS to only allow
MENSA engineers to be a member. How does that make you feel?

One of the brightest engineers I know, who has a commercial
FCC license and was the engineer at an AM broadcast station,
couldn't get past 5wpm so he was condemned to Tech class for
30 years. He knows more about radio than any ten other hams.

Hello Robert,
I know it was long time ago when you posted this message but maybe you can help me. I am desperately looking for one single mechanical part from the back of TS930S front panel. This is: Kenwood Part No. S90-0401-05 Remote switch shaft, MODE. This is actually a small mechanical assembly which transfers the movement of the MODE knob to the actual switch which is on the other side of the front panel. This part is obsolete and is not possible to repair. Please let me know if you or somebody has a scrap TS930 and could have this part. My radio, otherwise in perfect condition is dead just because this small mechanical part. Thank you.

Not a correct analogy. For starters, completely deaf people have learned the Morse code. Flashing lights and pulse pads have served their needs. Just as they have learned to speak and read lips, they can learn alternative methods of using code.

The 5wpm level is more equivalent to dunking a basketball in a basket that is just above head height rather than regulation professional height. Under those conditions, anyone can dunk a basketball.

The biggest reasons people "cannot" learn code are very simple.

1. They don't really want to and so subconsciously resist.
2. They have been subjected to poor training methods.
3. No one's ever taught them correct practice methods.
4. They have developed unrealistic expectations of the level of effort required.
5. Due to bad experiences resulting from the above items, they've convinced themselves they can't learn and so create a self-fulfilling prophecy.

Every problem that Sal has described has afflicted almost every student of Morse code (except perhaps for the very rare code geniuses). Forgetting letters right after learning them? Been there, done that. Confusing letters? Been there, done that. I've had to bow out of QSOs because my brain freezes up and refuses to keep copying.

It took me 3 months of daily practice of an hour or more every day to get to 5wpm. That's over 90 hours. The average person only needs about 30 hours. I experienced every problem that "Sal" has mentioned. I eventually went on to master the 20wpm. That took 9 months of the same intensive daily practice, over 270 hours. Fortunately I wasn't hobbled by the expectation of learning it in a few weeks. Luckily no one had ever told me I could learn it in a few days or weeks. So I just kept at it for however long it took.

True enough but that accommodation has been accepted for a very long time.
The regulations also said that they must be by hand. A sending test hasn't
been used in decades except as an accommodation for people with hearing
problems, etc. The FCC itself had stopped administering a sending test
before they turned the testing over to the amateur community.

But the letter of the law says they must receive Morse code
by ear. Anything else is a violation of that law. It's
like qualifying to be a life guard by doing a broad jump.

Well the accommodation has been used and accepted for a very long time. The regs also say send by hand but no one has administered a sending test in decades except as an accommodation to individuals with difficulty in receiving.

Your life guard analogy doesn't hold up either. Instead it would be like allowing the life guard to use a row boat instead of swimming out to the victim.

You have just admitted that the Morse code test has been
irreversibly compromised already. A deaf person holding an
HF ham license cannot hear an SOS so the entire purpose of
forcing him to learn Morse code is bogus. He is going to
be using a digital mode, not sitting there with his hand
on the speaker waiting to feel an SOS from a sinking ship
that doesn't even have CW capability anymore.

Believe me, this guy shed tears when he couldn't get past
10 wpm. He has a physical mental tick every few seconds, akin
to epilepsy, that causes him to lose time. He cannot speak
one minute of continuous speech much less receive one minute
of continuous Morse code. When he speaks, some of the time
is silence while his brain is out to lunch. But when he
does speak it is worth ten times the average person's
utterances. He is an engineering genius.

That's what they are replacing the CW test with, the slam dunk. Now all
those hams with their Hover Rounds will have to give up their tickets.

No, it does satisfy the alternative methods of copying code as
specified by the FCC.

You are quite correct. Unfortunately some owners seem to never have
enough money.

I don't think you insulted me -- it was whoever said I don't deserve a
license.

However, I do think it's a bit of a stretch to say that I can learn code
just because I can speak and understand words. You should see what my raw
typing looks like before I go back and fix it prior to hitting send (or
should I say "sned," which was what I typed the first time -- typically four
or five of those per line.) It's pretty bad.

I'm thinking of trying to learn the dits and dahs as strings of written dots
and dashes on paper. According to everything I've been told or exposed to,
that is not recommended. All the training says the goal is to perceive each
letter as a consolidated unit of sounds without any intermediate translation
steps. Well, since I'm positive that isn't working, particularly for
characters of four or more elements ... maybe a graphical alternative is in
order.

You have extracted something from my post that was never there. No one has ever said that the purpose of hams knowing code was to hear a ship sending an SOS.

In addition, he might have a light rigged for cw, which he could see as he moved about the room.

Digital modes fail on a regular basis due to static, auroras, etc. It's a good idea to have a non-voice, non-computer alternative.

Since the late 80's, he could have gotten a medical waiver for the speeds higher than 5wpm. His case proves my point though. i.e. He did learn the spoken language despite his problem. He did learn the 5wpm despite his problem. His problem manifests itself in dealing fluently with the spoken language and also manifests itself in dealing with higher code speeds.

A problem that would affect the ability to learn code affects the ability to deal with the aural/spoken language.

> What's the gist of it, Dee?

1. Incorrect training methods. These abound. There are more bad ones than good ones around.
2. Incorrect practice methods. Many teachers and students don't really know how it should be practiced. They just muddle along. Among other things, that means daily practice not just getting together with a teacher once a week. It also means breaking the daily practice session into 15 minute increments so the brain doesn't fatigue.
3. Unrealistic expectations is quite possibly the biggest one. People think they should be able to learn it in a few days or a couple of weeks. It takes the average person 30 hours to get to 5wpm. At an hour per day, that's one month. A more comfortable pace is 1/2 hour per day for two months. (It took me closer to 90 hours.)
4. Disapppointment created by the above issues causing a person to believe they can't do it thus creating a self-fulfilling prophecy.
5. Not wanting to do it so they end up fighting themselves subconsciously.
6. Negative reinforcement by those who tell them that code testing should be eliminated because it is "useless". Anyone who's seen HF trashed by static or aurora should know better.

Typing and reading are visually based. So it makes sense that those are a problem. But do you have difficulty saying words or hearing them? Just because the typing is a problem, doesn't mean that the aural/spoken is a problem. Reading/writing is a different activity than hearing/speaking and uses different parts of the brain. While I can't imagine a graphical method working for a dyslexic since it's visual, who can say for sure.

By the way, I still have problems with longer characters now and then or combinations of certain characters. I had an awful time trying to copy a call sign in a contest that began with SH5 (3 dots, 4 dots, 5 dots).

Recently I can across a "music" track that is about 5 minutes long that
teaches Morse by the sound of the characters.

If you would find this helpful I may be able to get a copy of it and
place it on an ftp server for you.

Regards

David

Hi all,
Anyone that can assist with an electronic copy of the manual for KLM's 4 element monobander for 20m?

73's

Outsourcing started way back in the 70's. It has only been in the last
decade that anyone in the media and public paid any attention to it.
When layoffs became common place after the dotcom bust then the public
finally realized that the barn door was open and nearly half the cows
are gone. A bit to late.

On the contrary, when I got my ham license in 1952, that
was the major reason given for the code requirement.

Pure sale, no bidding wars.

Summer cleaning out the shack: several items
(terms at end)

1. (dead on transmit) RF Concepts, RFC 2-317 (2 meter brick amplifier), 30 watts drive, 170 watts output. The transmit side of the amp is dead (looked like power transistors gave out over a few minutes of transmit way back and I never tried to locate someone to fix it; the receive GasFET preamp still works). The manual goes with the brick amp. The schematic says the power transistors (assuming that is the problem) are SRF3897 and there are two of them. Schematic looks like two in parallel (many other transistors, too). RF Concepts went out of business some years ago but maybe one of you guys who knows this stuff would like to have a crack at this repair job. $10 for this unit.

2. Two Hamtronics receiving converters, CA-28 and CA-144. One takes input at 144 - 148 and converts down to 28-32 mHz (and I put a 9 volt battery case inside, and small toggle switch), the other one takes 28-30 mHz and upconverts to 144-148 mHz (I was meaning to listen to 10 meters FM repeaters with my 2 m HT but never tried it). These units do not have as low of a noise figure as the best scanners and newer ham transceivers. Both units to the same address, $35 for both. Otherwise $20 each. With manuals and documentation.

3. Yaesu YS-500 in line wattmeter and SWR bridge for 140-525 mHz. Looks fine, works fine. Max power: 200 w. With one sheet "manual" $30.

4. 440 FM Yagi, 10 elements. I think it might be a Hygain but can't remember for sure. No manual or documentation. It was never outside of an attic. At old OTH it was aimed at one 440 repeater (at present QTH, I have way too many trees and barely can get into one 440 repeater that almost no one uses, so it goes 'on the block'). $25.

---non ham electronics------

5. OPTIMUS (Radio shack) AM/FM STA-795 solid state receiver, with manual and documentation. Works fine. $20.00

6. Night vision device: NV-100/NV-100-1 by Moonlight Products, bought through Edmund Scientifi when it was in business. I need to test it at night before releasing it. I think its a first generation device. Has a large telephoto lens with low f/stop, includes manual and documentation. Runs on two AA batteries, and has its own IR diode light souce if one wants to try that. Has not been used for maybe 7-8 years, but worked fine at the time, and was always stored in a stable non-moist room at RT. Was

not used much when it was used (maybe 1-2 hours, total). I seem to recall reading that these units undergo some deterioration in performance with time, but I don't know if that is independent of whether the units are used or not used. $40

7. Panasonic AG-1830, Video Cassette Recorder, Pro-Line, commercial grade. With manual. Used a lot back 10 years ago, not much since then. It has an on-board frame-grabber, but I have lost the remote control which is how the frame-grabber was activated. Complex controls and relatively thick manual. 17 lbs. Some dust here and there. I have not extensively tested all functionalities, but besides the missing remote control, it was recording and playing back last time I used it. But if you want to receive TV signals and record them, you may need a preamp because the input is normally not very sensitive. I was in a fringe area and got noisy images unless I used a TV receiver preamp. New price over $1000. My price $55

8. Hitachi VHS video camera (portable), VM-2500A, with dead lead-acid gel-cell battery (will not hold charge, won't accept charge). Camera (color) still works fine and records audio, too. It runs fine with an external DC power supply of about 9.6 volts 2.3 amps. This is an old style, over the shoulder unit. With manual and documentation, and some cables (can take output from camera, in playback mode, and feed into a video imput device). I think its never had more than about 20-25 hours of running time. My price $30.

Terms:

If you are interested, send email. I prefer to sell in the continental USA. I prefer to ship USPS, but UPS may be less risky in terms of damage. I prefer USPS money order for sum. Sum needs to include shipping charges which I will estimate, and I'll refund any excess if there is excess. If you want insurance, I'll include that in price. No charge for packaging, handling, which will depend on what item we're talking about and I'll do my best to locate packing materials, especially on biger & heavier items. If we go with USPS, I will spring for delivery confirmation and email you the DC number. You'll need to send the money order first.

I am located in southern Delaware. Please wait a few days before expecting a response. In the event more than one person wants the same item, I will work with the first one and tell the others that they are "backup" buyers in case the first one backs out or something. You need to specify how fast you want the shipping to be; UPS and USPS have several grades of service speed (faster is more expensive). If you have a counter-proposal, I'll consider it. Please give you "ship to" address in your first email to me. On the non-ham gear, I will probably "check" the unit to make sure it is at least minimally functional before shipping.

Art, W4PON

"hungry" and "homeless" people are there by their own choice or by choices they have made in their past. The welfare system doesn't work, otherwise there wouldn't be 5 1/2 MILLION people dependant on it.

Yes..... I have a problem with the system when 28% of my *net* profits get paid to the feds to support lazy dead beats, and another 4% goes to the state for the same.

I am retired Military, I served my country for 22 years, My father was born in this country by the grace of god, and couldn't speek the language until he was in grade school. When I retired from the miltary, I started my company and have worked my ass off for 10 years to get to where I am now, finally starting to make a comfortable living.

There are too many jobs out there for folks to be unemployed, homeless, or hungry. Those that are unemployable are those who by their own choice, can't seem to show up to work, let alone on time...those who can't seem to show up for work sober and not hung over, and those who can't seem to be able to pass a drug screening. If I could find somebody that *COULD* meet those minimum standards and had a little common sense and a desire to learn, I would hire them in a heartbeat, and they will earn good money.

They have made their choices.... I for one am damned tired of having to foot the bill for their irresponsibility, lazyness, and feigned ignorance(you can't be ignorant and be able to sponge off the system)

(Reagan's Welfare Queen was a myth, you know.)

When a company moves offshore they do not reduce prices to the end
users. They increase their profits. Most big companies don't even
pay income taxes because they are legally running out of a drawer in
some Carribean island.

Eventually the middle class will be gone due to outsourcing. That
will be the end of the USA.

i hate to play devil's advocate, but i can read CW with spectral analysis
software. several of us on the very low bands are doing that.

yes, the chances of some deaf guy "hearing" an SOS is pretty slim.

it's sad that people get alienated from hobbies. it's also a fact of life. i downloaded some composition software, and it turned out i SUCK at making digital music.

i can play the second movement of Moonlight Sonata, but that's about it.

i remember this girl in chemistry class. she studied 5 hours for a test. i studied 10 minutes. my score was 30 points higher than hers. i wasn't necessarily smarter than her, i just knew how to study, and same thing with CW.

i learned Morse Code at age 15. i got up to 25 WPM, perfect copy. i made QSOs, did a few contests, and quit for 9 years.

i now copy at 18 WPM, which makes me think i learned it like it was a language.

some suggestions. use Farnsworth, copying characters at 18 WPM is less annoying.

make QSOs! would you learn a language by using audio CDs, or would you talk to native speakers?

find out what the format of the test QSO is!

i didn't study much for my novice code test. i had no decent tapes, and i had to borrow my dad's computer to use software. computers back then were $2000 and no kid had one.

so anyway, i use Supermorse as recommended by my club. i get to the test, realize my code sucks, and luck out because they do a Supermorse QSO.

it's easy in today's world: free practice MP3s and $50 computers.

>
> Dee Flint, N8UZE

if you are contesting or DXing, CW rules.

HF phone contests will drive you insane, esp if you want to win an award.
even 10 meter phone was wall to wall stations from 28.300 to 29.000. i had
phased Yagis, and had to go way high, or end up stomping on someone.

if you want to run DX, good luck with 100 watts on SSB.

That may be what someone told you, but it was not the reason. The reason was that it was part of an overall "radio education" and it was one of the fundamentals of radio even in the 1950s.

Back when I was young and interested I lost my desire to learn code when I started monitoring the ham bands. It all seemed too formal, and then like it is now, you have a large segment that think you are trash if you don't have the highest obtainable license. Even this thread proves it. You have a large contingent hell bent on having CW testing with any class, even though I never plan to use CW. I could get my Tech ticket, but then all I'm going to hear is that I'm a no-code tech. I rather be a CBer as we have no cast system.

You're a tough guy.

During a more civilised time a company went into business to provide
jobs and make profits and to be part of a community. Nowadays
corporations are extranational, have no local ties and just milk
markets dry and move on.

Corporations pay way less than half th cost of running governments,
even though they are the major beneficieries of what governments
provide. This is because we let them write their own rules.

First not every homeless and hungry person is there by their own
choice. There are those that the system chrushes and grinds into
pieces just for beign at the wrong place at the wrong time. The
welfare system does work. Yes decision and actions in all our past
make differences. Yes some want to live the way they do. Somewhat out
on the fringe of society.

What you pay is part of doing business. I bet you pass most if not all
off when and where ever you can.

Corporations do pay taxes. The expense of taxes is often passed on
where feasable. Often these are in higher selling prices. Often taxes
do intrude on profits. When they do, there are steps taken to regain
that profit. Outsourcing is a means of regaining profit. Cutting
benefits and maintaining salaries is another. There are other means
also.

(see original post farther down)

Update (as of 7:40 pm): I have a pending deal for the night vision scope
and the RFC brick amplifier. If the deal with those interested parties
falls through, I will make an re-announcement.

I forgot one more item: a single pan, digital balance (transistorized),
Its an "Ohaus" model C305, and reads in grams or ounces. It has a
calibration weight (300 g), a wall plug transformer supply, and can run
off an internal 9 volt standard transistor battery. And, yes, the manual
comes with it. It also has a button for "tare" weight (eg. put an empty
container on, press "tare" and it re-zeros the digital readout. The pan
comes off the unit for shipping, and just drops on. I was using it to
weigh letters and small packages. Now I have some new scales for
that. My price: $20.

I have problems with most characters of four or more elements length.
Exceptions are <period> and <Q>, for some reason. As I have said here,
after hearing dit-dah-dah-dit identified, whatever it is, I cannot
subsequently hear it and know what it is. I think my own first name
initial, <J> is some combination of three-and-one or one-and-three, but I
can't remember it. Oh yeah -- I know <V> because the dit-dit-dit-dah sounds
like the 1812 overture.

I dial a telephone with two fingers -- one pushing the buttons and one
holding my place in the phone book, since I have to go back and look at the
number repeatedly. Yes, I do memorize phone numbers, but I may invert the
digits when I try to dial them. This is a royal pain in the ass.

When I joined the Navy in 1962, one of our tests was for clerical skill,
which involved inspecting columns of numbers and calling the entries on each
line either ALIKE or DIFFERENT. I scored a 35, lower than anybody I ever
met. I wanted to be a Yeoman (clerical duties). Instead, they sent me to
ET school and I've never looked back.

I'll read any responses, but I think I'm pretty well talked out on this one.

I'm picking up my new Prius this week and am curious about running radios in the car. The techs at the dealer stare at me blankly when I bring it up. I plan to operate an Icom IC-706 on HF and 2m. My assumption is that the radio would run off the small 12v battery used for accessories and engine starting. Since it's impossible to idle the motor while standing still, the battry would seemingly run down pretty quickly.

Any suggestion or comments?

Hi Jim!

I've had my 2005 Prius for almost a year and have used it on VHF and UHF at 50 watts and works well. I haven't tried HF but have listened with my 817 while in the car and I didn't hear any computer noise to speak of.

Yes, that little battery in the back is a small one, but the computer(s) monitor that and will run the engine if it is in need of charging, even if you are sitting still. Same goes for the AC or any of the other things that drag it down.

Having the battery in the back is kinda' sweet. Not a lot of extra heat to kill it sooner than later (I'm in Arizona) and I put the body of the yaesu 8800 in the storage area near the spare. Ran the antenna up behind the seals and onto the roof and simply use a mag mount. Not easy with an HF antenna of course, but I'm sure there would be a way.

It was a snap hiding the wires and making a first class looking install with it. No noise at those freqs.

Hope that helps. Have fun. That is a very cool car.

I am aware of the car but have no practical experience, so here goes with a
few suggestions.

Could the small battery be 'swapped out' for a larger capacity one?
(Physical size/ charge available from alternator are the things to look at)

Is it possible to take a 12V 'tap' from the large batteries that power the
electric motors?

If none of the above the only option I can think of is a split charge
circuit and another (yes I know there's enough batteries in it already)
battery in the luggage space. (don't forget to make sure it's vented)

Hope this helps
73's & good luck! Brian

I don't know about the Prius in particular, but several years ago I owned a pure electric car. At that time the up-and-coming technology was a DC-to-DC converter that would maintain charge on a 12 volt battery by getting power from the traction batteries, which were commonly 50 to 100 volts. Without the converter the 12 volt accessory battery would be drained by lights and radios until the car was plugged in for a recharge. The biggest problem was trying to keep the headlights bright.

I've no idea how easy it would be to make a connection to the Prius traction batteries. Probably not recommended by the service department. But if you find a simple way to do it, you might be able to keep the 12 volt battery charged.

There is a group called CalCars (http://calcars.org/) which advocates modifications to hybrids to let them run more on electric power. They might have more information.

Doesn't the Prius start the gas engine if the battery is getting low?

It would seem that any battery that is used for starting a
substantial engine should not "run down pretty quickly"
from the load of a tpical radio.

How would you describe your welfare stipend?
Will you move on when it runs dry?

What "provider benefits" may those be, Dr. David?

Hm-m-m. I can hear that in my head. ... thought it was the 1812 Overture.

BT

Playing the selection is mighty convincing: Ol' Ludwig pops off some V's
right at the start. I do not seem to have the 1812 Overture handy, so here
I tread ever-so-lightly ... not being much for knowing good music. I can
run bits of 1812 through my head, too, but not much. (I just get started
and run out of headroom.) I shall seek it out. TKS & 73

MORE: I just played the 1812 Overture and didn't hear any V's. Heard quite
a few T's and E's ... but no V's.

Thanks.

it is a 12(?) minute piece, and i ran a few minutes through my head. there
is a short part that goes dit dit dit dah.

if you get the real cannon / bass drum recording, it is incredible.

I've been looking for a flat black colored person but have
been unable to find any. I also have not found anyone who
is white as a sheet of white paper. Alas, all I have found
are people who vary in shades of brown earthtones. By looking
at a spectrometer display, it is actually hard to tell one
from another.

Phony's can ignore. This question doesn't apply to no-codes.

Nickle Generals and Extras:

If the 13 and 20 wpm CW exams came back and you had to pass the proper code exam for your class to renew, 13 wpm for general, 20 wpm for extra, would you renew your license?

Yes to the Extra part. I have been trying to get to 20 wpm all my life
and I continue now. It has never made anymore sense to me than a
requirement to be able to run a five minute mile. 16 wpm seems to be
the fastest code I can differentiate with my ear/brain connection.

If the code guys need a special chunk of the band to operate high
speed code they can petition for it. My hat is off to those who have
both the code skills and the technical skills to be superior to me on
any subject.

However, I am embarrassed as a long time Ham by those who would deny
the hobby to anyone without Code skills.

I believe the ARRL offers Award Certificates to those who can achieve
the higher speeds.

Thanks for the opportunity to speak out. Another characteristic that
earns no respect from me is the matter of remaining anonymous on the
Internet. I expect that your CB handle is something like "Bad boy" or
"Rain Brain". If you were not a troll by choice you might be able to
make a positive contribution some where.

> Wanted: Motorola Spectra Accessory Connectors (9 Pin)

Uhhh... pardon? That doesn't sound quite right.

The accessory connector on the low-power dash/trunk-mount radios is
a D-sub 15.

The accessory connector on the high-power trunkmount radios is a D-
sub 25.

The only place I've ever seen anything resembling a 9-pin connector
is on the motorcycle Spectras which use the thing as a microphone
connection.

Are you sure you're looking at the right connector?

Happy tweaking.

Well, Slow Code, I'll give you a straight (and I hope friendly) answer to your question. I'll then give you a straight (and I hope not-unfriendly) explanation as to why I believe people are calling you a troll.

The first answer: well, I think I'd certainly *try* to renew my license. My CW is distinctly rusty - I use it only rarely, and I'm not sure I've ever managed to copy 13 WPM (let alone 20) well enough to pass the one-minute-error-free barrier, or be able to answer the necessary number of questions. So, it'd take a bunch of listening and practice to reach that level.

I'm not sure I have enough time free to do it. I've got a busy life, work full-time plus a bit, and much of my ham-radio playing time goes into other areas of the service (I'm an ARES/RACES AEC for my city, a mutual-aid comms responder for the county, and I've put in a huge boatload of hours over the past couple of years helping redesign and rebuild and debug the local hospital's repeater system). Getting really serious about doing high-speed CW would consume a lot of time, which would necessarily subtract from my ability to (e.g.) spend many hours of circuit analysis and modelling and experimentation to figure out why the fancy commercial repeaters we bought had such lousy-sounding audio (turns out the designer had mis-used the discriminator IC, forcing it to "clip" the signal internally, *and* had messed up the design of the de-emphasis network.)

And, I have no assurance that I'd ever reach that level. As several other people have commented, it's perfectly possible for people to work, hard and honestly, at copying CW for years, and never be able to reach the 13 WPM level. I strongly suspect that to some extent, CW-copying is tied to certain sorts of neurological organization in the ear/brain system - some people may be born with more potential ability to handle high-speed CW than others. Effort or no, some people seem unable to learn to copy CW at all, others can do so but never become very good at it, and *many* people report hitting the "13

WPM wall" and never being able to copy reliably at rates much faster than that.

Now, in your previous epistles on the subject, you and your nym-clone were advocating not only requiring testing for 13 WPM (General) and 20 WPM (Extra), but also making the no-code license a one-year nonrenewable. If that proposal were accepted, there's a strong possibility that I'd end up being kicked off of the air the next time my license came due... either because I was unable to push up to 13 WPM no matter how hard I tried, or because I'd devoted my time to other aspects of ham radio and hadn't taken time to study-up.

So - that's my answer. I might end up being able to renew my license (although probably not at the 20 WPM level), I might fail the CW test, or I might just decide that the "old boy's club" had made it clear that they didn't want anybody other than rabid CW operators on the air, and decide to go do something else productive with my time.

Now - that being said - let's address why you were being called a troll. I think it's because it's quite clear to people reading these threads that you have a serious agenda, sir. You've made several attempts (apparently under several posting IDs - some refer to these as "sock puppets") to drum up support for your CW Uber Alles rules change proposal. You've scoffed at, or simply ignored, the many people who have pointed out that your proposed changes are 180 degrees out of phase with the international trends (i.e. the WARC rules), and with the FCC's publicly-stated feelings on the matter, and that your proposals are essentially equivalent to ones which have already been ruled out by the Powers That Be.

In short, the "what if?" question you asked is entirely hypothetical. There's just no chance at all that the FCC would enact the sort of CW-centric licensing rules you have proposed. Ain't gonna happen. Your asking questions about "well, if it _did_, what would you do" is probably part of why you're being called a troll.

Numerous people have responded to you, expressing their opinions that your rules would decimate the ranks of amateur radio by forcing off of the air a large percentage of today's licensed operators. Your "friendly question" seems to be intended to try to address that question, but you phrased your inquiry in somewhat-loaded terms, and in a way which almost guarantees that you won't receive an accurate and unbiased set of answers which actually represent the feelings and opinions of this newsgroup's readers.

To sum it up, your way of presenting your agenda probably leads people to believe that you aren't serious about debating or discussing the issue... and that's probably another part of why you're being called a troll.

I agree with you that the Amateur Radio Service (and hobby) benefits greatly from being hams to like to study, learn, advance their skills,

and use what they know. That's one of the specific purposes of amateur radio here in the U.S., and I think it's great.

I *disagree* with you that the ability to learn to copy CW at 13 - 20 WPM is, or should be, the "litmus test" which decides whether a person is Worthy of being a ham.

Your fixation on CW is, I think, actively interfering with your ability to support ham radio by promoting *all* aspects of technical and operational learning. I believe that your attitude hurts ham radio more than it helps.

That's my $0.05 worth, adjusted for inflation. Take it for what it's worth for you.

[and, I'm sorry to say, based on your past postings I don't really expect you to address the meat of what I've said. I expect that you'll toss off a one- or two-liner, dismiss what I've written, and keep on as you have been. I'd be pleasantly surprised to be wrong about this!]

The hobby is almost dead anyway,nothing is going to save it. No one
cares about Ham radio.Most people under 30 have never heard of it and
don't care. All they want is their cell phones, Ipods,etc. The FCC
can't save it by changing anything.

hi ham radiogroups, im after the internal power control or alc inside of a icom725 hf transceiver the radio is doing way to much power for the power supply, it currently is doing 150 watts it needs to be turned back down to around 100 watts .thanks in advance david from nsw australia .

Howard,

I have a pdf of the full service manual -- but it's around 19 MBytes
which is a bit big to post to this newsgroup. Want me to e-mail it to
you or shove it onto a web server somewhere?

==========
If the current RF power output itself is not a problem ,but the max
current which can be supplied by the power supply unit (presumably
13.8V) I would suggest to put a sealed (car) battery in parallel.

The quoted 150W RF power is highly likely PEP ,so when operating SSB the
average current consumption is possibly half the peak current or less
even with some speech compression .
The battery will happily supply some of the current during peak demand.

Since the battery is permanently 'on the charger ' being in parallel
with the power supply unit , you don't need a deep cycle battery ; a
cheap and cheerful 40 -60Ah sealed car battery will do the job well.
It is essential to put a 25-30 A fuse in series with the battery .

Note : I recommend anybody to use a (sealed) battery and a low power PSU
to feed a transceiver requiring (13.5 -13.8 V-DC) external power.
During rx periods the PSU output could be (automatically) disconnected .
Receiving on battery power alone is often beneficial eg less noise and
mains borne interference. Although the low impedance of the battery
will cause it to 'kill' most external mains borne interference already.

A local ham uses a FT857 with a 110Ah sealed battery, without a mains
fed PSU . When not operating the battery is connected to an automatic
car battery charger ,which is only disconnected during operation.

3061. traveling w/ gear

Newsgroup: rec.radio.amateur.equipment
Date: 2006-07-02 15:16:06 UTC
From: Gary <gbelcas@comcast.net>
Message-ID: <_4udnY4v7-KlfjrZnZ2dnUVZ_tKdnZ2d@comcast.com>
Source record: 8747

I am traveling to the Outer Banks,NC this summer with the family and would love to bring along my qrp rig. The 'rig' of course consists of radio, battery (closed, gel), antenna, key... I am looking forward to the point when this conglomeration of 'unusual'-appearing electronic gear etc goes scooting thru the xray at the airport. Pre 9/11, I took this gear everywhere (internationally) without ANY difficulty whatsoever. Just not sure that will be the case now however. So my question to the group is: who's traveling with their gear and what's the best approach (save for shipping it ahead - looking into that possibility already). Thanks.

gary

Go to
http://www.icom.co.jp/world/support/index.htm

click on 'Manuals,' agree to the license, scroll down to 'Amateur,'
download the manual for the IC-725, look at page 31 (34 in the Acrobat
window).

I think you may be interested in 'R210' for the 100W power adjust.

Watch the current, 73!

I've traveled all over the U.S. with HTs, scanner receivers, chargers, and antennas in my carry-on suitcase. Never had anyone so much as question it. As long as none of the equipment is on the prohibited list you should have no problem. You should be prepared to power up any of the battery-powered gear to show that it is operational. Take a copy of your license along just in case you get one of those aggressive / untrained TSA types.

Yup, I stopped at the Advanced and then the code requirements for Extra
were lifted. So there I stopped. Might do it anyways for the extra few KC
the license grants me.

I have one that's in so-so condition. I had the radio too but sold it
and forgot to ship the manual.

At least it's probably better than a copy since the photos are clear.

Give me an address and I'll mail it to you. If you want to send me
back whatever postage I had to use it will be a deal.

3080. How to calculate increase of home wireless router range?

Newsgroup: rec.radio.amateur.equipment
Date: 2006-07-04 05:57:12 UTC
From: Beverly Erlebacher <bae@cs.toronto.edu>
Message-ID: <2hqacpnj1nwj$.1683sqqzgbbo2$.dlg@40tude.net>
Source record: 8516
Cross-posted to: alt.internet.wireless,rec.radio.amateur.homebrew,rec.radio.amateur.equipment

Can you help me roughly CALCULATE how to increase the range of my home Internet wireless WiFi setup to a shed 300 feet away from my house?

Presently, I can walk about half the way through the wooded area to the shed with my laptop in hand before I lose the connection to the PCMCIA 802.11b,g Linksys card. Basically I need to gain 150 feet in "range".

But how?

At the store, I immediately become confused as I try to compare $30 USD omnidirectional antennas (D-Link ANT24-070) that boost "power" by a claimed 7 db; $50 USD directional corner antennas (Hawking HAI15SC) that claim 15 dbi (whatever a dBi is); and $150 USD 802.11N routers that claim to boost omnidirectional "range" by 4x (Linksys WRT300N).

How does an omnidirectional 7 db or directional 15 dBi boost in "power" equate to range?

Approximately how many decibels of (omnidirectional or directional) power do I really need to boost my WiFi range from about 150 feet to the 300 feet I need?

Looking up what a decibel is (http://en.wikipedia.org/wiki/Decibel#Definition), I calculate the D-Link ANT24-070 omnidirectional antenna gives me about 5 times the power (assuming 7 db = 10^7/10 ~= 5); but does this get me the additional 150 feet of range to my shed?

Spending almost twice as much money on the Hawking HAI15SC directional antenna gets me roughly 30 times the power (assuming 15 db = 10^15/10 ~= 32); but is that enough power to get me the range to my shed?

Indeed, is there some way to add a Hawking 15db antenna on the receiving end to get 1,000 times the power (15 db + 15 db = 30 db = 10^30/10 ~= 1,000); but what would I hook the wire output from this receiving antenna to in the shed (I can't hook it to the pcmcia card, can I)?

Given those db calculations, how do I compare the antenna options with replacing my home 802.11b,g router with the 4X range $150 USD Linksys 802.11n WRT300N router and the required $120 USD Linksys WPC300N PCMCIA card (assuming 6 db = 10^6/10)?Will this three-antenna 802.11n router be forced to drop down to 1X speeds because inside my house my kid's laptops will all be using 802.11b or 802.11g? Or can the router work on both 802.11g to one computer and on 802.11n to the other computer at the same time?

I'm so confused!

All I want is to make a well-informed buying decision to increase my WiFi range reliably to 300 feet to a known point.

Can you help me sort out all these very confusing variable (to me anyway)? I have no training in electrical engineering; but I can google.

Thank you,
Beverly

Hi Dave,

First thank you for taking the time to help me and anyone who read this.
Second, I'm going to have to go slowly with you so I'll respond one by one.

Third, does your statement that 6 dB of gain equates to 2 times the range
mean that the "square root" of the power difference is my key to
calculating the range?

That is, is this range calculation from dB power roughly true (based on
what you said)?

6 dB = 10^(6/10) ~= 4X the power, where the square root of 4X equals a
doubling the range (assuming an omnidirectional antenna)?

Beverly

> 6 dB = 10^(6/10) ~= 4X the power, where the square root of 4X equals a
> doubling the range (assuming an omnidirectional antenna)?

I'm hoping I can extrapolate from the above statement to calculate the dB gain for the $150 Linksys WRT300N router which claims a 4X range improvement (so I can compare the $50 antenna's effect with that of the 802.11n router).

Following your lead, the power improvement necessary for a 4X range improvement is 4^2 = 16X power gain.

This 16X power gain then equates to about 12 dB (since 12 dB = 10^[12/10] ~= 16X power).

So, is it safe to calculate that the claimed 4X range improvement of the Linksys WRT300N wireless broadband router can be compared to that of a 12 dB gain omnidirectional antenna?

> for the same actual amount of gain.

Hi Dave,

Oh my. I guess the Hawking marketing folks were trying to trick me by
quoting a decibel number that was higher those I compared with.
15 dBi ~= 15 -2 ~= 13 dBd

That makes the $50 USD 15 dBi Hawking HAI15SC Hi_Gain Antenna drop down
from a gain of 32X power to only 20X power which gives me about a 4X range.

13 dBd = 10^(13/10) power ~= 20x power

Assuming the square of the power is the range, I get 4X range.
20^(1/2) ~= 4X range

Assuming my reliable range is 100 feet, that equates to 400 feet of range.
100 feet * 4 = 400 feet range

Interestingly, for comparison purposes, that is the SAME RANGE that the
much more expensive Linksys (Cisco) WRT300N router claims.

Do these calculations make sense?
Beverly

>
> 6 dB of additional gain is four times the delivered power at a given
> distance, or twice the range for the same amount of power.

So that I may compare the different options available at the store to me
for increasing my range, are these simplified calculations below correct?

a. 3 dBd additional gain = 10^(3/10) ~= 2x the delivered power
b. 2x power = 2^(1/2) effective range ~= 1.4X the range

b. 6 dBd additional gain = 10^(6/10) ~= 4x the delivered power
b. 4x power = 4^(1/2) effective range ~= 2X the range

Can someone let me know if these calculations are correct because that
helps me equate the different antennas and routers to the one measure I
desire, which is effective range in the area of 400 feet.

Hmm. I wonder. This is too good to be true. So, I will be a bit critical with you (i.e., the scientific method) just to "test" the assumption so that I can be sure I understand your position.

Assuming a 9 dBd increase in the directional gain from putting a pie tin behind one of my existing router antennas, that equates to either 280 or 380 feet of range based on the calculations below.

a) 9 dBd = 10^(9/10) power gain ~= 8x power gain
b) 8x power gain = sqrt(8) range gain ~= 2.8X range gain
c) 100 foot range * 2.8 ~= 280 foot range

I'm a bit confused about the "range gain". May I ask if thta 280 foot range is the total range or the range improvement?

That is, is my range with a pie tin behind the antenna 280 feet in toto; or is the range now the 100 original feet + 280 additional feet which equals 380 feet in toto?

I always liked the idea of the 13/20 wpm requirements because it did push us to greater heights of achievment.

Some want to be Doctors and some want to be rice pickers. That should not be taken away from us. In one country I recall, it was mandated that ALL would be rice pickers at the barrel of an AK47 by sadistic nut jobs with a grudge against achievers. Of course the result was 2 classes: The bullies and the rice pickers. Perhaps the bullies had little regard for anything but rice and violence.

Mastering the code and advancing in speed requires determination and control of ones emotional state to allow the information to flow. This is very difficult for beligerant people to do, so they complain, bitch and cajole rather than just doing what needed to be done. As for the technical requirements. Not enough. Even beligerant people can learn to field strip a rifle.

One of the greatest mistakes people make is to try to analyze and manage things beyond their control. The ear/brain thing people are talking about is irrelevant.

The process is there if you let it happen. Designed by The Creator. Forget about concentration, forget about analysis. How many of you really think about all the connecting tissues that have to be pulled in order to just walk? Just start writing down on paper what you are hearing. Don't think about it at all. Above all find the peace to release the anxiety of missing a word or character and just continue. This is where the self-control comes in. Soon you will find the errors less and less and you will be able to fill in the missing characters and words by memory.

Find the peace of Jesus and all is yours.

Hi Peter Pan,

Oh my! Is "wireless" daisy chaining workable? Is it that easy?

I did not think I could just daisy chain multiple routers! Are you sure?
(My shed has no power but I think I could run an extension cord into it if
that would make things workable.)

Would I just set the second Linksys router (which, amazingly, has it's own
wikipedia entry at http://en.wikipedia.org/wiki/WRT54G) in the shed on the
same channel (SSID=12, name = default) as the first router in the house?

That is, could I put one linksys WRT54G in the house (perhaps with one
antenna replaced with a 7 dBd higher-gain directional antenna); and then
put the other Linksys WRT54G in the shed 300 feet away (perhaps with one of
it's antennas replaced with a similar 7 dBd directional antenna)?

Or, is it best to hardwire with cat5 the first router downstairs in the
house to the second router, say upstairs in the attic window pointing the
antenna toward the shed? I didn't even know that two routers could be daisy
chained. That might solve my dilemma.

Can someone confirm that two routers could be daisy chained either by wire
cat5 cable or by wireless signals as long as they use the same SSID channel
and network name? That solution seems to easy to be true ...

Beverly

> If your goal is to increase your range then add an extender
> (hams would prefer to call them repeaters).

Oh my. The seemingly perfect option.

I had come across the concept of wireless "repeaters" in my initial googling before I went to the store, e.g., in this Microsoft "how to increase range" article http://www.microsoft.com/athome/moredone/wirelesstips.mspx and in this "Extending WLAN Range" article http://www.wi-fiplanet.com/tutorials/article.php/1571601

The repeater most often recommended was the "Linksys Wireless-G Range Expander WRE54G".

However, I can't find that 802.11b,g WiFi repeater (aka range expander or extender) anywhere in the local stores. The salesperson who sold me the $300 USD 802.11n router and PCMCIA card combination said they didn't work so they dropped it.

This solution seems to be the most elegant of all (but someone else suggested just using a second router).

Can someone unconfusify the situation?

Is placing a repeater (on the same SSID) in the shed really the same as adding a second router instead?

Beverly

Hi Stephen,
I'm confused about this "access point" thing.

Is that the same as a "router"?

Is it as simple as buying a second router (routers are familiar to me) and
just hooking that second router to the first router by cable and that would
extend my range by the distance of the cable connecting the two routers?

This is a key confusion point for me!

Beverly Erlebacher wrote:
> I'm confused about this "access point" thing.

An access point is a device with an ethernet port on one side and a wifi port on the other. In technical terms it would be called a "bridge". It "bridges" two seperate network segments, although in this case they use different topologies (100Base-T and WiFi).

> Is that the same as a "router"?

The usual WiFi router consists of a four port ethernet hub (LAN ports), a seperate single ethernet port (WAN port) and a WiFi access point. It is set up to "route" between the single (aka WAN) port and the other two ports, the LAN and WiFi. Most of what it does for routing is NAT (network address translation) and some sort of IP tunneling.

If you ignore the WAN port and just use the LAN ports, you have a four port hub and an access point.

> Is it as simple as buying a second router (routers are familiar to me) and
> just hooking that second router to the first router by cable and that would
> extend my range by the distance of the cable connecting the two routers?

Yes. Just make sure to use the LAN ports. It would be best to use different channels. Most WiFi clients are smart enough to use the channel that is the strongest if they have access points on more than one with the same SSID.

Make sure to use encryption. Encryption is NOT to keep your data safe, nothing can do that. If someone is intent on accessing your network, WEP encryption will not keep them out.

What it is for is to convince the guy driving down the street looking for an open network to send out SPAM, or "share" kiddie porn, to drive on. Unfortunately, most users don't even change the SSID of their network, let alone set an encryption key.

Having tuned in late, if you want to have an open network, look up PublicIP. It's a "live cd" that runs on a PII or better (x86) computer and provides all the functions you need to offer a secure and safe open network.

Geoff.

I am getting older and the 940 is getting heavier ..... looking at the 897 for FD use and as a backup .... I did check e-ham and the related comments which would probably fit essentially all the equipment out there .....My primary concern is if the 897 is an acceptable plus CW radio ..... I don't really care about the SSB attributes or deficits. Now don't say the K-2 with 100 watt amp as I built a K-2 and don't have the time at present to pursue another build ......although I really like that rig ..... Thanks in advance to all .

That is why I have always proposed that licenses shouldn't be
automatically renewable. When a license expires or is just about to
expire the ham must retake and pass all exam elements required for that
license class before it can be renewed again.

99% of the hams on usenet hate my proposal. They think you shouldn't have to be proficient at anything to have a ham radio license. I think the reason all this came about was after ham radio was dumbed down by restructuring alot of CB'ers were able to get licensed and oppose anything that might required you work to be proficient and valuable asset to the service.

I know you're right.

Hams just want to be appliance operators these days and they don't want license exams that will interfere with them getting to those appliances even though it means being less worthy. I don't see anyone modernizing like everyone says is happening. They just get their licenses and grab a microphone. What percentage of hams have a computer connected to a radio? Probably less than 30%. Hams don't want to modernize. Guess we just have live with inferior operators on the bands from here on out. Then again, maybe hams shouldn't be required to be knowledgable or have skills. Requiring skill and knowledge is too old skool. Everything must be outcome based these days, even licensing. It ain't like we have to help out in emergencies or anything. Thanks Dave, I hadn't thought about it like that before.

Just exactly what are you trying to babble out now? Having more qualified
hams will kill the service? An amateur radio license isn't worth enough
that you should have to work for it? License candidates are lazy and
won't work to get a license?

Please babble to us how requiring more proficient amateurs will kill ham
radio.

Nonsense. That's an illogical conclusion on your part, and _not_
something which has been stated, or can reasonably be inferred from
the postings that I have seen in these threads.

Well ...

It would probably reduce the total number of hams. But those who just
want to buy a radio, plug it in and yell at people can still buy a CB
set from RatShack.

It's the same story over and over. Usually an outcasted ham posts
to rec.radio.cb in this derogitory manner. It's a amateurish attempt
to self justify their superiorirty. They simple put down others in
order to bring themself up.

The only problem is this. If they were truly superior they would never
feel the need to do this. When they resort to putting CB down it does
just the opposite of what they think. It exposes an inferior feeling
and their self conscienceness to it.

Maybe it is me, I must be missing "something". I started out with CB - got into Ham AND Electronics due to my admiration of the latter. Both services have their place. Each "does" have it's share of lunatics. There "used" to be a channel here where EVERY NIGHT - about 4 or 5 would do NOTHING but fight. That makes no sense to me. They threatened to fire bomb each other, kill each other, kick each other's ass, etc. It was plain ridiculous. A waste of money on Radio equipment, electricity, etc. I've heard some hams get on air and do just as goofy of things. Me, I prefer to get on whatever band, have a nice conversation and call it a day. Just like any group, be it groups of humanity, cops, "professional driver", doctors, lawyers, etc..... we ALL have our bad apples. That will never cease.
Why not try to "enjoy" life with out the provocation relating to radio - etc. Just because I have an Extra class license - does NOT make me any better than many CBers. There are many who know electronics and just chose

to never go get a license. Same with 2 way radio techs, they chose not to get involved. No big deal.
Why cut each other up? JUST ENJOY THE HOBBY..... Cutting each other up, fighing, etc - is NOT "enjoyment".

Screw all the a$$hole answers. Here is the real lowdown:
You will find jerks on Part 95 and Part 97 bands.
You will find fine folks on Part 95 and Part 97 bands.

Three years ago I got my ticket. I found more bands to work plus
my CB. When I can't find someone on 2 meters, I can check out 440.
If that proves to be dead, I can always find someone on channel 19!

Get a scanner and tune from 144 to 148 and from 438 to 450. You may
hear a lot of the same voices on there that you hear on your CB!

Finally, repeaters are great for a consistent long range connection,
however most 2 meter action occurs on simplex, just like CB. Many
times, it sounds like CB. I find most of the extra cl ass hams are
the ones with the attitudes. The rest are OK.

Don't give up your CB. Just add more radios!

I've been thinking about 2 meters, but I just don't see me leaving 11
meters. I can go freebanding on SSB and still listen to the locals chew the
fat or fight when they're drunk. Channel 19 offers up some crude
entertainment from time to time. I also use the scanner and get the scoop on
what kind of trouble the locals are getting into.

I think any inbred hick with a CB radio in his truck is too stupid to ever pass an amateur radio license examination. In fact, I'd even question how he obtained a driver's license -- if he has one.

Is anyone in need of the txco for a ft1000?

I have a good one removed to upgrade the 1000 to a "D"(funny, it was
sold to me as a "D").

In any case, it MAY fit other rigs.

$25 shipped USPS M/O in CONUS.

Thanks,
MArk

Since you are in Australia and you probably do not have a Yaesu repair
facility close by I would stay away from their crap radios.
Their VHF/UHF mobiles are known for poor performance, poor reliability and
just crappy built quality.
I have owned radios from all the major manufactures and Kenwood, along with
Icom are some of the best for the dollar.

A "Bullet-Proof" mobile for the money ($269 US) is the Kenwood TM-G707A.
Good performance all around.

I have a Yaesu equivalent FNB-27 battery and I lost the charger. I picked up a replacement from Radio Shack last night, but I don't know if tip should be positive or negative, and couldn't easily take the battery apart. It's stone-cold dead, so I can't just hook up a meter to it. Any info would be appreciated.

Also, the charger that I got is a 500mAh charger, I just noticed that this is a Ni-MH battery. I'm not going to have any issues, am I?

I personally have never had a problem with *any* Yaesu radio that I
currently own, or have owned in the past. I like their VHF, and dual band
radios. I do however prefer Kenwood for HF.

3143. Help - Drake TR7 getting flakey

Newsgroup: rec.radio.amateur.equipment
Date: 2006-07-07 15:50:43 UTC
From: AK <nomail@aol.com>
Message-ID: <npvrg.1066327$xm3.9516@attbi_s21>
Source record: 8679

My faithful Drake TR7 (SN 3119/ purchased new in April of 1979) has developed a power output problem. The TR7 generates normal power output at turn on, but after a few minutes of transmission the ALC becomes active and starts cutting back the power, with the output shutting down to a fraction (1/10th) of normal power. It appears to continue to work (CW, SSB, and psk), but the reflected power jumps up (suggesting out-of-band energy). The antenna is not the problem. I have checked the transmit relay, cable and board connections, and switch contacts. All appear to be OK and not contributing to the output problem. Running reduced power (25 watts) slows down the ALC coming on a little, but not for long. The TR7 receiving is stable and normal for all modes and all bands. The problem is not band related either.

Has anyone seen this problem or have an idea what is going on?

Any suggestions on the best place to get it repaired?

Andy, K4YKZ

Message-ID: <bJyrg.8$gf1.106601@news.sisna.com>
Source record: 8682

Andy - Many of the DRAKE TR-7 problems can be traced to its type of motherboard construction with daughter cards plugging into it. The large number of connectors get flaky with time and cause all sorts of problems. Can't say yours is this, but suggest getting a can of DEOXIT [http://www.craig.com] or some such contact cleaner and go over every contact you can find. Be careful in getting the cards replaced correctly and without messing up a coax or wire, etc. Also don't forget all the decks of the band switch.

BTW - I sell a set of 13 Extender boards and the Digital Jumper board that were sold as a Service kit by Drake years ago. If interested contact me directly.

Good luck with a great radio.

73 Bob W7AVK

>
> -n6ojn

I've had no problems with MOST of my Yaesu stuff, having sold it on quite
soon after getting.

However I did buy a NEW Yaesu scanner about 5 years ago.

Back to dealer screwed up. NEW replacement supplied.
That went back to dealer screwed up. NEW replacement supplied.
This one sometimes throws a wobbly and needs a reset but at least it does
work (at the moment)

Never had a problem with Icom and their support here in UK is superb- email questions answered, copies of manuals supplied FREE for second hand equipment (when its not on their site). Can't fault 'em.

OK then, Since we all want to be proficient, how about this:

Step 1: No more automatic renewals. Individuals must retest and pass all elements required for their license class.

Step 2: The passing score for written exams needs to be raised to 85%.

Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Step 4: Make the no-code license one year non-renewable.

3152. Why does slow code hate the ARS I asuume it is becuase one of his other names is hey stupid

since this wold kill the ars within a single renwal cycle

your proposal would kill off the ARS n 10 years or less

why do you hate the ARS SC

The tip of the charger plug should be positive.

As for whether your charger will work with NiCd or NiMh batteries, the
answer is maybe.
A quick google found me this page with some info.

I have a friend who has a Yaesu FT-8800R transceiver That transmits a "beep" each time he transmits. We could probably figure out how to turn it off if we knew what the function is called...

A full reset will clear the condition but it also clears all the other programming. Once again, if we knew what the "feature" was called we could probably figure out how it gets turned on unintentionally.

Thanks, but Menu 5 is an audible beep when a key board key is pressed.
The tone that happens with this problem is heard at the transmitter
and the receiver.

<snip>

I had the same thing. I can't remember what the function was called but it took me a few hours to find out what it was trough experimentation.

Press the right hand volume control down briefly disables it.

I really hate the controls for this radio. They add stupid functions like this to the front panel but leave important things like memory skip deep in the menus.

This is probably the Yaesu WIRES (internet-connection) feature. It's
enabled by pressing the lefthand VOL knob briefly. When enabled, the
text INT ON appears in the display for a couple of seconds, an "int"
icon appears in the display (memory-channel field of the subband part
of the display), and a DTMF tone is sent at the beginning of each
transmission.

To disable it, press the lefthand VOL knob again, and confirm that the
"int" icon disappears from the display.

Ok, then it HAS to be that you have the WIRES activated. Every time you key up,
it sends a tone code to initiate the WIRES link...

I am sure you guys have solved the problem. I will talk with Bill
later today. This "feature" has just about driven him off his recent
return to Ham Radio!

While we have found the experience a bit humbling, I do think they
could have done better job with the manual. A search on "wires" of
the PDF manual got me on the right pages.

Thanks to all!

Not a dumb question, but sure as hell a DUMB feature
Tis Wires beep necessary when using WIRES (Wide-Coverage Internet Repeater Enhancement System).
To disable, press the volume control on the lower left of the rig. See page 52 of the manual
http://www.yaesu.com/

We had a demo station at the San Diego Fair that beeped every time they transmitted
Almost every time a repeater cop just had to tell them - ya gotta beep on your signal

Using the on-line manual - took two hours to figure out how to disable it

And if you think that is dumb -- wait until someone uses the ARTS feature on your repeater
ARTSTM: Auto Range Transponder System .... page 46

--
CL -- I doubt, therefore I might be !

The claim was "more proficient", not "generally nicer and better able
to get along with people". There will always be idiots in <insert any
field> but a ham who can't copy code at 1 wpm isn't more proficient
(or as proficient) at communicating under any and all conditions as
one who can.

Someone who can do something is, by definition, more proficient at
doing it than someone who can't. Requiring code tests and real
technical testing (the current tests are a joke) makes sure that most
of the people who get licensed are more proficient at receiving code
and with technical matters.

no it does not

most of the people that get license tody never take a code test

therfore they are not made more profeincent at Morse code even

you "facts" are well... fucked

No, it's your ability to understand the difference between "are
licensed" and "get licensed" that is.

Al, someone who passes a code test should be more proficient in code
than someone who cannot pass the code test. That simply makes that
person proficient in code, not necessarily a more proficient operator.

You may be able to use the code, but if you cannot use modern digital
methods, use sat communication, able to handle emergency communication,
able to set up digital networks and use them effectively, build modern
solid-state equipment, etc., then you are not a more proficient amateur
operator, you just are more proficient in code and that is not going to
help us much in the 21st Century.

As I said before, PSK31 can be copied when the human ear cannot even
hear the signal, if you cannot hear code, you cannot copy it period. So
code is no longer the be-all-end-all. Modern 21st communication methods
have replaced it.

If we are going to attract new people to the service, we need to get
into the 21st Century and get the old farts away from the old code and
tubes crap.

Setting up digital networks may not be particularly practical in the early days right after a large scale disaster. Satellite passes are short and if you don't have internet access to look up pass times, you may be up the proverbial creek without the proverbial paddle if you rely too much on that form of communications. Even with the pass info, the passes are too short to be useful for handling very much emergency communication.

> As I said before, PSK31 can be copied when the human ear cannot even hear
> the signal, if you cannot hear code, you cannot copy it period. So code

Yes it is true that PSK31 can be copied when you cannot hear it. However, it is useless when there are ionospheric disturbances that cause phase shifts (solar flares with the attendent aurora come to mind). This happens on a fairly regular basis. In addition, although the signal you are putting out is low power, PSK31 has a fairly high power consumption requirement since a computer is essential in the system. If you have limited power resources, it may not be a wise choice.

While code is not the end-all and be-all, it still has its place in list of communications methods. Let us go back to the auroral activity. The various digital modes fail first. Voice holds up a little bit longer getting distorted but sometimes still copyable. Code holds up a bit longer, being still copyable when voice becomes too distorted. Under auroral

conditions, both voice and code fare better than digital.

Every single method has a valid place in the list of communications methods. Every mode has its strong points and its weak points. In my opinion, hams should be able to use as many modes as possible and that includes code.

The major drawback to code is that it requires people to develop a skill rather than being a matter of just slapping parts together. Heck, I don't any skill in soldering as I've soldered only about 4 items in my life but I built both myself and my OM PSK31 interfaces in about 1/2 hour each. They were two of those four items.

> If we are going to attract new people to the service, we need to get into

>

I find that it is the "old farts" who are doing most of the exotic activities. When I work PSK31, I come across many seniors working this mode with the latest radios and computers. When I work VHF/UHF contests and look up the call signs afterwards, it is mostly the experience hams that I run across.

You have let your disdain for the code blind you to its merits. As I stated above, EVERY mode has its strengths and weaknesses and its place in wireless communications.

Dee, N8UZE

Dee, the issue is that many old hams know CW, but cannot operate most new digital modes. But if I understand what you are saying, if a 20 WPM Extra Class ham only operates CW and maybe SSB is less proficient than a 5 WPM Technician that operates on 10 different digital modes. See the 10 modes is more than CW and SSB, that ham is more proficient. Then I guess I agree with you.

Your comments on setting up networks, sat communication, and digital modes show that you have little knowledge on either. For instance, it depends on the sat orbit how long it is useful.

If PSK cannot be used due to ionospheric disturbances, well then either can CW. Computers can be operated on battery or generator. You are going to need something to power the radio right? Does not take much more for a laptop and with digital modes, the power can be much less so there is more power for the laptop.

Your comparison of voice, digital modes and CW shows you have little knowledge of what you are talking about. I have personally used digital modes when voice and CW were not able to be copied.

Finally, I happen to like CW a lot. But I don't think it makes anyone a better operator for knowing it, you should not be tested on it anymore than any other mode. Yes, there are a lot of seniors using digital, but there are too many more hanging on to the old crap CW only and tubes.

The original claim wasn't that it makes him more proficient in
everything, just that it makes him a more proficient operator. Being
equal in everything else, but more proficient in code, makes one more
proficient.

Is logic a lost art?

>You may be able to use the code, but if you cannot use modern digital

And, if there's effectively no testing, which is the current case, how
do you propose that we get operators who CAN "use modern digital
methods, use sat communication, able to handle emergency communication
...", etc? Wishing makes it so?

>As I said before, PSK31 can be copied when the human ear cannot even
>hear the signal, if you cannot hear code, you cannot copy it period.

CW can be copied below the noise. Whether it can be copied as far
below the noise as PSK31 can is a good question. With the amount of
experience I have with both modes, I think I can safely say that CW
can be copied further into the noise than PSK31 can. (You need SOME
detectable original signal for PSK31 to work - after all, you have to
be able to detect the phase shift. CW can be copied even if it's
nothing more than modulated noise. And, if there are any old sounder
operators left, even key clicks can be copied.)

> So code is no longer the be-all-end-all. Modern 21st communication methods
>have replaced it.

It never was all there is, but let's see you use "modern 21st
communication methods" in an emergency situation when all you have is
a source of RF - nothing to modulate it with. Going to yell at the
oscillator and hope it's microphonic enough to produce some NBFM?

>If we are going to attract new people to the service, we need to get
>into the 21st Century and get the old farts away from the old code and
>tubes crap.

They said that in the 50s too - "we have modern communications like
SSB - who needs CW?" ... yet CW still lives. I doubt it'll be a
requirement in 100 years , but I also doubt that no one will be able
to copy it.

Thanks for the memories. I enjoyed "the barrel" in the late '50s. No
one who works voice on aurora will ever forget what it sounds like. Or
forget working half-way across the country with 5 watts on 6 with a TV
antenna.

>The major drawback to code is that it requires people to develop a skill
>rather than being a matter of just slapping parts together.

The problem is that a lot of people think that all the "skill"
operating takes is being able to turn the equipment on. Even using an
appliance rig, it's easy to tell the appliance operators from those
who have developed some skill.

And many of us know CW, originated some digital modes (you think
teen-agers invented everything?) and can certainly operate most, if
not all, of them. We had working RTTY (that's digital) regenerating
repeaters (thanks, Norm) before most current hams were even born.

>If PSK cannot be used due to ionospheric disturbances, well then either

Not true - the human brain is a more efficient detector than a
computer sound card in some cases.

>Computers can be operated on battery or generator. You are
>going to need something to power the radio right? Does not take much
>more for a laptop and with digital modes, the power can be much less so
>there is more power for the laptop.

You can get a CW signal to anywhere in the world with a 9 volt battery
for a few hours. You can't run a pocket PC on that kind of power.

>Your comparison of voice, digital modes and CW shows you have little
>knowledge of what you are talking about. I have personally used digital
>modes when voice and CW were not able to be copied.

And I have personally used CW when digital modes weren't even
detectable, let alone copyable. So have many people who have used CW
for extremely low signal work. Try decoding a PSK signal that's been
bounced off an aurora. (The phase is constantly rolling - there's
nothing for the detector to detect.) Aurora CW sounds weird (okay, it
makes "weird" boring), but it's easy to copy.

>Finally, I happen to like CW a lot. But I don't think it makes anyone a
>better operator for knowing it, you should not be tested on it anymore

Okay - the same then. You're tested on your ability to understand
English, and to read the written word - that covers voice and digital.
Let's test for CW. Not "more", just "same".

> Yes, there are a lot of seniors using digital, but
>there are too many more hanging on to the old crap CW only and tubes.

And too many youngsters who think that it it's old it's automatically
crap.

I still hold to the belief, claim, whatever that knowing CW in itself, does not make an operator more proficient in anything but CW. I would even submit that some operators who only use CW are less proficient operators than a modern ham who uses many more modes and methods, including modern digital modes, to communicate. Follow the logic Al. Someone who is versed in more facets of Amateur Radio than simply CW is a more proficient operator. Yes, I guess you are correct, logic is a lost art.

> methods, use sat communication, able to handle emergency communication
> ...", etc? Wishing makes it so?

No, desire does. Every amateur has their niche that they want to pursue. Forcing a CW test on someone does not make them have a desire to use it. In fact, forcing someone to test on an archaic mode of communication may in fact keep them away from the service and therefore they will never develop an interest in learning and using modern communication methods.

Al, you seem to have trouble reading. I never mentioned copying below
the noise level. What I said was CW cannot be copied if the human ear
cannot hear it. I have copied PSK when the audio of the signal could
not be copied by the human ear. It's just that simple. All the BS
about CW being the only true weak signal mode is well just BS. There
are superior modes to CW and PSK is one of them.

Yup, if all you have is a source of RF and nothing else, I guess you are
screwed. But that is not reality. You would have a real problem if you
did not have a source of RF, gee Al, let's call it a transmitter and use
big people words. I wonder why NASA does not have CW capability on the
Shuttle and Space Station - you know, just in case. Why have our armed
forces stopped using it? What happens in war if all they have is a
transmitter? Get real.

Yup CW still lives and it will go on for quite awhile. Forcing people
to learn and use it is not the way to keep it going. It probably won't
be a requirement in 5 to 10 years. I guess that is just evolution. Out
with the old and in with the new.

Next you'll tell us that the sun rises in the East. Thank you,
Captain Obvious.

Knowledge of any single thing doesn't make an operator more proficient
in anything but that one thing. Should we have testing in TV
techniques, simply because it's a "modern communications mode"? How
about microwaves? Programming? Hey, there's one I'd go for. Let's
be "modern" and make sure that hams can program the computers they're
using for "communications".

> I would even submit that some operators who only use CW are less proficient
>operators than a modern ham who uses many more modes and methods,
>including modern digital modes, to communicate. Follow the logic Al.
>Someone who is versed in more facets of Amateur Radio than simply CW is

Someone who is versed in more facets of amateur radio than simply
modern digital modes is also a more proficient operator. Can YOU set
up an internet audio stream without following a set of instructions?

> Yes, I guess you are correct, logic is a lost art.

And you proved it again.

>>Wishing makes it so?

>No, desire does.

A distinction without a difference.

>Every amateur has their niche that they want to
>pursue. Forcing a CW test on someone does not make them have a desire to
>use it.

Neither does forcing them to take a test in "modern digital modes".

>In fact, forcing someone to test on an archaic mode of
>communication may in fact keep them away from the service and therefore
>they will never develop an interest in learning and using modern
>communication methods.

And forcing someone to test on a "modern digital mode" may in fact
keep them away from the service and therefore they will never develop
an interest in learning and using CW.

>Al, you seem to have trouble reading. I never mentioned copying below
>the noise level. What I said was CW cannot be copied if the human ear
>cannot hear it.

And I said it can, so who has the problem?

>I have copied PSK when the audio of the signal could not be copied by the human ear.

And I have copied CW when there wasn't enough signal for a computer to
copy PSK.

>It's just that simple.

It sure is.

>All the BS about CW being the only true weak signal mode is well just BS. There
>are superior modes to CW and PSK is one of them.

No one said that CW is the only weak signal mode, but it can sometimes
be copied when it's weaker than any other mode can be copied. If the
noise frequency is higher than the bit frequency ... well, you know
weak signal analysis, right? Or you wouldn't be discussing it, would
you?

Oh, but CW takes MUCH less power for the same path than any digital
mode, and CW is the ONLY mode you can use when the only thing you have
is a source of RF.

>Yup, if all you have is a source of RF and nothing else, I guess you are
>screwed. But that is not reality.

Until you have a radio with a broken voice or data circuit and the
only thing standing between you and safety is your inability to
communicate because the radio's broken.

>You would have a real problem if you
>did not have a source of RF, gee Al, let's call it a transmitter and use
>big people words. I wonder why NASA does not have CW capability on the
>Shuttle and Space Station

Excuse me? They sure do.

>Why have our armed forces stopped using it? What happens in war if
>all they have is a transmitter? Get real.

You're comparing military intelligence to actual intelligence? They die. Soldiers have been known to do that in combat. The prime mission of the military in wartime is NOT saving the lives of individual soldiers, it's winning wars at the COST of the lives of individual soldiers. Why don't YOU "get real"?

>Yup CW still lives and it will go on for quite awhile. Forcing people
>to learn and use it is not the way to keep it going.

Neither is forcing them to learn electronics. Or the laws they're going to have to know. Let's just post ham licenses in stores and people can pick them up if they like. Just like they used to do with CB licenses. Why keep anyone from having access to a public property? Just let anyone buy a radio (no knowledge of how to even build a kit should be required) and use it. Those of us who want to learn something can petition for a new service that requires actual knowledge of something.

you are the one that failed the class

I did not

CW currently stands as more imprtant than the rest of HAMradio combined
for HF access

CW is not anyway near that valuble

therefore the current testing system is ilgoical

BTW to answer your red herring from another thread No one is proposing
adding a test on digital mode

I am a new ham and will respond to this based on being new. I got my license last year at age 48 so I'm neither a kid nor a senior. I've been tested and scored at 136 so I'm not a genius but am far from a dummy. I mention these things to give a general picture of who I am and where my position comes from.

Radio Buff wrote:
>
> No more automatic renewals. Individuals must retest and pass all elements
> required for their license class.

Although I see the reasoning behind this request I disagree. There are older hams who wouldn't be able to pass their license class test but who still enjoy participating in their nets and talking to their circle of ham friends. I don't want to be the one to take that away from a senior ham who is hurting absolutely no one by enjoying their hobby. The fact they might not pass the Extra test means nothing.

Radio Buff isn't going to want to give up enjoying radio when he/she is older and can't pass the exam either.

>
> The passing score for written exams needs to be raised to 85%.

I have no problem with this provided the exam is similar. If you want to raise the minimum score required while also increasing the difficulty level of the exam by 20-25% the combination will make it too difficult for many. You will kill amateur radio because there will be far fewer coming into the hobby than going SK.

>
> Code elements should be 13 wpm for General, and 20 wpm for Extra.

Code should not be a part of the license test anymore than PSK or any other operating mode. There are so many different ways to enjoy and utilize amateur radio today that were not available decades ago that make code no longer a necessity. Mandating code skills is now similar to mandating slide rule skills for an engineer. It is an excellent tool and anyone capable of using it has a true skill. That said, there is nothing that can't be done by one without slide rule skills. They may be at a disadvantage at certain times and in certain specific locations and scenarios but for the most part the individual with the slide rule skills has no true advantage today as they did a few decades ago. The same holds true with code.

I do believe there should be a segment of the bands each license class is authorized that is reserved for those with code in their license. It just shouldn't be a requirement any longer. It keeps otherwise intelligent and capable people away from the hobby and the goal should be to bring them in not keep them away.

>
> Make the no-code license one year non-renewable.

This point is pointless with the sensible approach outlined above.

Yes it does mean something. It means they're appliance operators. They
pass their exams once then forget everything and don't want to advance
themselves anymore or be proficient hams. They're not an asset to the
service, they're just lazy asses with licenses and only want to operate
appliances.

> Radio Buff isn't going to want to give up enjoying radio when he/she is
> older and can't pass the exam either.

If I can't pass the tests, I don't deserve a license, or renewel. I don't
get to operate if I can't qualify. It's that simple. You people think
that if someone can't pass a test, they should get the license anyway.
It's a government handout just like how you get your welfare checks and
food stamps in the mail at your project housing. Your Democrat party
outcome based thinking is what is distroying Amateur radio and America.
Everyone is equal and if you want to excel and improve yourself there is
something wrong with you because your not supposed to want to do that.

>>
>> The passing score for written exams needs to be raised to 85%.

Quality or quantity? You people that want things easy always say
requiring more qualified licensees will kill the service. You're against
quality because it require you have to work a little. Well, If you ever
need radio help in an emergency to save lives & property, and the ham
operator you talk to on the other end is an incompetant retard, I'll bet
you'd wished for quality then.

Yah, we can't require quality or skill for a license. I know you're right.
We gotta be like CB'ers.

> I do believe there should be a segment of the bands each license class

Code isn't a requirement, you can always talk on CB, FRS, and cell phones
all you want.

>>
>> Make the no-code license one year non-renewable.
>
> This point is pointless with the sensible approach outlined above.

No, it's not pointless. It insures licenses will improve and will be
valuable to the service. I know you would hate that because in another
month you would either have to upgrade or loose your ticket.

Doesn't anyone else here want to save ham radio? I'm getting tired of
arguing with the lazy asses. I hope some of you cared and want to help me
save ham radio enough that you emailed this to President Bush, your
Senators and Congressmen to press the FCC does the right thing for us:

No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

The passing score for written exams needs to be raised to 85%.

Code elements should be 13 wpm for General, and 20 wpm for Extra.

Make the no-code license one year non-renewable.

73, Thanks for your support.

Markie,

I'm not throwing you off the bands. You're throwing yourself off. You
have to pass a test for the privileges. If you can't pass the test like
Techs used to have to pass, you get no privileges to operate and have to
go back to CB with everyone else that can't pass a test and acts retarded.
You earn privileges, licenses aren't totally free handouts from the FCC
yet, as much as you people wish they were. No one is throwing you off the
bands. You being a lazy ass that can't spell and don't want to learn gets
you thrown off the bands. The no-code license was a bad idea to begin
with anyway. You couldn't have got licensed under the old system. You
and Sal M. Onella would still be talking yourselves on CB and pissing off
truck drivers.

sc

> yet, as much as you people wish they were.
I already earned those prevlidges you want to propose that they be
revoked for no valid reason

fortunately the FCC will NEVER go for it
> No one is throwing you off the
> bands. You being a lazy ass that can't spell and don't want to learn gets
> you thrown off the bands.
now you are just lying
> The no-code license was a bad idea to begin

perhaps it was (I don't agree it was but I will grant it might be)
but it is 20 years too late for that discussion
>You couldn't have got licensed under the old system.
Acualy I could have gotten one

by simply accepting the offer of those testing to lie and say that I
tooked the recieve I passed one and tranmtiing test I took a month
later and passed (while failig n that day) and claim they taken and
passed the same day

I certainly could gotten a license I was merely too honest
>You

> and Sal M. Onella would still be talking yourselves on CB and pissing off
> truck drivers.
I still use CB when it serves my needs as I also use mMURS and FRS when
they suit

but you clearly hate what the ARS is

and you would enact a sytem that would kill they ARS as it is if you
had the power

that makes you one real sicko
>

> all you want.
indeed code WILL not be a requirement verysoon

deal with it
>
> >>
> >> Make the no-code license one year non-renewable.
> >
> > This point is pointless with the sensible approach outlined above.
>
> No, it's not pointless.
you got that right the point is that you want to kill the ARS becuase
it has eveoled
> It insures licenses will improve and will be
> valuable to the service.
nope
> I know you would hate that because in another
> month you would either have to upgrade or loose your ticket.
nope

I do hate the ioidea of yet again taking prevdeges away form operators
that Have earned them I think een the ARRL and FCC learned that lesson
year ago
>
> Doesn't anyone else here want to save ham radio?
Sure I want to save it

you don't
> I'm getting tired of
> arguing with the lazy asses.
then do your self a kindness and stop you are not helping the ARS
except for contuiing to prod the No Coders into pushing the FCC to stop
the bleeding your kind hae created
> I hope some of you cared and want to help me
> save ham radio enough that you emailed this to President Bush, your
> Senators and Congressmen to press the FCC does the right thing for us:
Indeed I did email your thought to a freind on the white house staff

I reported on the laughter that rsulted
>
> No more automatic renewals. Individuals must retest and
> pass all elements required for their license class.
not bad but not likely since it will rsult in prevledges being taken
away from those that EARNED them
>
> The passing score for written exams needs to be raised to 85%.
if you like
>
> Code elements should be 13 wpm for General, and 20 wpm for Extra.

suicide for the service and will never be enacted by the FCC they have
ejuected anything that takes prevedlges awayfrom people
>
> Make the no-code license one year non-renewable.
and the final

throwing half of the ops currently licensed would insure the loos of
most if not all of our spectrum

is it just that simple

True, but the ones that use the dynamic encryption can do a reasonably
good job along with a firewall and router. The golden rule is
"Nothing is bullet proof"

One of the locals mentioned doing a bit of "war driving" around town
just for curiosity. About 80 to 90% of the networks heard were
unencrypted AND over half of those _still_used_
the_default_name_and_PW.
I use hard wired Cat5e in a gigabit network as with the amount of
traffic wireless is just too slow even if it is full duplex.

NOTE I only receive the two amateur radio news groups.

Not even in the same universe -- WEP is easily cracked in minutes,
little more than the Emperor's new clothes. Use WPA with a strong
passphrase for any real security.

One day I'm on the interstate... snowing real bad. Call out on the usual simplex channels on VHF/UHF to get a traffic/conditions report... no answer. So I grab the "emergency" CB radio I keep under the seat. Call out on Ch 19... got _many_ responses - mostly truckers all with solid info. Very useful - and enjoyed listening to them all help each other.

That day, ham radio lost and CB won.

If you're traveling a long distance and don't want to hear the usual CB chatter - 2 meters and so on is great. For Road reports - I agree - CB IS the answer - hands down. I'd never give mine up..... I installed one in my truck just for that reason. BOTH services have their advantages and disadvantages. I don't think anyone is saying Ham is the "gift from god" when it comes to radio. Even FRS has its place. It all depends on the need and so on.

That's not passing, that's cheating. If you're old enough to go to
school you're old enough to know the difference.

>but you clearly hate what the ARS is

If he hated it he wouldn't care what it's become. He cares because he
DOESN'T hate it.

>and you would enact a sytem that would kill they ARS as it is if you
>had the power

There were plenty of hams when 13 wpm was the entry level. A 5 wpm code test and a *real* written test wouldn't kill it, it would just separate those who are willing to do what it takes to be hams from those who just want the license without the work.

I think that's one of the problems here. CW isn't just an operating
mode - it's a language, and the test already includes one language, so
testing for knowledge of a language isn't anything new.

There's NEVER been a test of CW operating mode, technique or ability -
just proficiency with the language of International Morse. Since one
must demonstrate proficiency with another language (English) to obtain
a license, it's a matter of degree, not a matter of kind.

He's right, though. Anyone who ever heard K2SUC out of Nutley, NJ,
would agree. The repeater wars of the 60s and 70s. The 146.715
repeater on Long Island in the early 70s.

We've had our share of pre-VEC idiots. But it was never as bad as
even some of the things you hear on 75 these days. I rarely plug a
mic in.

no such requirement exists indeed if you can read then the question and
answers are suposed to read to you and your aswers taken down

no requirement to understand english exists in order to be licensed

maybe nut the current entry rates sugest otherwise and He does not
propose 5wpm and writeen test he prososes 13 wpm and a total lack of an
effective entry class and elimiating half the current licees and likely
a lot more than that

and any "paln" that involves dumping 300,000 hams right of the bat is
pretty going to finish off the ARS

There's a difference between earning and being able to get with no
effort.

>> >> The no-code license was a bad idea to begin

That you have an opinion doesn't make the opinion something that
should be government policy. Who do you think you are, Bush? (Oh,
forget that - his opinion isn't worth as much as yours.)

>but in any case the FCC will never take my prevledges thay have made
>that clear

Right - the government NEVER changes anything. Are you really that
naive?

> accordingly you need to learn to deal with what is instaned
>of trying to overturn history

I have nothing to deal with - I'm licensed, and could keep my license
if they made 20 wpm, or digital mode testing, a yearly requirement.
The biggest problem would be freeing up a day to get to wherever the
test was being given.

>> >Acualy I could have gotten one

>> It was you who said, "I having never been able to passa code test", so
>> you couldn't have.

>you spoke too soon

No, you could have stolen a license - you couldn't have been licensed.
There's a difference. Robbing a bank isn't earning a salary.

>> That's not passing, that's cheating. If you're old enough to go to
>> school you're old enough to know the difference.

>so it is cheating it still is obtaining a license

That's about what it's come to these days, isn't it? We can't hurt
people's feelings by telling them that they're just not qualified to
do what they want to do. The kid fails all his tests and never turns
in homework? Hey, he's still a high school graduate. Let his boss
suffer.

For many years, my CCNY degree was worthless, because anyone could get
one. Whether they could pass the tests, or not even sign their name,
mad no difference. That little escapade has changed. Maybe some day
a ham ticket will mean something again too. Right now all it means is
that you took the time to apply for it.

>> >but you clearly hate what the ARS is

>> If he hated it he wouldn't care what it's become.

>he hates the ARS today his manner makes that plain

>>He cares because he
>> DOESN'T hate it.

>> those who just want the license without the work.

>maybe nut the current entry rates sugest otherwise

Correlation isn't cause. Who needs ham radio with cell phones and the
internet? (I spent a lot of my ham effort maintaining an HT so that I
had communications when I was out and about. A cell phone's so much
easier.)

> and He does not
>propose 5wpm and writeen test he prososes 13 wpm and a total lack of an

Oh, you mean the way it used to be, when there were plenty of hams.

>and any "paln" that involves dumping 300,000 hams right of the bat is
>pretty going to finish off the ARS

Seems to me we had a pretty good ARS when we only has 100,000 hams. If dumping 300,000 means losing half, it means having 3 times the number we used to have. How is tripling "finishing off"?

Languageless? You MUST demonstrate proficiency in at least ONE
language to get a license, even today. A code test is demonstrating
proficiency in two languages - not a major step.

becuase it would be halfing not triplling and to assume it is only
halfing is generous many of the current generald and extra would be
weed out withon 10 years
if ham radio looks like it it is dying we will loose oour bands to
anyone that wants em indded a likely result would losing many of ou r
hf bands bands to literaly an extpanded CB service our vhf and up
would be savaged

and we would be powerless to resist

my opinion yes but also a fact Morse code is no more a language than
Crillic is

it is simply an alphabet

you can exchange a limited amount of info using the stand codes but you
can say "do you walk or run by the sea" in morse to any one that does
not speak or read english first

you are simply spreading ignorance al
>
> >no such requirement exists indeed if you can read then the question and
> >answers are suposed to read to you and your aswers taken down
>
> Languageless?
yes indeed although it easier if you do understand english not required

not suree if you can take the test in spanish (or other ;lang)right
off but if not now soon I expect it will be possible
> You MUST demonstrate proficiency in at least ONE
> language to get a license, even today.

nope no such requirement exists not for techs not generals and not
extras either

indeed you point out the way you can get a license without demtating
skill with english if you simply memroize all the questions and answers
their remains no requirement that you understand the content, that task
is easier if you know english but not a requirement

where is this requirement for lang skill in part 97?

> A code test is demonstrating
> proficiency in two languages - not a major step.

expect you are never required to demostrate profiicentcy in any
language at all
and if you were 2 languages would twice one and Code is NOT a langauage

just an alphabet

Indeeded the ignorance of Hams that spread such tales have been one of the tools the No Code movement has been using against you

Al,
with all due respect to you as a fellow ham I strongly disagree with your position. I got my ticket the so called "right" way. I've held an advanced (WA4***) class since I had to drive to the nearest office for for the written and cw.
Remember when the dam questions weren't even allowed to be published?
Remember those stupid ass ARRL study manuals?Al,how was that better?
Remember when the Dick Bash system came along? As I remember new hams would mail Dick the questions they remembered and a crude study manual slowly developed into a pretty accurate (for the time) guide.
Then guys started passing using the system. The "real" hams figured the guys who used the Dick Bash system weren't real hams "like them". Because they passed the "right" way and the new guys were, well, you know, what you say about the techs now.

Computer crashed, had to replace hard drive.

My BC898T and ARC898 Software had to be reinstalled. No longer
have the passwords. Uniden & Butel (who I purchased the software from)
will not give me the passwords that I already paid for - to reinstall
the software.

Would greatly appreciate the passwords for these programs

Thank you

==========
You probably mean 'shame on the users' who haven't got a clue.

By the way it is the same situation here in the north of Scotland .
Driving in Inverness you can freely access WiFi points allover town
,from commercial companies to hotels.....but not at locations where
you would expect it ....like 'Starbuck' and bookshops like 'Borders'
Also in California you have to pay for WiFi access at
Starbuck.....must constitute a increasing part of their
income,considering the number of people with laptops.....usually without
a coffee..

I know ,I know ...life isn't a freebee

This will go on until the Scotish police start doing what the English do. They track traffic at the ISP level looking for "kidde porn". Once they find it, they locate the person sending or receiving the files.

They have no trouble getting a warrant and come in and arrest the owner of the account and confiscate their equipment.

As soon as they do this, "users" will go looking for unencrypted networks and use them, if they don't know I don't know Scotish law, but in most places the owner of the network is responsible for what is done with it.

There was a case in Canada of a man found driving five miles per hour in a residential neighborhood. When the police stopped him, his pants were around his ankles and there was a laptop on his lap.

Canada unlike most places has a law prohibiting using other people's internet connections without permission. Most places don't.

Geoff.

No Al, CW is a mode not a language. Are you seriously this ignorant?
Just about any language on the planet can use the mode CW which makes it
not a language.

You people that keep trying to make CW something it's not amaze me.
It's not a god, it's just a old mode.

I think you have to refer to people like Al as "Code Nazis" as they want
to force it on everyone, they try to make it into something it is not,
they think code is a cure for what ails the amateur service, and the
only way to salvation is through the code. Anyone who is not on the
code bandwagon is unfit for the amateur service and needs to be eliminated.

"All hail the code!" - NOT!

Yes, I know your opinion. That still makes it just your opinion.

>it is simply an alphabet

No more than ASL is "just an alphabet". (BTW, those who actually
study the subject consider both Morse and ASL to be languages.)

>you can exchange a limited amount of info using the stand codes but you
>can say "do you walk or run by the sea" in morse to any one that does
>not speak or read english first

Neither can you communicate with someone in ASL if they don't
understand English. So? That still doesn't stop ASL from being a
language.

>you are simply spreading ignorance al

That you don't know something doesn't make it the ignorance of others.

>> >no such requirement exists indeed if you can read then the question and
>> >answers are suposed to read to you and your aswers taken down

>> Languageless?

>yes indeed although it easier if you do understand english not required

So if you don't understand English you can still answer English
questions. Interesting.

>not suree if you can take the test in spanish

I'm sure - you can. But one thing's for sure - it has to be in SOME
language.

>> You MUST demonstrate proficiency in at least ONE
>> language to get a license, even today.

>nope no such requirement exists not for techs not generals and not
>extras either

Stop arguing and start thinking. Your claim - that one doesn't have
to know any language to pass the test - is nonsense.

>indeed you point out the way you can get a license without demtating
>skill with english if you simply memroize all the questions and answers

In what language?

>their remains no requirement that you understand the content, that task
>is easier if you know english but not a requirement

You can understand the content if you don't understand any language?
How?

>where is this requirement for lang skill in part 97?

Part 97 itself.

>> A code test is demonstrating
>> proficiency in two languages - not a major step.

>expect you are never required to demostrate profiicentcy in any
>language at all

Which you are. You're just arguing, not thinking.

>and if you were 2 languages would twice one and Code is NOT a langauage
>just an alphabet

Again, your opinion, not the opinion of language experts.

>Indeeded the ignorance of Hams that spread such tales have been one of
>the tools the No Code movement has been using against you

The reason the FCC is dropping the code requirement has absolutely
nothing to do with any "movement" or any lame argument like "you don't
have to understand any language to pass the test".

Any language can be signed - but ASL is a recognized (by the experts)
language. Which nullifies that argument.

3235. Trucker/hams: Our museum needs your help !

Calling all trucker/hams:

The Vintage Flying Museum needs your help!

A generous ham has agreed to donate a complete BC-375-E radio transmitter setup to the Museum, which we plan to install in our B-17G Flying Fortress, 44-8543A, N3701G, "Chuckie". Unfortunately, the equipment is located in Mansfield, Massachusetts, and the Museum is located in Fort Worth, Texas! We are looking for someone in the transportation business who would be willing to donate their services and transport the equipment for us. The load would be on one standard shipping pallet, stacked about 4' high, with a weight of probably 200 pounds or so. The donor is under a deadline to move the radios out because his job is transferring him overseas later this summer. We are a 501(c)(3) tax-exempt organization, so we can provide a tax receipt for the value of your donated services.

If you can help, or you know of someone who can, please contact me directly via email > > > k5dh@qsl.net

Thanks and 73,

Dean Hemphill, K5DH
Volunteer B-17 Crew Member
Vintage Flying Museum

CW is not a language, it is a mode. I think what is being confused here is Morse code, and in particular much of the Morse shorthand used in the CW mode (and, for that matter, in much of phone mode as well). Those ARE a language of sorts.

>> I have nothing to deal with - I'm licensed, and could keep my license
>> if they made 20 wpm, or digital mode testing, a yearly requirement.

>yes you wold have to deal with thresult of ruining the ARS

No, I really don't care that my license really means nothing these
days, and will mean even less in the future. I can operate on those
frequencies, and those modes, that I want to use, and talk to those
people I want to talk to. Whether new hams need CW or not.

>> The biggest problem would be freeing up a day to get to wherever the
>> test was being given.

>and having any freqs left to operate on

That has nothing to do with CW - that's set by international
agreement. Do you really think that if we had "only" 300,000 hams,
we'd lose our frequencies?

>lots of differences but at least I am in touch with the real world

Thinking that robbing a bank is earning money? Not very much touch.

>> >so it is cheating it still is obtaining a license

>> That's about what it's come to these days, isn't it?

>that offer was 30 years ago

Oh, I didn't notice. I was licensed for years by that time. I've
never been "offered" anything by the FCC.

>> It's BEEN hijacked - he's trying to get it back.

>becuase it would be halfing not triplling and to assume it is only
>halfing is generous many of the current generald and extra would be
>weed out withon 10 years

300,000 is half of 100,000? What kind of arithmetic are you using? I
can't seem to get my calculator to make it come out that way.

>if ham radio looks like it it is dying we will loose oour bands to
>anyone that wants em

Your opinion - again, the world at large doesn't really care too much
what the US does these days, as far as number of hams.

> indded a likely result would losing many of ou r
>hf bands bands to literaly an extpanded CB service our vhf and up
>would be savaged

That has nothing to do with frequency allocation. Learn how the ITU
works before you make such funny assertions.

>and we would be powerless to resist

We ARE pretty powerless to resist now - but whether we keep a CW
requirement has nothing to do with the ITU. They couldn't care less.

No, I mean shame on the wireless hardware companies, as I wrote, for
such a gross disservice to their customers -- it shouldn't be necessary
to be an IT expert to use Wi-Fi safely. It should just work properly.
Otherwise it's not ready for the market.

bullshit you realy are unamerican the No code movement has showne we
have the powerthe chnange to change interantional law and national
rules on this subject

Maxim and his crowd shown we could change mnds in officaldom after WW 1
when some folks did not want us back on the Air at all

people have power man wake and smell what you are shoveling

they are a jargon but they can comincate the rnanage of expression
twith someone that does not share with the same underlying language
that Al needing to glofiy his favortie mode chooses to over look it's
limits (and prehaps it has no limits for him and can indeed express
everything he wants to express on the air)

all that is required is getting the right answers down on the answer
sheet

how the test taker manages that (other than cheating) is up the take
of the test one of the options

understanding the lang of the question is merely one or the options the
best one for the ARS but for example MY wife did not understand some
the question on her tech test using the fact I know something of how
the test is asembled and graded she was able to fill correctly some of
the ansers by looking for a patern in the in answers of the questions
she could understand without this test taking skill (avarient of skill
taught in some corners for passing other tests) she would not be a ham
today

and yet she was able to help set up at FD this year and make some
contact and has been able to devolpe soe of the skill needd in the ARS,
enough to be complmented on her skill duiring reccent local emergency
here in the area. i was busy geting theour aux power back online and
adjusted to the loads I wanted carried and she used the radio (and
helped by reading a a few reading fromt he station back to me as I
worked on stablizing our household systems

My wife does not understand a great deal of the content of the messages
she relayed, such understanding was not required in order to be of

assitance

On her own she has slowly been feling her way into the preveldges offered by her license, amsuingly to those that know me she is developing some talnet for Morse Code and and has been making a qso's in that mode but due being still clumsy and a more than bit of test anxiety has been unable to pass a test that and the fact the tone the arrl uses gives her a headache and the ARRL will not alow another tone to used without the report of an audiologist (at a cost of about 2k) means she will wait tille the FCC acts to get an HF license like I am waiting

A rather lengthy thread contains erroneous claims on the above topics. Morse code is not a language. Language is communication of thoughts and feelings through a system of arbitrary signals, such as voice sounds, gestures, or written symbols, with such a system including its rules for combining its components, such as words. The words are the language. Morse code is the alphabet just like A, B, C ... Z are the alphabet. It is nothing more than the building blocks used to compose the words that actually are the language. English, French, Spanish, German etc. are languages. Hello, bonjou, ola, and hallo are alphabetic symbols combined to form a word meaning the same thing in the various languages. It doesn't matter if the word is written, transmitted orally or by CW, it is still just a string of characters that only becomes language based on the knowledge of the sender to combine them in the proper sequence and the recipient to translate it and receive the intended communication. Neither the alphabet nor morse code are languages.

Proficiency is having or marked by an advanced degree of competence, as in an art, vocation, profession, or branch of learning. One could extend that to include competence in an avocation or hobby. Our narrow minded and singly focused friend claims an operators ability to use code makes him more proficient. That is patently false in many cases. It is the overall competency that is the determinant. The operator with code skills may be excellent at code and know nothing of PSK, digital, satellites, EME or any number of things while another operator can expertly use any of them but doesn't know code. They may both be proficient operators, just in differing modes of operation. Then again, neither may be a proficient operator. They may barely know enough about their equipment to get it to do what they narrowly focus on doing. A third operator who perhaps doesn't know code and only knows SSB operation may be the proficient operator who knows his equipment well and can quickly and easily adjust it to perform at peak efficiency in his operating mode.

It boils down to code being nothing more than another operating mode which isn't a language and isn't a gauge of proficiency.

Right, and how do you send CW while driving your pick-up truck with the
twin talkers -and- the on the air lights mounted on the roll bar? It's bad
enuff running around with the 102" whip banging off everything low, let
alone trying to tap out some directions to your ham buddy on the highway
via CW. :)

CW rules in disasters tho..

As best I recall CW is illegal on CB. Naturally, if the average CBer
knew that, there would be a rush to learn it. :-)

Mr Bill

Rash or rust?

Reckon where Riley will rate a CW on CB bust? :)

(i think it's legal at small wattage) no?

Unless .... one is trying to communicate with another "code" station ...... I don't buy the language aspect ...in fact this discussion has been beat to death years ago ...... what is proficient ???? 5 WPM yep it is if you are working another 5 WPM station .... 40 WPM yep if the other fellow is 40 WPM "proficient" ...as stated many times before ....my "proficiency" unravels like a cheap sweater around 40 WPM or so. PS to keep this in the realm of equipment ......
how does the FT-897 act with the Collins CW filter ...worth if for and backup and field day ????

Take care all ...73 Tom Popovic KI3R

Can't you spell any better than that?

So, Al. Can you tell us how many receivers or transmitters have you built from scratch? Not from a kit, or someone else's design, but from scratch? Drew a block diagram that was converted to a real schematic one block at a time where you did all the math, laid out the chassis, cut and drilled all the holes and built the equipment all by yourself?

What is the biggest transmitter you've ever built or used? I'm a disabled now, but I worked in broadcast, and built telemetry equipment that is in use all over the world, and in orbit. Tell us, what can you do other than whine? Have you ever built a commercial TV station from scratch? Have you ever maintained a 5 MW EIRP UHF plant with a 1700 foot+ tower? Had the fun of finding parts for a transmitter that haven't been made for 15 years while managing to stay on the air?

I found CW boring years ago, and have some hearing problems so I said to hell with Morse code and got involved in the equipment design end of things. It was more fun for me to develop a design and built it, get it aligned and working, then move on to the next design.

it is legal at part 15 wattage but not at legal cb power let alone the
poser a ham staion can use it as

amsuingly I thought CW was legal on CB till Robeson disabused me of
that notion

it was interesting that he dt not realy seize upon that mmistake on my
part (a real one for a chnage as opposed tothe faults he merely
igmaines)

Better? I don't know. Who said it was?

But how many hams today could even understand a schematic, let alone
build a W2EWL rig? But how many SSB (or DSB) transmitters were
homebrew? Hams don't even build repeater controllers any longer -
everything is appliance. What's ham radio supposed to be (from the
government viewpoint) if not a training ground? For people who know
how to operate. Not for CBers on ham bands.

People are afraid of losing things if we have too few hams? Where
will the FCC's justification go (the "ham radio provides us with a
pool of experienced operators" thing) if ham radio is just CB on
different frequencies?

3 receivers, about a dozen transmitters. Oh, yes, and the automation
system of the Hong Kong Space Museum planetarium, the old Amtrak
ticket printer, some software that's in use in over 50,000
installations around the world ...

But I'm not the typical ham, I've been a design engineer for a long
time.

>What is the biggest transmitter you've ever built or used? I'm a
>disabled now, but I worked in broadcast

Never built anything over a kilowatt, but engineered some pretty hefty
ones. (Ch. 40 in Waterbury CT, WWRL, WHN, a few others.)

(You remind me of an IBM HR department of old. They always wanted to
know the largest program the applicant ever wrote. Someone
legitimately told them, back when software was a few k, that he'd
written a 3 meg program. It was a translation program with a 3 meg
dictionary. You're playing "mine is bigger than yours.")

>Tell us, what can you do other than whine? Have you ever built a commercial TV station
from
>scratch?

All by myself, no. Ever build a planetarium automation system all by
yourself from scratch (including inventing some of the technology -
which is still, after 30 years, state of the art)? But I'm not going
to get into a pissing contest with you. If you were mentally as old
as you claim your body to be you wouldn't have started one.

>I found CW boring years ago, and have some hearing problems so I said
>to hell with Morse code and got involved in the equipment design end of

Since I totally depend on 2 4 channel BTE aids, I can't receive CW
that easily any more, but that's not a good reason for the FCC to drop
the requirement. It's not even a bad reason. But when anyone can
guess well enough to pass the "technical" part of the exam, the
license isn't worth much.

I, like many hams, have gotten a lot of surplus stuff from Fair Radio Sales in Ohio.

Monday, I discovered Surplus Sales of Nebraska.

Nice people! Old school customer service. The web ordering isn't "modern". But they don't make a lot of money at this, I'm sure. So I.T. people are probably out of the question. But your order gets underway in about 48 hours.....

They told me the owner spends all day on the net trying to hunt down surplus stuff he can buy. So if you have anything, I was told to take a photo of it....and send an e-mail to him. His e-mail address is at the bottom of every web page.

Here's the website for Surplus Sales:

http://www.surplussales.com/

I believe that, at some speed, CW becomes a language. Most high speed
operators are not reading the each character. They hear the word.
They only resort to character copy on unfamilure words and names. Even
the low speed op will hear many short common words.

That sounds like a language to me.

When most adults read printed text, they don't look at each letter and sound out the word, at least for common words. Instead they see the shapes of whole words and recognize them as a unit.

This does not mean that "written English" is a distinct language from "spoken English".

CW is a modulation type. It is interesting in that it is the only form of digital modulation which can be encoded and decoded by an unassisted human in real-time. It is also interesting for a variety of other reasons, such as historical importance, widespread adoption, simplicity of equipment and readability in high-noise, weak-signal environments.

> That sounds like a language to me.

When abbreviations, prosigns and Q-codes are heavily used, one could perhaps make an argument for calling the entire system a dialect or pidgin. It is not a language in and of itself. There are very few thoughts you can express in CW alone, without using a real language (English or Esperanto or whatever) on top of it.

Although good code operators don't individually recognize each separate character, code is still not a language. It is a character based system that allows communication. The combining and ordering of characters, whether written letters of the alphabet on paper or tone representation in code, produce communication in whatever language the operator uses. The words in this sentence are English language. Someone with knowledge of German or Tagalo can take the letters and create a sentence in that language. The same can be done with code. The letters and code are not and never will be that language or any other language no matter what speed is achieved.

The old rotary telephones were "Digital Modulation" in that they
opened the line to control the Stowager stepper relays, or crossbar
switching eguipment. If you were good at it you could dial numbers with
the hook switch.

LOL!

I laugh when you lazy asses whine CW is keeping you from modernizing.

The code requirement isn't stopping anyone from modernizing. Hams don't want to modernize and won't modernize unless they're forced to modernize. That's what's stopping the modernization.

How does having a CW requirement prevent you from hooking a computer to a rig? It don't. You don't want to modernize because you're stupid or lazy. Just like you don't want to learn CW because you're stupid or lazy.

Interesting that you mentioned that. I hadn't thought about it in
decades but as a kid I used to dial by tapping the switch hook all the
time. That wasn't a language either but it did involve equipment.

For more information, pictures or to place a bid on any item below go to:

http://search.ebay.com/_W0QQsassZtcbordpQQhtZ-1

Tandy Model 100 24KB Portable Computer / Disk Drive 2 / Barcode Wand /
Software / Extras

This is an old but reliable Tandy Model 100 portable computer, one of the
very first notebook computers. Everything tested and works but the tapes
with the software are old so hopefully they won't cause any issues. I will
include many tapes of both commercial and other software as well as
several disks for the disk drive. Also have one original and two copies of
the disk drive system disk. Even includes the very rare little white legs
that prop it up at a comfortable viewing angle.

* Tandy Model 100 24KB Portable Computer
* Original Slip Case
* Original Prop Legs
* Quick Reference Guide
* Original Manual
* Disk Drive 2
* AC Adaptor
* Technical Reference Guide
* Barcode Wand
* Tape Recorder / Player
* Original Commercial Software Tapes
* Extra Software on Tapes and Disks
* Tape Recorder Cable

Compaq Armada 4125 / Media Base / Handle Battery / 802.11b Wireless

This was my workhorse laptop for a while a while ago. Works great and in
very good condition. There is a little cracking around the hinges but it
doesn't affect their function in any way. Solid machine for Windows 98
or Linux. Currently has Windows 98se installed. Battery charges but no
guarentee on its life.

* Compaq Armada 4125
* Lithium Ion Handle Battery
* AC Adaptor / Charger
* Media Dock
o Enhanced Speakers
o CD-ROM Drive
o Extra Battery Bay (Battery Not Included)
* Extra Hard Drive Caddy
* 802.11b Wireless PCMCIA Card

* Targus Notebook Case

Quasar HHC Handheld Computer / Printer / RAM Expansion

I picked this up at a hamfest a few years ago and then never did anything with it. It is not is perfect shape but it does come up and display things. I have no idea what it is asking or how to do anything with it so that is as far as I can test it. The slip case has a clear window that has clouded over time. It uses an internal rechargable battery which I cannot guarentee.

* Quasar HHC Handheld Computer HK2608UE
* Printer Cassette Interface PC913UE
* RAM Expansion PC944UE
* AC Adaptor Charger
* Mounting Tray
* Slip Case

Epson HX-20 Notebook Computer

I am cleaning out some of my old computers and came across this one. It is in very good condition and seems to work well. It has an internal rechargable battery that seems to charge but I make no guarentee on its life.

* Epson HX-20 Notebook Computer
* Modem Acoustic Coupler
* AC Adaptor
* Original Manuals

Tandy Model 100 32KB / Hard Case / Cassette / Software / Lucid Rom

I got this from a friend but I don't really have a use for it. It is all in pretty good shape, there is some yellowing of the top of the M100 itself. Everything seems to work but I have not tried reading all the tapes.

* 32KB Model 100
* Official Fitted Hard Case
* CCR-81 Cassette Recorder
* Cassette Cable
* Modem Acoustic Coupler
* AC Adaptor
* Software
o Scriptsit
o Statistical Analysis
o Basic Language Lab
o Lucid (On ROM, Installed)
* Original Manual
* The TRS-80 Model 100 book

Olivetti M10 8KB Notebook Computer

I have had this for a few years and don't really use it any more. It is in excellent shape and works perfectly.

* M10 8KB Notebook Computer
* Original Slip Case
* Quick Reference Manual
* Users Guide

NEC 8021a 32KB x 2 / 8231a Floppy Drive / 8207a RAM Expansion

I am cleaning out some of my old computers. I have had this for quite a few years but it is still working great. The floppy drive unit has some cracking around the back but it was repaired by the previous owner and seems to be holding up very well. Functionally the drive works great. I will include three copies of the system disk that is needed to access the floppy. The hard case has a water stain on the inside but it is in pretty good shape otherwise.

* NEC 8021a 32KB Notebook Computer
* Second Bank of 32KB RAM (Installed)
* NEC 8231a Floppy Drive
o AC Adaptor
o Serial Cable
* NEC 8207a 128KB RAM Expansion (4 Banks of 32KB)
* Official NEC Hard Case
* NEC AC Adaptor
* 8431al Manual

NEC PC-8500 / PC-8431A Dual Floppy / PC-8441A 128KB RAM Expansion

I actually bought the computer and floppy drive and interface new several years ago from a company that was selling off old stock. Sadly I no longer have the boxes. Everything seems to work perfectly and it is all in excellent shape. This system runs CP/M so you can find software for it from various sites. It also has several programs built in including wordstar and calcstar.

* PC-8500 Laptop Computer
* PC-8431A Dual Floppy Drive
* PC-8441A CRT / Disk Interface
* PC-8461A 1200 Baud Modem
* PC-8407A 128KB RAM Expansion
* Original Manuals
o PC-8500 Users Guide
o PC-8431A Guide
o PC-8461A Guide
o Wordstar To Go
o Calc To Go
o Telecomunications and Personal Filer Guide
* AC Adaptor
* Disk and CRT Cables

Epson PX-8 Geneva Notebook CP/M Computer

I have had this for a few years but I am not doind anything with it anymore. It is in very good condition and everything seems to be working. It has an internal rechargable battery but I cannot guarentee its life. The included AC adaptor is a generic Radio Shack model but it works quite well. This system also has the attached Multi Unit 64 with a Utility ROM installed.

* Geneva PX-8 Notebook Computer
* Multi Unit 64 H108A (Attached)
* AC Adaptor
* Utility ROM
* Wordstar ROM
* CalcStar ROM

Targus Notebook Computer Backpack from Xircom

I got this as a bonus with something I bought from Xircom years ago. I have never used it and it is in brand new perfect condition. It is actually a very nice Targus notebook backpack bag with lots of pockets and a strap to hold the computer and padding where needed. The pictures may not be great, black on black is hard to photograph well with my camera.

NEW A-Power External USB 2.0 2.5" Hard Drive Case

I bought this a little while ago but never used it. It is new and in perfect condition.

NEW COSMOS External USB 2.0 2.5" Hard Drive Case

I bought this a little while ago but never used it. It is new and in perfect condition.

Demon Gun Joystick for First Person Shooters PC Games

Picked this up at a computer show a few years ago and never took it out of the box. It is mainly for fun, really feel like you are shooting those monsters in your favorite first person shooter or other PC video game. Note, this is not a light pen and does not detect the screen, it is just a very unusual joystick.

Set of HP Omnibook 300 Manuals

I sold my Omnibook 300 years ago but just found these manuals. Hopefully they will be helpful to someone.

* Personal Information Guide
* Microsoft Excel Guide - The Basics
* Operating Guide
* Accessories Guide
* Word for Windows Guide - The Basics

USB Electronic Scale

I got this and then found a deal on another larger scale so I don't need this one. It is brand new in the box. It connects to your computer for its display and using the included software it can automaticall fill in

some shipper's online forms.

New Small Silver "Multimedia" Keyboard

In searching for a couple keyboards for a specific use I bought this. It is a nice keyboard but didn't fit my needs. It is in perfect condition, new in the original box. Its dimensions are 11.5 inches wide by 6 inches deep (at the center) by 1 inch thick.

Targus Dual Mode Optical Notebook Mouse / Trackball

I was trying to find something to use for a specific purpose and this didn't work out. I have two but this one has never been opened. It is brand new in the original packaging. The dual mode part is that it can be used as a handheld trackball or as a more normal optical mouse.

3285. Gear for sale

Newsgroup: rec.radio.amateur.equipment
Date: 2006-07-13 04:00:48 UTC
From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <Gzjtg.9952$PO.6306@dukeread03>
Source record: 8371

I have for sale the fellowing equipment:
1.Yaesu FT-707 HF Transceiver with WARC Bands, 100 watts, Good Shape, Price $275.
2. Yaesu FP-707 12 Volt DC Power Supply, Nice Shape, $75.
3. Yaesu FC-707 Antenna Tuner with SWR/Power Meter, $75.
4. Kenwood TH-315A, 220MHz, HT, needs battery and antenna, works, $75.
5. Icom-02AT 2 meter HT in good condition, $75.
6. Icom IC-28H 2 meter Mobile transceiver, works, $75.
7. Dentron JR. Monitor/MobileAntenna Tuner, nice shape, $65.
8. Yaesu YD-844A mic, great shape, $55.
All prices are plus shipping. If your interested in any of the gear, please e-mail me for more detailed information. All gear has been checked out and works. Thanks, Charlie Hugg, K5MBX

Nonsense. Having to do something promotes laziness? Then exercise
promotes sloth and dieting promotes obesity. By your "logic", that
is.

Not really, I just hate needless abbreviations, and even more so as
my vision gets worse.

> time.

I was asked a number of times why I didn't have a degree in EE. When
I found a problem, or saw something that needed improved I didn't just
run crying to the MEs. I researched the problem and wrote up a detailed
report. I found the way to correct the problem, found a source for any
part we didn't already stock, and submitted it directly to the engineer
responsible for that item. After a while they would just flip through
my paperwork and submit it to be typed up on the proper forms, then sign
it off. I had planned to go to college and get my degree, but my time in
the Army threw those plans out the window.

Not really, but a lot of guys have never done anything more than
solder a microphone plug to a cable, and then use those crappy
solderless coax connectors. Actually, I'm always happy to meet a ham
with some real electronics skills. I meet a lot of retired hams here
near Ocala, and very few of them know any electronics. I hear the same I
could through together a CW rig from scratch in an emergency, then they
admit they don't even have an old ARRL handbook to look up a schematic,
or any parts. One told me he would use parts from his TV set, that the
horizontal output tube and a few other parts would put him on the air.
He didn't even know that his six month old TV only had one tube, and
I've never seen a transmitter built from a CRT and salvaged, unmarked
SMD parts.

Biggest isn't the goal, but a long term large project is always
interesting. I always liked a challenge, and left the easy jobs for
everyone else.

I never built anything like that, but I did repair some electronics
for the manager of the planetarium at the Orlando Science Center years
ago. I have worked on numerous industrial control systems, as well.
Sounds like it was a bit of a challenge. Good for you. :) My next
couple projects are an electric gate controller, and a motorized flag
pole, both with custom controllers with 100 MHz Ethernet interfaces so i
can run them from any computer on my home network. I have about 50' of
used TV tower in storage. I'm going to weld angle iron up two legs and
use a motorized trolley to raise and lower the flag. The gate openers
are a pair of used 24" sat tv jacks with a custom controller, a web cam,
and an emergency open button that sets off the security system as the
gate opens.

What about the people locked out by CW requirements who wanted to design and test RF equipment? Not the "I don't do solder" types, but people with a real love of electronic design? I've always had a severe dropout in my hearing that made it impossible to listen to CW for more than a few minutes at a time. I would end up with headaches, some that lasted for days. I finally threw in the towel and went into other areas of electronics. I wanted to learn microwave communications. Along the way I worked in Broadcast and Two way radio servicing. My last job was building commercial microwave receivers at Microdyne. They were custom built from base models for the customers application, on whatever band or segment they needed, and with IF and video bandwidths from 10 KHz to 40 MHz. In a place like that you would have thought there would be a lot of hams, but I only found about a dozen still licensed, and not one who was still active.

Source record: 8375

Greetings:

I have a lot of 5, Midland 18-330B UHF (445 Mhz and up) NMO mount mobiles antennas up for auction. These work very well for the 440 to 450 Mhz Ham band. They are 5/8 over 1/2 wave in design (about 3Dbd gain).

Cutting chart included to use them above 450 Mhz.

Please see:

http://search.ebay.com/_W0QQfgtpZ1QQfrppZ25QQsassZve3tjd

Thanks, Tedd, VE3TJD

i hear you on the headaches I remmebr them from my teen aged efforts at
Morse
amusing I listen I can lsiten to morse all day without a problem as
long I don't try to break it down at all then a headache sets in a in
matter of seconds and slowly grows as I try to process the signal

I can in fat qso in the mode using pc with a spectrographic display to
allow me to look at the parts of the signal I can't read with the pc

3291. FA: Lot of 2 meter Crystals for Kenwwod TR-2200 and Drake TR-22

Sorry if this is off-topic. I couldn't find a more suitable newsgroup.

A 2500 Watt 120V generator (Powermate Proforce PM0102500) seems to be working fine, but engine sounds a little rough. Why not touch up the carburetor adjustment and see if that improves it?

First I turned the screw on the carburetor to the right. Some resistance to turning, but absolutely no difference in engine speed or sound.

Then I turned the screw to the left. Screw is quite loose and still no difference in the engine, but now I have gas leaking from the bottom of the carburetor! I turned the screw to the right until snug, and the gas leak has stopped.

There is no other adjustment visible on this carburetor. Is that screw intended to drain the carburetor, or have I seriously messed up something?

I've searched the web for data, and only found that the 5.5 HP engine was made by "Sumec". I gather that they make motorcycle engines, but found no carburetor data.

There have been many people on the air thanks to a 6BG6 or similar.

>He didn't even know that his six month old TV only had one tube, and
>I've never seen a transmitter built from a CRT and salvaged, unmarked
>SMD parts.

Interesting idea, though - a CRT as a final with an inherent monitor.
I wonder how much RF output you can drive a CRT to. And, if you made
it AM, would that be "focused" modulation? Or, if you were listening
to the flyback, "high sing modulation"?

> I never built anything like that, but I did repair some electronics
>for the manager of the planetarium at the Orlando Science Center years
>ago.

I'll take a stab - a Minolta projector? I doubt it's a Zeiss.

> What about the people locked out by CW requirements who wanted to
>design and test RF equipment?

That was the whole idea behind the Tech ticket - minimal CW that anyone could get to in a few weeks and enough written exam to prove that you knew electronics. Anyone who can design or test RF equipment should be able to draw a few schematics.

There's the problem. "breaking down" CW is like listening to the
letters someone is speaking. You don't break it down, you listen to
what's being said.

Noon-

I was hoping to find someone who was more familiar with carburetors than I
am, that may have run into an adjustment like this one.

I've already "paid the man" for a brand-new unit. It isn't quite like I
had a bag of parts and wanted instructions on how to put it back together!

Try this on for size... have your favorite small engine mechanic do a
program for your local radio club on general maintenance, tune-ups etc for
generators... after all, it *IS* hurricane season :-)

Learning something promotes laziness? Typical.

>learning CW promotes laziness

Yep, as I said, typical. Of a lazy person. Learning doesn't promote
laziness, laziness promotes not learning.

Well at least your estate will get to keep your life savings. If you get
sick late in the year, and the healthcare facility/hospital shut down
for the rest of the year because it ran out of government money (a
typical scenario in Canada), there will be no one to give you any care
and you'll just die. But hey, your life savings will still be intact!
Is socialized health care great or what?

well Fortran Pascal (I always liked that one) assably with ADA
assmebly language Basci of course C at some level but not using much
they may have added to it sincethen

but what does this have to with the future of the ARS

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.ourmedia.org/node/247756

Topics discussed in SolderSmoke #27:

-- Computer woes
-- Bill's visit to the Dominican Republic
-- Building Xtal oscillator with kid
-- Book Reviews:
"The Art of Electronics"
"The Electronics of Radio"
-- Ether and Quantum Mechanincs, Tao of Physics
-- SolderSmoke Mailbag: Nigel in Dover, Mike WA6AWA, Matt KC8COM

CHECK OUT A PICTURE OF SOLDERSMOKE'S LONDON STUDIO:
http://usgadgeteer.blogspot.com/

Listen at: http://www.ourmedia.org/node/247756
Background:
Tired of listening to Led Zepplin or NPR on your
I-Pod? Wouldn't you like to be able to carry with
you the kinds of ham radio conversations that you
listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in
London, England meet regularly on the ECHOLINK system
to discuss their homebrew radio projects. We are
making them available as PODCASTS.

NEW RSS FEED: You can subscribe to the program, have
them downloaded to your MP-3 player, and listen to
them at your convenience. To subscribe, just cut and
paste this URL into your I-poder (or similar)
software. We've been having trouble with our Ourmedia
RSS feed, so Mike (software wizard that he is) has
homebrewed his own RSS feed. In order to subscribe to
SolderSmoke, point your podcast software to:

http://kl7r.ham-radio.ch/soldersmoke.rss

If you don't have an MP3 player you can just go to the
site below and listen to the latest program (and
earlier editions) using the audio software on your

computer.

http://www.ourmedia.org/node/247756

Here's the homepage for our show. All our programs are available here. There is also a blog and links to some of the sites and documents we've been discussing: http://www.ourmedia.org/user/36170

We hope you enjoy the program. Please send us feedback.

73 from London
Bill M0HBR N2CQR CU2JL

Sorry John, do some reading for once as that is the reality of the
Canadian system. You'll actually learn something if you do research
yourself and not just listen to NPR and CNN.

Now, on the other hand, if you live in the U.K., you'll still have
healthcare through the end of the year, but if you are too old, they
just let you die as it is not worth the expenditure to keep someone old
alive even longer. But again, hey, your estate gets to keep the money!

Come on, this isn't really John now is it? Hillary Clinton, is that you?

Dumbing down has hurt ham radio.

>people that live in glass house whoudl dress in basement

Yep, you should. Try:

"People who live in glass houses should dress in the basement"

It's ironic justice that someone who posts a typo flame posts more
typos in his flame than the post he's flaming.

nope

infact I as far as I recall I never rode a bus to school at all

other than I did try a few times geting to college on the city bus
system it took way to long and saved very little (but gas cheaper then)

> no one to give you any care and you'll just die.

Pray tell, oh wise one, from what source are you getting this information? You claim that this is a typical scenario in Canada, which is utter BS (= Bush shit), which means that it happens all the time. It seems rather strange that none of this seems to make the headlines or news.

BTW, I overheard this while I was visiting in Toronto and witnessed an accident: " Wow! The police and ambulance are much quicker here than in Atlanta".

Maybe they just don't want you to know the truth? Not surprising, since the
government in CanaDuh woud fall if you ever discovered the truth.

> BTW, I overheard this while I was visiting in Toronto and witnessed an
> accident: " Wow! The police and ambulance are much quicker here than in

Did the accident involve the police and the ambulance racing to the donut shop?
Maybe that's why they appeared to be quicker.

3370. Strange problem with ICOM AT500 tuner

Newsgroup: rec.radio.amateur.equipment
Date: 2006-07-16 14:07:25 UTC
From: "ve3fwf@sympatico.ca" <bernard.murphy@sympatico.ca>
Message-ID: <1153058845.153691.233310@i42g2000cwa.googlegroups.com>
Source record: 8256

My ICOM AT500 has a fault where the auto tuner portion works properly
on transmit but on receive, the tuner retunes to a non matched setting.

The presets work and I can manualy tune the tuner via the presets (but
that defeats the point of having an auto tuner)

Problems began when the shaft on one of the motors come loose. I
believe I have everything mechanically back together correctly as there
seems no way that the auto tuner portion should work on transmit and
then de-tune on receive.

This unit is full of analog circuits and I have no clue where to start.

Any help or suggestions would be appreciated.

----> hamjamming dot com ROCKS !!!!!!!!!!!!!!! Great job dude!

Now if SOMEONE could just set up an online
shrine with .MP3 files of the infamous 14.313/14.300/3.894.5
wars of several years ago, the cycle would be complete.

WWW.HAMJAMMERS.COM

Free Audio Downloads From The Dark Netherworld of Ham Radio:

The Most Infamous Lids To Ever Disgrace The Amateur Service!

This website is devoted to demonstrating what an absolutely
worthless, stupid hobby ham radio is.If anybody tells you that
ham radio is fun, or interesting, or that you will meet nice,
interesting people by becoming a ham, DON'T BELIEVE THEM!

Hams are the biggest group of whiners, snivelers, complainers
and all-around no-talent losers you will ever meet.This is
because the system itself is a veritable recipe for selecting
dweebs and idiots with pocket protectors: Take a fat
dweeb who has no friends or social skills and can't
get a date; give him a trivial exam where the questions and
answers are all available beforehand; and then give him
a license and tell him he's somehow "special". Voila!
You have an insufferable, boring ham radio operator
who thinks he's morally and intellectually superior to
other people.

It's inevitable. Don't make the mistake of getting
involved in this hobby!

WARNING: Some of the audio files are
rated "R"! Your Webmaster cannot be responsible
if you become addicted to listening to jamming recordings
and you lose your job because you don't show up for work.

Oh Brother!
Reality check time: Why don't YOU read a bit about Medicare D?
Aging baby boomers are about to be screwed in ways they couldn't even
imagine.

Insurance companies entirely control Congressional debate and actually
write the rules. Most of Congress doesn't even READ what they're
signing on to.

O'Reilly, is that you?

I hope this is the correct newsgroup for this question.
Can someone explain DX Ducting?
I believe thats the correct word.

I live in a rural area, and my nearest tv stations are about 50 miles away. Those 3 stations normally come in pretty good. (one VHF, two UHF) I have a 7 element antenna pointed approx. north (toward that city). The other closer stations are to the south, and are 65 and 90 miles away. They dont come in as good, but are usually viewable. Turning the antenna South helps those, but I have to do it manually until I get a new rotor. (old one died).

For some reason, starting on Saturday, I have been getting tv stations from up to 275 miles away, yet I can not get any of these "local" stations at all. What's really weird, is that the stations I am getting are all to the East of me. In other words, they are broadside to the antenna. I have never heard of getting a signal on the broadside.....

Just for grins, I called the 800 number of one of these distant stations, and they were happy to hear they were transmitting about 250 miles. They said the reason is called ductingm and said it's caused by the atmosphere and weather conditions.

OK, I can undestand this (sort of). I do recall back in the 70's when I had a CB radio in my car, and getting "Skip". But this TV things is different, becasue a tv antenna is directional, unlike a CB antenna that tends to transmit in all directions.

I looked up "Ducting" on the web. Most were about heating ducts, but did find one link which was way over my head. I'd have to be an engineer to understand it.

In simple terms, could someone please explain this. Particularly why I can not get the "local" stations, and how can I get very distant signals on the broadside of my antenna?

Thanks

Mark

<snippage>

Basic somewhat oversimplified explanation of atmospheric ducting goes as such:

You have a layer of warm air at the surface, you have another layer of warm air high aloft. In between those you have a layer of colder air. The ducting occurs in this layer. Depending on how far this condition extends, you may have ducting of signals from 100-1500 miles distant (roughly, YMMV). Note: The condition need not exist either in the area of the station received or your own area, so long as it exists between in an area where the originating signal can be captured and ducted to an area near you.

Although beams are directional antennas, they can and do pick up broadside
to the beam. They normally just don't pick up as well. Beams have a
pattern that has the strongest pickup to the front, a smaller pickup from
the back, and very weak pickup from the sides. If the signal is strong

enough, you will be able to receive a signal off the side of the beam.

Thanks to both of you for the reply. I wanted to try to turn the
antenna toward those stations, because if they came in that good on
the side of the antenna, they would have been crystal clear. We are
having a severe heat spell. temps around of over 100deg.F That must
have something to do with it. But it was too hot to climb on the roof

Mark.

ROFL, Sorry. I'm starting to believe laughing at him just encourages him
to make more typo's. We need to stop laughing and pity him instead.

Maybe if he had to learn CW the mental process would help his spelling.

Not capable of producing a single coherent sentence. Not capable of
learning 26 letter and 10 digits. And thinking gives you a headache.

Only conclusion is that you don't have enough practice, so stop
thinking entirely before you cause permanent damage.

Who do you propose would buy the bands? The only ones even remotely commercially viable are 70cm and above, and those are such small segments that they wouldn't be all that viable either. The bands 220 and below are not viable at all commercially because of the size of antenna needed. HF? Forget it!. Maybe give it to the pirates to play with.. that would be the only thing that could be done with it. I say leave it as is.

3436. Length & number of radials

Newsgroup: rec.radio.amateur.equipment
Date: 2006-07-18 17:12:41 UTC
From: Reg Edwards <g4fgq.regp@ZZZbtinternet.com>
Message-ID: <GMWdnTlHz-nziiDZRVnytw@bt.com>
Source record: 8322

If you are considering a new vertical antenna, instead of guesswork
and copying somebody else's un-thought-out efforts, download program
RADIAL_3 from website below.

The program assists with choosing an economic length and number of
shallow-buried ground radials. It takes a new look at how radials work
by considering them to be lossy, single-wire transmission lines,
open-circuit at the other end.

RADIAL_3 is a self contained file, 55 kilibytes. Easy to use. No
training needed. Download in a few seconds and run immediately.

==========
If the Hustler 5-BTV has any loading coils in it then its efficiency
will be less than 97%.

The program applies only to simple unloaded verticals which got into
the program only to illustrate how the radials affect efficiency.

I opened the front panel of the radio to look for the back light which stopped working.
There seems to be a factory mod, a thin green wire running from the output of Q3003 5v regulator under the top cover to a place behind the front panel.

This green wire has broken off from the position where it was soldered behind the front panel and I can not find where it is supposed to go. The radio will not transmit with this wire disconnected.

PLEASE, can any of you with this radio take a look and see where this wire is supposed to be soldered to?

Thanks

Joel

Hey, Markie, did your father in law really molest your shemale wife as
you've admitted to on Nim Busters?

3451. Luggage Rack Mounted NMO Mounts?

Newsgroup: rec.radio.amateur.equipment
Date: 2006-07-19 22:46:17 UTC
From: Gary <danahers@comcast.net>
Message-ID: <o8CdnYcRlamkKyPZnZ2dnUVZ_rGdnZ2d@comcast.com>
Source record: 8337

I'm giving serious thought to buying a new vehicle and you know it's bad when your first thought is not the mileage or seating capacity, but where to plumb the radio! Does anyone manufacture an adjustable bracket that will fit into or around the luggage rack frames? I can fabricate my own, but not having a full-featured machine shop, it might not be as pretty as my wife would like.

Bad? No... I'd say it's entirely natural >>grin<<

> Does anyone manufacture an adjustable bracket
>that will fit into or around the luggage rack frames?

Diamond makes several which might meet your needs. The K515SNMO is an
adjustable (2-axis) mount with a "universal luggage carrier" bracket.
They even make a motorized luggage-rack-mount base (K9000LRM) which
you can lower electrically from inside the vehicle.

http://www.rfparts.com/diamond/Product_Catalog/mounts.html to see
photos; the mounts themselves are available through the usual online
and storefront ham-radio dealerships.

Marine antenna mounts work great as well, and most are built to withstand the elements better.

See the AES catalog pages 78-89: http://www.aesham.com/pdf/pages78-89.pdf

for several types of mounts..

3455. LPA1 How do I make an antenna for it?

Newsgroup: rec.radio.amateur.equipment
Date: 2006-07-20 00:28:04 UTC
From: carl6405@yahoo.com
Message-ID: <1153355284.091947.210530@75g2000cwc.googlegroups.com>
Source record: 8341

Ok, first I ask all of you smart folks to excuse my ignorance on this topic. But trust me, I have searched all over to find the how to's on this subject. Please let me know where I can either see pictures or some good instructions on this.

I assembled a FM 25B and its working well. Also, purchased and assembled the STC1 and it is working well.

What about the damb LPA1 RF Linear amp? Well.. Ive plugged in everything from an old shoe to rabbit ears and no help on gettin out there. Just kiddin about all that. But, they give you RCA jacks to plug an "Antenna" into. J2, the output. I know I need a dipole antenna, and plenty of people here has made one.

I am in need of some simple instructions, I have plenty of copper (and coat hangers if needed)to use.

Input from PC sound card, to STC1c
Output from STC1c to
FM 25B (Anyone know of any mods for that?)
Output from FM25B to
J3 (Input)RCA jack
J2 RCA Jack Output to? (How stupud is putting a dang RCA jack there for an antenna?)

My email address is carl6405@yahoo.com
If you have this set up, please take a picture and send me so that I can see someone elses set up.

<snippety>

With the first-generation antenna installation for my van (better known as the 'Techmobile'), I used 10.5" high 19" blank aluminum rack panels, suspended by Adel clamps around the cargo rack crossbeams. See http://www.bluefeathertech.com/kc7gr/thevan.html for some outdated photos (major updates are pending). If you choose to do it that way, standard NMO mounts will not work (the rack panels are too thick). You will need 'thick mounts' (available via Tessco from Radiall/Larsen, PCTel, and other vendors).

It worked OK for a couple of years, until the rear hatch gaskets (where I was running the cables through) started losing flexibility and leaking in rainy weather. I converted everything to standard through-roof NMO mounts, and haven't had a problem since. I would recommend that you do the same.

Yes, there are safe-and-sane ways to drill the correct size of hole, even in a new car. My personal favorite is the Irwin Manufacturing 'UniBit,' also known as a step-bit. Well worth the $45 or so they cost.

Couple said Unibit's action with a standard deburring tool for sheet steel (available from any well-stocked hardware store), and you're good to go.

Reserve a full day, take your time, and drink plenty of water.

Happy installing.

Harbor Freight has a set of three sizes on sale for $9.99 right now
thought Aug. 14th. <http://www.harborfreight.com> Item 91616 The
website shows $19.99 but the retail flyer I got in the mail today shows
the $9.99 price.

DRILL 28 HOLE SIZES!
This compact set replaces 28 individual drill bits. Two-flute design gives you faster, smoother cutting. Titanium nitride coating for cooler running.
Automatically deburrs holes as you drill
Quick-change 1/4'' hex shank
M2 high speed steel for long life

Sizes:
3/16'' to 1/2'' Six Step Bit (3/16'', 1/4'', 5/16'', 3/8'',7/16'', 1/2'')
1/4'' to 3/4'' Nine Step Bit (1/4'', 5/16'', 3/8'', 7/16'', 1/2'', 9/16'',5/8'',11/16'',3/4'')
1/8'' to 1/2'' Thirteen Step Bit (1/8'', 5/32'', 3/16'', 7/32'', 1/4'', 9/32'', 5/16'', 11/32'', 3/8'', 13/32''ï¿½, 7/16'', 15/32''ï¿½, 1/2'')
ITEM 91616-4VGA

And if you go to the store, make sure you take the retail flyer along
with you. The one time I failed to do so, the item was marked with
the higher (non-sale) price in the store, and they wouldn't honor the
flyer price without a copy of the flyer in-hand.

hi gary,

my car looks like a porcupine ! only kidding....

who counts drink cup holders, we count antenna mounts....

a few links for you,

antenex usa made antenna and mounts

http://www.antenex.com/

get the hole saw, hs34 it is the right tool for the job of hole drilling.

http://www.antenex.com/c_search.asp?txtFunction=browse2&selFamily=MNA&txtSubFamily=X%2DACT%99+Hole+Saw

I get my stuff from radio outfitter.com http://www.radiooutfitter.com/

http://www.radiooutfitter.com/store/HS34.html

very good pricing, low ship fees and no problems...

I am assuming that your intention is to mount V/UHF antennas on the vehicle.... Being fully mindfull of the limitations of V/UHF, and that its used for local repeaters and not DX, a real simple and inexpensive solution would be to go with a glass mount antenna.... the one I run on my Tundra is a 2m/70cm dual band "cellular look-alike"($25.00 on Ebay) on the passenger top corner of the windshield. No holes *ANYWHERE* for antenna mounting, and works sufficiently well, even on low level machines in rural south Mississippi.

<snippety-two>

At that low of a price, I'd be really concerned about the quality
of these bits. More specifically, are they made-in-Taiwan imports, made
from Lord only knows what grade of steel, or are they the same quality
as the Irwin products?

To put it another way: You gets what you pays for. Caveat emptor
indeed...

I'm not inclined to drill holes if I don't have to. :-0

With regard to glass mounted antennas, I have never seen one that would
work properly over time, so I will avoid those as well.

The Diamond K515SNMO looks promising but it must live on the side rail
and not more centered. The cross members of what I am looking at
resemble an airfoil and are about 3 inches wide. Would be nice to have a
bracket that would fit over and under that cross piece and then mount to
the bracket. I might have to get some stock and go to fabricating.

Also be mindfull of your overhead clearance....The glass mount, cell
look-a-like is not a problem, but a 30+ inch tall diamond on top of a
vehicle could cause some problems in drive-throughs, garages, etc.
With the antennas that currently reside on my Tundra, my clearance is
12'6"....no more bank drive-throughs, fast food, parking garages, and plays
hell with low branches and wires.

I have both the original Unibit brand and the Greenlee imitation.
Both are equally good. I have seen other brands, like Stanley, that
should perform well. Some of the prices I have seen lately on good
brands make me shed a tear over what I paid 10 years ago.

There is one problem with mounting on the cross members of the rack...
After time, the cross member will be twisted due to the force on it from
the wind pushing on the antenna.
It will happen faster the higher the ambient temp, and material of the rack and
color...
The only way to keep this from happening, or to minimize the flexing, is to
mount it as close to the side rails as possible..
I would add an extra cross member right behind/before the stock cross member,
and attach an aluminum or stainless steel plate with NMO hole to mount the antenna.
The resulting setup will be much stronger, and negates the special
clamp/mount needed..

I don't know about how rare it is. It was also used in the Johnson Viking
(maybe called the Viking 1 as there was a second version that used a pair of
6146 tubes that is the equal of the 4D32).

They work fine for me, or I wouldn't have recommended them. In fact,
I bought a spare set today, because they have a tendency to disappear
from my shop I've never broke or jammed one of them. I normally use
them in my drill press, but I have used the larger size to deburr 1/2"
EMT when doing electrical work.

The store in Ocala always has a stack of them on a stand right inside
the front door so you can pick one up as you enter the store. Also, you
want to be on their E-mail list for specials. For those you do have to
print out the e-mail w/coupons to get the extra savings. The coupons
have a serial number so you can't buy more than the advertised limit.

You mean a PB-2?
http://www.batteriesamerica.com/kenwood1.htm

The BC-7 is going to be hard to find due to its age. Watch eBay.

3479. IC-718 carrying handle question

Newsgroup: rec.radio.amateur.equipment
Date: 2006-07-21 14:58:17 UTC
From: behr@muir.math.niu.edu
Message-ID: <e9qq29$vk6$1@news.math.niu.edu>
Source record: 8415

I just bought an IC-718 as a backup rig. My older IC-736 has a carrying handle attached, and I don't carry that one much, so I am hoping to transfer the handle from the 736 to the 718. The spacing of holes etc. is identical on both rigs, but apparently not the screws. The 736 uses metric 4 mm machine screws - does anyone know what is used with the 718? If you have the Icom MB-23 handle kit (that's supposed to be for the 718) lying around, I'd very much appreciate knowing what kind of screws it comes with. Probably self-tapping ones, but I don't want to ruin the holes in the radio by using wrong screws. I couldn't find anything on the Web. Thanks a lot.

Hi All,

I have an old radio amateur's prefix map of the world on the wall in my shack. I got it from the radio amateur callbook company about 25 years ago. The size is about 30" X 40". It's outdated prefix wise, and it is starting to show its' age. On 1 side it has ITU zones and on the other side it has CQ zones. Does anyone make a map like this any more ???

Source record: 8199

Hi all, can you help me on this problem please?
My friend who lives not to far off from me has his PC`s wired up to the Internet via wireless, this includes mouse, keyboard, and of course Internet.
The neighbour who lives next door has a 14 element Yagi 2 mtr beam on his roof alongside other antenna.
Since this has been put up every time it is switched on and operated (I would think) it knocks out the wireless Internet and mouse and keyboard.
And also the telephones that are also wireless. (I think they are the digital type)
Is there any thing that can be done?
He has approached the neighbour but he wont have any of it and simply will not listen.
This has only happend since all the equipment has been installed on the roof.

TIA.

Assuming the licensed amateur station has been installed with all applicable
measures taken to reduce RFI, then there is not a whole lot of recourse for
the guy with all the unlicensed wireless stuff other than to buy wireless
stuff that has better filtering.

In the majority of the world (including the US and the UK) the 2.4GHz ISM band is available for wireless use by unlicensed users on a secondary basis. That means that wireless users may not interfere with others, and must tolerate any interference received.

In this case the licensed neighbor is under no legal obligation to do anything to correct the interference.

It is highly unlikely that the neighbor's 2M ham equipment is causing
any of your friend's problems. It sounds to me like there has been
little evidence to indicate otherwise, other than the physical presence
of antennas on the roof.

A more likely cause for your friend's problems is that a neighbor
(maybe even the ham) has computer wireless networking equipment of some
kind, and this is interfering with your friend's network. Or, it could
be cordless telephones that also operate in the wireless network
frequencies.

You really need to get more facts as to what is actually happening in
your friend's house and do some research before blaming the ham. It
could be him, but more likely it is another cause. To bad the ham is
not cooperative as this could probably get him off the hook for the
cause.

Good luck.

I agree. I run 100-watts to a 20-element 2-meter beam, and there is no interference to my wireless network, wireless phones, wireless keyboards or wireless mice. And none of my neighbors have reported any problems either. Does this happen when the ham is not even home?

Can't speak to the WiFi issue at all.. but it's notable that most wireless
keyboard/mouse setups operate on 11m R/C control channels (ours uses 27.045
MHz). I've seen rare ones that operate on 900MHz, and are very susceptible
to cordless phone interference.

Hmmmmm........ What bands does your friends equipment use? From the information you have given, you have no reason to select the ham next door as the cause, other than he has a 2 meter antenna on his property. The equipment in your freinds own home could be part of the problem. e.g. If the cordless phones are 2.4 Ghz they could be killing the Internet connection whenever the phone rings. The mouse and keyboard could be bluetooth devices and they also work in the same band. Then there is the possibiltiy that someone in the neighbourhood also has a wireless network running on the same channel, or 2.4Ghz cordless phones and that could be the cause of some of his grief. It requires much more investigation that you seem to have done before you can say the guy with the ham antenna is the cause. Two meters is a long way from the ISM 2.4Ghz band. It would be highly unlikely that equipment in the 2 meter band would interfere with 2.4 Ghz equipment.

I am also surprised the ham is being uncooperative, but if he was approached in an adversarial manner, that could explain it. I'm sure he is well aware that the devices of which you speak are Part 15 and that he does not have any obligation to mitigate the problem even if he is the cause. Most hams would at least help investigate the problem if nothing to clear his good name.

You can use Netstumbler to check for orther networks in the neighbourhood.
Download it from:

http://www.netstumbler.com/downloads/

Install and run it on a wirelessly connected computer (preferably a
laptop), It will very quickly show what wireless networks are around the
location. You might be amazed at how many there are !!!

Hope it helps a bit.

Ok thank you all for your kind replies.

He was approached with kindness, but sadly he is the type that is above
many laws and not just Amateur Radio.

I shall send my friend a link to netstumbler as you suggest, who knows
this may give him some help.

Many thanks all.

Mike.

Hi, yes it only happens when he is at home.
This has only happened since the antenna has been put up on the roof.,
never before.

Mike.

Still does not prove that it comes from the ham's setup. It could be merely
coincidental. Something else may have happened in the area that is the
problem. Coincidences do happen.

FWIW, The last time I put up a tower with antennas, I left the feedlines and rotor control cables coiled and tie-wrapped to the side of the tower for a week.... I got a dozen complaints..... turned out that there was an unauthorized and *very* illegal CB station on the next block over. The CB'er ended up in a real world of hurt.... this was in family housing on a Navy base. Between the Navy, and the FCC.... well, lets just say that he can't even go near a transmitter for a very long time.

3527. FS: CA-819 Dual Band Cellular Amplifier

Newsgroup: rec.radio.amateur.equipment
Date: 2006-07-24 19:54:37 UTC
From: "M.L. Katz" <mcguyver@cfl.rr.com>
Message-ID: <1A9xg.12$6q1.10@tornado.tampabay.rr.com>
Source record: 8213
Cross-posted to: alt.ham-radio.vhf-uhf,misc.industry.electronics.marketplace,rec.radio.amateur.equipment,rec.radio.swap

I have a CA-819 dual band cellular bidirectional amplifier for use with dual band cell phones. You'll need a sma to (your cell phone, external antenna connector) and that's it. Just plug into 12VDC..

Dual Band Wired Amplifier for all North American 800 MHz & 1900 MHz carrier systems (excluding iDEN Networks)
Features / Benefits
. Increase revenue through customer retention
. Less cell site build out
. Keeps customers connected to utilize the full potential of their phones and network services.
. Carrier friendly in urban areas
. Increases data traffic & data speeds
. Communication only occurs through the RSSI of the handsets
. Requires zero additional bandwidth from cell towers
. Case designed for Zero RF Emissions

CyfreT Amplifiers seamlessly bridges RF amplification between Cell Towers and todays elaborate handsets without disrupting the carrier's tower management Networks. Thus, the entire CyfreT line of amplifiers becomes an integral part of all wireless network solutions.
Network Compatibility
Cyfre'sT creation of the Digital Microprocessor, combined with licensed Motorola patented technology, have achieved compatibility with the following standards.
CDMA 2000, TIA/E-98-A&D, 1xRTT, TIA/EIA-690 Analog (dual-mode), IS-95-A&D, and GSM.

Cyfre'sT cutting edge technology will change forever the perception all RF amplifiers are the same and deplete valuablde bandwidth from tower management systems. Independent laboratories accredited by the FCC/IC regulators verify all CyfreT claims.

Six Sigma Certification
CyfreT strives for the highest quality manufacturing standards possible. CyfreT products are manufactured under Six Sigma Certified Process Control Standards, far exceeding ISO 9001 and 9002 manufacturing facilities.

Made in the USA
The complete line of CyfreT amplifiers are manufactured in the USA

Frequency Specifications

Specifications TX Uplink/Transmit RX Downlink/Receive

Frequency Range: 824.0-849.0 MHz 869.0-894.0 MHz
1850.0 - 1910.0 MHz 1930.0-1990.0 MHz

Uplink: 824.0-849.0 MHz 1.0W (+30dBm CDMA)*
Downlink: 869.0-894.0 MHz 0.02 W (+12dBm)
Uplink: 1850.0 - 1910.0 MHz 1.0W (+30dBm CDMA)*
Downlink: 1930.0-1990.0 MHz 0.02 W (+12dBm)

Gain: 30dB maximum, variable from +20 to +30 dB

Maximum power measured into 50 ohms at the antenna terminal.

General Specifications

Input Voltage 8.0 VDC - 28.0 VDC
Current draw 100 to 890 MA
RF Input Power 10 - 60mW
Receiver Sensitivity -110dBm (maximum)
VSWR less than 1.9 at the handset connection
Signal Sensitivity -115dBm (maximum)

Temperature range:
Operating -30 C to +60 C performing within specification
-40 C to +90 C without loss of function
Storage -40 C to +90 C

Humidity 85% at +85 C
Impedance 50 ohms

Dimensions:
Length: 5.25 inches - Width: 5.18 inches - Height: 1.06 inches - Weight: 1
.55 lb

RF connector: SMA Male / Female

Tested on the following standards which it meets or exceeds:
IS-95, IS-98, IS-2000, 1XRTT, AMPS, CDMA, TDMA, GSM, W-CDMA, EDGE, EVDO Rev
0, EVDO Rev A

FCC ID: RFK-LMSWDJH819

Hey, now, they've got some fairly nice banana plugs :-)

Also, soldering gear, so they're not totally dead.

Besides, I've never thought of them as a place to buy ham or shortwave
radios -- so I don't miss whatever they don't sell anymore.

Between AES, the Wireman and Mouser, I can get pretty much what I
need.

As you say, if the amateur station is properly installed the wireless
system is stuck. Most of the *stuff* available for home use is pretty
poor when it comes to filtering. Just think what it'd be if they have
some one operating on 2.4 Gig next door.

As a side note, a friend who uses wireless also put in some web cams
along with his wireless phones. Everything interfered with everything
else. He finally put in 5 gig phones and relocated the web cams. He
runs the legal limit on most of the ham bands and has no interference
in either direction. I have a dual, Cat5e gigabit and wireless
router. When used with wireless its antenna is about 4 feet from my
2-meter rig. I can use my 5W HT within a few feet of that antenna and
neither system hears the other.

more than likely some one in his neighborhood has an old TV antenna
preamp up in the attic that is picking up the 2-meter signal and
creating a bunch of harmonics, but that is a *LONG* way above the
2-meter band.

>
>Can't speak to the WiFi issue at all.. but it's notable that most wireless

2.4 and 5 Gig which are also ham bands.

From: Diego Cueva <diegocueva@gmail.com>
Message-ID: <1154031583.410469.113600@b28g2000cwb.googlegroups.com>
Source record: 8229

I found a comment in google groups about changing the crystal in the
Cobra 148 GTL radio

http://groups.google.com/group/rec.radio.amateur.equipment/browse_frm/thread/bdb8f6014aecf
f06/55ae7197545990ad?lnk=st&q=&rnum=3&hl=en#55ae7197545990ad

Plase, I apreciate too much a respose to this questions:

1.- In the comment say:

"...For every 0.150 Mhz increase in freq of this Crystal you will get a
450Khz increase in operating freq..."

QUESTION: What is the minimum operating frecuency that I can reach
changing the X3 crystal ? 25Mhz, 20Mhz, 15 Mhz, 10Mhz, 7Mhz.

2.- About "...retune the Mixer coil..." how I can do that? (an url may
be usefull to read about that)

3.- About "...retune the Mixer coil..." is realated with the voice look
or 10khz steps ? what will be the bad functioning in the radio if I can
not retune de mixer coil.

Thanks a lot

Att.
Diego.

FS Collins 32V-3 AM/CW Transmitter
Cabinet is a primer gray, no dents on cabinet. Its great.
The front panel was perfect until
I had a radio near it and scratched the paint. Its not a grooved in
scratch, just paint came off. If you can match the paint where it came
off, it will look great.
Works 100 Percent and with GREAT audio reports. Has a newer Peter Dahl
Power Supply installed.
I used it for about 7 Months and just recently stopped using it.
750.00 Looking for a local pick up. But if you want to take a chance
on shipping.
You pay shipping and insurance.
But Don't hold me to damages.
Its heavy and can get banged around in shipping.
I can pack well.
ritchi50@optonline.net
ps: picture is on QRZ/Eham/QTH

Marqueer's Message From Hell
"Then he said, I pray thee therefore, father, that thou wouldest send him to my father's house: For I have five brethren; that he may testify unto them, lest they come into this place of torment. Abraham saith unto him, They have Moses and the prophets; let them hear them. And he said, Nay, father Abraham: but if one went unto them from the dead, they will repent. And he said unto him, If they hear not Moses and the prophets, neither will they be persuaded, though one rose from the dead." Luke 16:27-31. Listen to Moses and the prophets:
"Thou shalt not lie with mankind, as with womankind: it is abomination." Leviticus 18:22.

"Hell from beneath is moved for thee to meet thee at thy coming...the worm is spread under thee, and the worms cover thee." Isaiah 14:9-11.

"The same shall drink of the wine of the wrath of God, which is poured out without mixture into the cup of his indignation; and he shall be tormented with fire and brimstone in the presence of the holy angels, and in the presence of the Lamb; And the smoke of their torment ascendeth forever and ever; and they have no rest day or night." Revelation 14:10,11.

Nobody cares. Why don't you just get married in a state that accepts
gay marriage and be done with it? Gay or not, quit crapping on the
newsgroups.

It's getting very old and nobody cares.

3562. Harris RF-2601 remote auto ATU

Source record: 8148

I have the chance to buy a RF-2601 new in its boxes. Can anyone advise me if an RF-2601 and its control unit are a stand alone installation? The data sheet advises it is designed to operate with Harris transmitter. Do they come with an instruction manual? Is further info available? Do you need to pressurise with nitrogen to achieve full specs of 1KW average power.

Of course, the key point that too many miss is that this newsgroup
is for the discussion of amateur radio equipment, not a buy and sell
newsgroup. If that key point isn't part of the complaint, then
that ebay policy would seem to allow it.

Fully agree. It is amazing how so many feel they need to post their wants, sales, auctions here as well as the more appropriate rec.radio.swap group. It is doubly annoying since I suspect almost everyone reads both groups, anyway.

3582. Newbie Question About GMRS Vs. FRS

Newsgroup: rec.radio.amateur.equipment
Date: 2006-08-02 00:36:10 UTC
From: Jeff <Jeff@somewhere.com>
Message-ID: <a5mdnWJc9fAnblLZnZ2dnUVZ_uWdnZ2d@velocitywest.net>
Source record: 8168

I will be buying a Midland Two way radio (18 mile version)

My question is this:

The first 7 channels (1-7) which are combined GMRS/FRS...Do those transmit
at Full power or are capped at half a watt because It's FRS too?

If so, does than mean that channels 15-22are true GMRS at full power?

TIA,

Jeff

http://www.midlandradio.com/owners_manuals.asp seems to be the URL to
use.

>The first 7 channels (1-7) which are combined GMRS/FRS...Do those transmit
>at Full power or are capped at half a watt because It's FRS too?
>
>If so, does than mean that channels 15-22are true GMRS at full power?

The manual for the GXT600/635/650/656 series indicates that the power
output on channels 1-7 and 15-22 can be set to any of three levels.
Channels 8-14 are locked at the "low" level.

The manual also states that a GMRS license from the FCC is necessary
when using the radio to transmit on channels 1-7 or 15-22.

I read this all as meaning that the radio is capable of full
GMRS-level power output on all of the GMRS-authorized channels (the
shared GMRS/FRS channels 1-7 and the GMRS-only channels 15-22).

It's possible that the radio could be used legally on channels 1-7
without a GMRS license, if the power level were first manually set to
the "low" position, but I'm not certain of that.

VENT=ON
Why do so many people refuse to sell to Canada? Amateur radio equipment
crosses the border without any duties. There seems to be some feeling
that we are a strange foreign country. I will agree that we are a
foreign country and maybe a bit different but not strange. We do prefer
to deal with FEDEX or the USPS because UPS often tacks on extra charges
for crossing the border.

I expect that the good folks in Alaska and Hawaii probably feel the same
way because I often see "lower 48 states only" as well.

I am a Canadian with serious chronic health problems and I have much more experience with the health system than I would like to have, I have come close being a silent key several times, I am sure that there are some who feel that is too bad that I was allowed to breed before my medical problems became obvious. In the minds of some I suppose that I have peed in the genetic pool.

I have never heard of a Canadian hospital shutting down because the money did not last until fiscal year end. While there are some weaknesses in our system such as delays in elective procedures but when the sand was running out of the hour glass there was always a system to help me out. Here everyone can get insured, there is an option to opt out of medicare but who would?

Think of the overhead that American doctors face having to deal with multiple insurance companies, each with different forms and procedures. Think of the people who can't get medical insurance no matter what the cost. Think of those who don't have because they can't afford it. And then there are those who exercise their right not have it.

In a situation where people get treated but can't afford to pay, the rates for everyone else must go up to compensate.

Canada is not perfect but it is a pretty nice place to live and we try to contribute as best we can.

By the way, if I were an American I would vote republican but I am not a single issue voter so don't construe that to mean that I from the far right wing. Consider me a fiscal conservative with a social conscience.

Yes, you may use channels 1-7 without a license IF you only use low power. Since that radio has type acceptance for FRS on channels 1-7, it is permitted for license free use provided all provisions of the part 95B regulations are followed.

The license free FRS frequencies are only authorized 500 mW ERP. Exceeding that, you would be operating under Part 95A rules, requiring a GMRS license.

I always recommend getting a GMRS license though. That way, you can use all 22 channels.

Ah.... there is no "GMFS"

Did you perhaps mean "GMRS"?

You need to look up the FCC ID at the FCC website. This will give you the output power. The FCC ID is usually located on the label at the back of the radio.

Typically, manufacturers grossly overstate power claims as well as range claims on these consumer-grade radios. Very sad state of affairs.

Go here to look up what you need:

https://gullfoss2.fcc.gov/prod/oet/cf/eas/reports/GenericSearch.cfm

You will never, ever get 18 miles. The claims by Midland are very
deceptive.

They lie and say they are 5 watt radios, when in fact their power output is
only slightly over a watt. They lie and say they have full legal power,
when in fact power limits for GMRS far exceed 5 watts.

Never, ever is pretty strong. It would take only a few milliwatts
between two mountain tops 18 miles apart. I agree that from a
practical standpoint, that is completely unrealistic, even for a full
5-watt transceiver. I have two excellent GMRS 5-watt HT's, and I'm
lucky to get even one mile in typical terrain. Now, if I had a really
good antenna, that would be a different story.

"six mile radio" is a marketing term. ~500 mw for power output sounds
perfectly plausable for an FRS/GMRS hand held.

You're reading it wrong. The rules limit the power, and there's no
stretching of that. But, the manufacturers can stretch the truth about
the range, if there was a fine print disclaimer next to that range statement
it would likely be under very limited conditions.

Sure, .5 Watt Output, from hilltop to hilltop, can easily span 6 miles.
I have a Part15 Spread Spectrum 2.4Ghz Radio with 100mw Output that
carries 2 ea. T1 Spans (4 Mhz Bandwidth) 16 miles, with 25db Fade
Margins on the link. There are Path Calculation Programs that can
provide excellent information on this issue.

>VERY useful information!!!!! Thnx
>
>But on some reports, power output is expressed as dBm....not wattage

Easy conversion.

(dBm - 30)
Wattage = 10

dBm = 30 + log10(wattage)

30 dBm is 1 watt, 33 dBm is 2 watts, 36 dBm is 4 watts.

>perfectly plausable for an FRS/GMRS hand held.

Agreed. A lot of the less-expensive FRS/GMRS radios have transmitters
which only deliver the 1/2-watt legal limit for FRS. They can tune
to, and transmit on the GMRS frequencies, but they don't do so at any
higher power than than can do on the FRS-only and FRS/GMRS frequencies.

You could almost certainly get 6 miles of range out of these radios,
if their receivers aren't horribly insensitive (which they sometimes
are) and if you have a completely clear line-of-sight between one
radio and the other (think "standing on a hilltop, talking to a guy
who is standing on another hilltop six miles away that you can see
without obstruction."

At ground level, with buildings and trees around, the range is likely
to be on the rough order of a half-mile or even less.

Diego-

I am not familiar with that radio but have modified others to work in the Ten Meter Ham Band.

The various tuned circuits in the radio have a limited adjustment range, probably around 25 to 30 MHz at most. Beyond that, you would need to replace or rewind coils and/or change tuning capacitors for each circuit affected.

1. The X3 crystal is mixed with other signals to achieve the operating frequency. If you change its frequency far enough, other harmonics (Fundamental, 5th, 7th) may be selected. In addition, the mixing process has both sum and difference products present. Moving the frequency far enough, the wrong product could be selected. Either case might produce an unexpected operating frequency.

2. The mixer coil probably has a ferrite core that you can adjust with the appropriate plastic tool. DO NOT use a metal tool. This could easily crack the core, causing it to dig into the coil form as you attempt to turn it.

3. The mixer coil should not be related to the voice or 10 KHz steps. However it might result in a different step size or opposite sideband if adjusted for the wrong product as in (1) above. For small frequency changes such as converting to the Ten Meter Band, not being tuned would probably result in low output on transmit and poor sensitivity on receive.

Impossible to say accurately without actually studying the two radios.

There may actually be significant differences in performance. Or,
there may be no significant difference in performance, and the only
distinction between the "3 mile" and "6 mile" radios was the amount of
nitrous that the marketing/advertising people were huffing when they
designed the packaging materials.

>Does the fact that one is a tiny bigger, an inch longer on the antenna, 4
>AAA batteries instead of 3AAA make one better than the other

Possibly. Possibly not. All else being equal, a radio with more (or
heftier) batteries may have a longer useful run time than a similar
radio with fewer/smaller batteries of the same type. I tend to prefer
AA-cell radios over AAA-cell for this reason, although the AA-cell
type are becoming harder and harder to find.

> or is 500MW
>Just 500MW

To a first approximation, radios with similar transmit power, and
similar receiver sensitivities, and similar antenna designs would be
expected to deliver similar range.

Without actually testing the two models of radio under somewhat-
controlled conditions, and/or tearing them apart, there's no way to
know for sure whether there are significant performance differences.

The thing to remember is that FRS was set up to be a short-range radio
system - the power limit on transmission, and the requirement that the
antennas have no directional gain (above that of a halfwave dipole)
and be non-detachable make it clear that the FCC did not intend FRS to
be a long-distance radio system.

I've only ever seen one FRS radio whose performance was markedly worse
than any other's. It's a cheap little "wear around the neck" model
whose antenna barely protrudes from the case at all... and I suspect
that the short and obstructed antenna is probably the cause of its
poorer range.

Most of the 2 billion cell phones that are in existence in the whole world (yes, 2 billion! US, China, Russia, even 100 million in India, plus everywhere else) put out less than one watt. And, I see cellphone towers spaced, what, ten miles +/- appart all over where I live and most cell phone calls are not over strict line-of-sight paths. Might not be a totally fair comparison, but some food for thought.

Yup. Raw transmit power isn't the only factor. The tower height is
an essential element of this system.

An interesting web page to read can be found at

http://www.firestik.com/Tech_Docs/dist2horizon.htm

It discusses the distance to the visual horizon, as well as the "radio
horizon" distance based on the antenna height (radio waves can often
travel some distance beyond the visual horizon, for a variety of
reasons).

According to the formula in this page, two radios whose antennas are
located 6' above the ground, will have a radio-horizon distance of a
bit less than 7 miles. At any distance greater than that, the Earth's
surface will block the direct path between the two radios, and
reliable communication (on FRS/GMRS and other UHF frequencies at
least) will probably be difficult or impossible. Add in the effect of
ground clutter (buildings and trees blocking the direct path and
generating reflections) and you end up with a much shorter useful
range.

Raising one radio up onto a building or hill greatly increases the
transmission distance, for at least two reasons - it gets one radio
out of the ground clutter and it increases the radio-horizon
distance. With one radio at 100' and the other at 6', the radio
horizon distance extends out to more than 17 miles.

The horizon distance and the presence of ground clutter often make
more of a practical difference than raw transmit-power level. Going
from 500 milliwatts to 5 watts is a 10:1 increase, which works out to
a clear-line-of-sight range increase of around 3:1 - but if the other
guy is over the radio horizon, you may not actually get any better
communication using the higher power.

Between the input on this forum and links that i'm pointed to, wow.

So, questions, in no particular order.

Can a licensed FRS/GMRS radio with a fixed antenna be modified so that one has an external on therir roof higher up? Or two cars in a convoy with a CB type whip antenna connected to these 2 way radios.

How much power does a cellphone put out ?

can a 2.4 GHZ/ 5.4 GHZ wirless phone be modified with an external antenna on the base?

Thnx

jeff

>has an external on therir roof higher up?

No, not legally.

Making any modification at all to an FRS radio, immediately voids the
radio's certification for use on the FRS frequencies, and it becomes
illegal to use it to transmit on those frequencies.

The FCC rules on FRS radios specifically state that antennas on these
radios may not be made removeable.

Some years ago, Radio Shack (or their OEM) figured out a cute way to
work around this restriction. They built FRS radios in the form of a
magnetically-mounted "puck" with a fixed whip on top, which were
intended to be mounted on the roof of a vehicle. A cable ran back
inside, with a speaker-mike on it and (I think) a cigarette-lighter
plug. Because the radio itself was on top of the vehicle, and because
the antenna was permanently attached and didn't have directional gain,
the radio was within the rules and did receive FCC certification.

I don't think RS has sold this model for several years, and I don't
know if a similar model is available anywhere else.

The rules are different for GMRS. I believe that it's possible to buy
radios which operate only on the GMRS frequencies (they won't transmit
on the FRS-only frequencies) and which have plug-and-jack antenna
connections. You could put a whip antenna on your roof, if you use
this sort of radio. You would have to have a proper GMRS license to
do so.

> Or two cars in a convoy with a CB
>type whip antenna connected to these 2 way radios.

Again, this is possible with GMRS-only radios, but not with FRS-only
or dual-mode FRS/GMRS radios.

>How much power does a cellphone put out ?

Which cellphone? :-)

Typically it's a few hundred milliwatts on average, if I recall
correctly.

>can a 2.4 GHZ/ 5.4 GHZ wirless phone be modified with an external antenna on
>the base?

It's physically possible, but it's very probably a violation of FCC
rules. Making any "in the field" modification to a Part 15 device
will void the device's certification, and it becomes technically
illegal to use the device to transmit.

A meta-suggestion: if you're interested in using radios which can
have more power, more available frequencies, and a lot more
flexibility for modification and antenna selection and mounting, and
if the intended application is not commercial/business use, why not
buckle down and study a bit and get yourself (and others in your
group) tested and licensed as ham radio operators? The test isn't
difficult - quite a lot of people pass it after a one-day cram
session, although I personally recommend taking a few evenings to read
through the material and really understand the background - and the
usual VEC testing fees for three or four people would come to less
than the cost of one GMRS license.

Interestingly, my wife is also a Canadian, she moved down here to the US just before we got married. She worked only part time in Canada. Aparantly, the health care is NOT universal, as many meds she needed she had to pay for out of her own pocket, and had to wait months for an MRI (She just had one here on one weeks notice). Yup, there are issues here too, but the Canadian system is far from perfect either.

Specifications with communications distance in them don't mean crap. I
have talked over 90 miles with a 2M 1 watt HT, (Alamagordo to El Paso).
Terrain is everything.

There are delays I will admit that. Universal means that everyone can
participate it, it does not mean that it covers everything. I also have
private insurance to cover drugs, dentistry, the surcharge for private
hosptital rooms etc. I guess that I got really ticked off when the guy
said that hospitals routinely close because they run out of money, that
was bull and it really ticked me off. Please excuse my sensitivity.

Does anyone on here know how to creat a non standard split on this
rig? I dont have a manual. Its already MARS modified for outside
the ham freqcys I just cant get a wide split for AFMARS.
Like 143.50 (rcv) and 142.150 (up). The +/- 600 works fine
either in the bands our out side ham band limits. Wish I had
some feedback on this.

He actually *is* right. That radio has an ERP of .17 watts on GMRS and .13
watts on FRS. Uniden is notirious for putting out woefully weak radios and
inflating range claims.

Maximun licensed power for a Cellular Subscriber Unit is 3 Watts.
The Cellular Radio Service has an Adaptive Power Feature which
means that the Power Output of the Subscriber Unit is set by the
Base Station and determined by the signal level of the Subscriber
Unit at the Base Station.

I did not find the power level. Generally the .5 watt FRS are
advertised as 2 mile. 2 watt would be 4 miles. 4 watt would be 8 miles,
and 8 watt would be 16 miles. This just equates to signal level.
I bought a set of the lower budget units without the volume knob.
I was sorry. One feature I do not like, when it scans, it only locks onto the
channel for so long, then it continues to scan. There is no option in my unit to change
this.
I have gotten 4-8 miles on my FRS, not much of a problem line of sight.
They go over a hundred miles under optimum conditions.
It would be better if the GMRS and FRS units came with longer antennas,
of course the FRS transmit power would have to be decreased in that case.

I used to measure field strengths of my old FRS radios. A lot
of variation seen.

The old block cell phones had up to 3 watts, the new ones you hold in your hand are only a couple hundred mW at best. If they were capable of 3W output, those batteries wouldn't last 2 minutes. Looking at one of the high output batteries for my phone it says 560mAH. 3.7Vx.5A= 1.35W for one hour. That includes the power gulping digital electronics, the display, the audio output, etc. The battery lasts about 4 days making perhaps 2 calls a day.

Your math is off a bit.

From your starting point at 0.5W and supposing 2 miles, to double the range to 4 miles would require 2.0W (4x the power to double the distance). To double it again would be 8.0W for 4 miles, then on to 32.0W for 8 miles. This is based upon free space loss only, from point to point line of sight with no obstructions. There is a bit more loss to be computed in for atmospheric losses at 460MHz.

The FCC website
http://wireless.fcc.gov/services/index.htm?job=service_home&id=family states that FRS radios running at 0.5W have an effective range of less than a mile.

3625. Circuit or chip single channel 250 MHz very low power transceiver.

Newsgroup: rec.radio.amateur.equipment

Source record: 8111

I'm a USAF Rescue pilot looking for a simple, single channel very low power AM transceiver in the 225-300 MHz range.

The use is for a training aid for a digital data burst communication device that plugs into aircraft radios and uses their transceivers.

This way aircrew can sit around a table and practice with them instead of having to use aircraft.

I am sure the defense contractors would want a thousand bucks a pop. Hell they charge $600 just for cables.

I know that you can get transceivers in a single chip now, so the engineering sure is simpler than it used to be, but I am clueless as to where to look.

Thanks.

If you don't care about the specific operating frequency, you might want
to look at the FCC Part 15 low power transceivers being sold for garage
door openers, etc. NUTS and VOLTS magazine has several vendors of these
devices being marketed for robotics and short range data. Many are AM
type around 315 MHz. Complete transceivers can be obtained very cheap
because the use monolithic SAW devices. But if you need to interoperate
with a regular A/C radio in that band, you will have to roll your own.
Is there a "big" market for these?

No. You posted to Usenet (several groups, in fact), so it is your
responsibility to check back with those groups, and get your answer that
way. 'Hit-and-run' posting, in the form of asking someone to E-mail the
data to you, is downright rude.

With that said: If you're capable of posting to Usenet, I would
wager you're also capable of using the public licensee search on the
FCC's web site.

http://makeashorterlink.com/?F5E02448D

Happy researching.

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.ourmedia.org/node/250909

Topics discussed in SolderSmoke #28:

-- SPRAT Cermaic Oscilator article
-- Tin whiskers and lead free solder
-- QST's $50 rig design challenge
-- Class C amps: Saturation required?
-- Solder Smoke's LOGO DESIGN challenge
-- FB QSO on 20 DSB with SM4FQW
-- Slow Speed QRP (QRSS)
-- WebShots, YouTube
-- MAILBAG: K8WDE, KA6VKP, WB8ICN, VK2KYP
KK7CC

Listen at: http://www.ourmedia.org/node/250909

Background:
Tired of listening to Led Zepplin or NPR on your
I-Pod? Wouldn't you like to be able to carry with
you the kinds of ham radio conversations that you
listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in
London, England meet regularly on the ECHOLINK system
to discuss their homebrew radio projects. We are
making them available as PODCASTS.

NEW RSS FEED: You can subscribe to the program, have
them downloaded to your MP-3 player, and listen to
them at your convenience. To subscribe, just cut and
paste this URL into your I-poder (or similar)
software. We've been having trouble with our Ourmedia
RSS feed, so Mike (software wizard that he is) has
homebrewed his own RSS feed. In order to subscribe to
SolderSmoke, point your podcast software to:

http://kl7r.ham-radio.ch/soldersmoke.rss

If you don't have an MP3 player you can just go to the
site below and listen to the latest program (and
earlier editions) using the audio software on your

computer.

http://www.ourmedia.org/node/250909

Here's the homepage for our show. All our programs are available here. There is also a blog and links to some of the sites and documents we've been discussing: http://www.ourmedia.org/user/36170

We hope you enjoy the program. Please send us feedback.

73 from London

Rare, hardly, they can easily be found. New, old, even WWII new in the foil.
Like the other EbayTard that had a 1968 Evinrude advertised as 'Rare'
and wanted $2900!!! The motor wasn't even worth $300.

3637. FS: Lowband, 10mtr, 12v charger etc.

3653. Legality of modifying a ham radio to transmit on commercial frequencies

Newsgroup: rec.radio.amateur.equipment
Date: 2006-08-07 16:51:37 UTC
From: Alex <samalex@gmail.com>
Message-ID: <1154969497.639356.284120@m79g2000cwm.googlegroups.com>
Source record: 8139

Hello,

I'm new to amateur radio, and there's a debate amoung some of my friends on whether it's legal to modify a ham radio to transmit on commercial and CB frequencies. I thought any radio that does transmit on these non-ham frequencies needs to have some type of FCC cerification, so modifying a ham radio to transmit on such non-ham frequencies would be illegal. However, some friends have told me it is legal to modify a ham radio to transmit on non-ham frequencies as long as you are authorized to use them and you transmit on those specific frequencies and on the allowed power.

At my work we have been allocated to use specific frequencies which are commercial and not within the ham frequency range, and I thought it would be illegal to modify a handheld ham radio to transmit on these frequencies. Am I correct?

If so, can someone point me to a website, whether on the FCC's site or ARRL's site or someplace else that shows this? Again, I assumed it was not legal to use a modified ham radio on such non-ham frequencies, but I've heard from others that it is. Just wanted to clear the air.

Thanks --

Alex

In a word NO ... They would not be Type accepted for those frequencies.

We however CAN modify commercial equipment to run on Amateur Radio
Frequencies as
long as they conform to requirements.

Amateur radio is almost unique, in that the rules are intended for
experimentation and thus pretty open. Pretty much all the other radio
services have quite limiting rules, and yes, one of those is about
the radios matching very specific standards.

Hence, no one cannot used modified equipment in another service. Indeed,
modifying a piece of commercial equipment for another service is likely
to make it no longer useful for that service.

What seems like an obvious exception, using ham gear for MARS (and CAP
if that still happens) is misleading. Because both services allow for
amateur equipment to be used on those frequencies, the whole point being
to make use of the existing pool of ham operators. Certainly MARS,
and I think CAP, used frequencies adjacent to the ham bands so it
was easy to use the same equipment. Decades ago, hams often had
receivers that had a bit of extra tuning range that would take
in those adjacent frequencies, and the transmitter could be shifted
simply by changing crystals. This has changed as ham equipment
has changed, so an actual modification is often required to take
in those MARS frequencies. But that is just an opening up of the
coverage.

Of course, modifying the other way works fine. Plenty of CB radios have been put to use on the ham bands after modification. But noteworthy is that once that equipment is modified, it's no longer suitable for its original use, and I believe the rules are such that even putting things back to normal is not good enough.

Michael VE2BVW
